↘ [note change of field number system for specimens] 380610-111

9— (650 J.B.) Peromyscus. On talus slope above river bottom under protection of rock. Igneous and sandstone rocks comprised the hillside association with rabbitbrush between slope & river bottom. 60' from water 8' up hillside.

10. not visited. Slope of lg & S.S. boulders bordering wooded section of willow as above. No vegetation except shadscale (?) and a few sparse bunches of grass. Chrysothamnus fringed the contact between river valley and slope. Slope within 100' of creek and 100 from massive s. s. ledges above. near sheds & human habitation with dogs, pigs, sheep & cattle ranging frequently here.

George caught one Bufo woodhousii in trap along creek edge. He set along side of me but on creek edge while I work 20' back from edge and on hillside. The catch of last night will be of low percent animal catch.

Returned to camp and while eating breakfast a ♂ & ♀ Bullocks Oriole lit in cottonwood tree at camp. The ♀ seemed to be the more aggressive of the two and was followed by the ♂ in its feeding habits. When the ♀ flew from the tree, the ♂ followed closely. The orioles began to sing quite early in the morning, long before daylight.

Says Phoebe continuously calling at this time of day.

After breakfast George and I left camp to collect birds & animals Followed along the upper irregation canal on the west side of Fremont canyon starting in back of Chestnuts home. Followed to source of canal water then to last cultivated field in canyon just before narrows, hence diagonally up north hillside to top of plateaus, hence down slope toward Fruita & camp across igneous boulder and pasture bench land & then dropping from this elevated valley floor to camp again. Specific observations of above trip.

8:25 A.M. Left camp. While walking from camp to upper irregation canal saw the Robin, B. Oriole, yellow warbler, Says Phoebe, English Sparrow, and a Bufo woodhousii on rocky hillside but damp ground 100' from running water.

8:30 Swift flew by & G.T. Towhee seen in brush

8:45 Collected ♀ Goldfinch (652 J.B) along upper irregation canal. She had been calling and flying about the cottonwood & brush hillside
