420704-73

Nannus hiemalis pacificus

Coloptes cafer cafer. Not extremely common, quite a change from the situation here.

Selasphorus rufus.

Phalacrocorax auritus auritus

Ardea herodias hyperonca. These 2 were flying over Cannon Beach (the town) and constituted the only ones I saw.

Junco oreganus oreganus. Heard on the hike into Short Sands Beach.

Wilsonia pusilla chryseola. Perching on a telephone wire about 15 feet over the salmon berries.

I also heard on both days a kinglet and the chickadee. I suspect the Golden-crowned kinglet (Regulus satrapa olivaceus) and the Oregon chickadee (Penthestes atricapillus occidentalis) but I could of course be wrong both times. At times such as that I found that positive identification was ~~high~~ impossible for me. Note. I have not yet developed a great taste for salmon berries though red huckleberries were there to take and taste out of my mouth.

7/10/42

Spent the evening at Lacamas lake with personel of Barnes General Hospital. Observed the Aix sponsa and Ardea herodias fannini in late twilight.

7/12/42

Utilized Sunday afternoon in Columbia Gorge. Stopped at Lacamas Lake for an afternoon of canoeing. At hospital at Vancouver, east woods, recorded the following birds.

Passer domesticus

Myiochanes richardsonius richardsonius

Dendroica auduboni auduboni

Junco oreganus shufeldti

Pachycineta thalassina lepida

Thryomanes bewicki calophonus

Zonotrichia leucophrys pugetensis

Empidonax traillii brewsteri.

Turdus migratorius caurinus
