18. Uneffected. Base of Ponderosa Pine.
22. " " " " "
23 (827 J.B) By side of rock by Ponderosa tree.

All traps on a linear line 80' long on hillside with Ponderosa pine approximately 40' apart. Boulder scattered about and 70' soil. Pine needles covered ground with oak patches at edge of stand. Have noticed on several occasions that the aspen trees and oak do not enter the Ponderosa pine but about up to edge of stand only. Ponderosa groves are generally found as pure stands. Back to camp and set up for skinning. Western Evening Grosbeak flew by calling at Posy lake Camp at 8:40 A.M.

(827 J.B) Peromyscus. Skull fractured & destroyed.

Length	155 m.m.	
Tail	69 m.m.	adult ♂
Foot	19.5 m.m.	
gr. wt	22	

(828 J.B) Peromyscus. Skull only.

Length	148 m.m.	
Tail	65 m.m.	♂
Foot	20 m.m.	
gr. wt	16	testis 7. m.m.

(826 J.B) Peromyscus. Skull only.

Length	162 m.m.	
Tail	73 m.m.	♂
Foot	19.5 m.m.	
gr. wt	25	testis 10 m.m.

(825 J.B) Eutamias adsitus. Embryos just forming.

(829 J.B) Wilmer collected Utah Jay at Posy Lake on west hillside, 50' from lake shore on aspens. When first seen flew from lake shore into aspen trees. Testis measured 5 m.m.

Wilmer Tanner collected a Sciurus fremontii at the N. West end of lake and he prepared it for his collection of mammal at Provo. High School. His collection number for this mammal is 96 W.T. measured:

Length	345 m.m.	
Tail	134 m.m	adult ♂
Foot	51 m.m	
wt. gr.	24.5	

Fay Porter of Escalante and Mayor Schow dropped into camp. Mr Porter is the son of the man from which Posy lake has received its name. Mr. Andrew Porter, father of Fay, ranched this area at one time and during the times he spent along the Colorado river he made many contacts with the Indians.
