AULACORAMPHUS CASTANEORHYNCHUS. *Gould.*

Gould & Richter del. et lith.
Hullmandel & Walton, Imp.

AULACORAMPHUS CA

Chestnut-l

SPECI

Aul. rostro castaneo-rubro; mandibulâ in
latis; vittâ basali stramineâ; uropyg
tincto; caudæ rectricibus quatuor inte

Crown of the head and upper surface
four middle tail-feathers deep bluish
mainder green; all the under surface
chestnut-red, becoming paler towards
lower mandible and along the culme
of straw-white, which increases in br
Total length, 19 inches; *bill*, 4½; *wing*, 5

Pteroglossus (*Aulacorhynchus*) *castaneor*
p. 238.

Of the grass-green Toucans to which the ge
species is by far the largest yet discovered. T
own possession, which are somewhat smaller
Derby. The *Aulacorhynchus castaneorhynchus*
of the latter, together with the darker colou
stinctness.

The present species appears to be strictly
been sent to Europe in collections from Santa
respecting it.

The figures are of the natural size.
