

Aug 1, 1994

violet-green swallows (young), left nesting box today and site now abandoned.

Decided increase in wasps at hummingbird feeder.

Last three days groups (18, 27, 28) glaucous-winged gulls feeding in N Lopez Sound between Bee House and Leo Reef. Associated with the above groups were 4, 7, 8 rhinoceros auklets. When auklets finish at a feeding site they move on as a group, swimming but not fishing to a new area. The glaucous-winged gulls then disperse and become generally dispersed in sand until another feeding area is found by the auklets.

8:00 P.M. rufous hummingbird at feeder, sugar down $1/16$ " since A.M.

Aug. 2, 1994

1 pileated woodpecker from N to S thru conifers E side parking area Lopez Island ferry Terminal. Trip to Orca.
5 young glaucous-winged gulls and 3 parents on ^{top} dolphin 5 side ferry terminal at Shaw Island, approx size of human fist. Two others on top main from of terminal size $3/4$ adults.

Aug 4, 1994

Hummer (rufous) at feeder Bee House, ^{P.M.} sugar level not changed. Last observed this summer.

Aug. 6, 1994

Harbor seal on piers:

Leo Reef 26.

no other seals in area.

Leo Reef Rock no. 9 2

" " " " 11 2

♀ mule deer at Bee feeding area at 12' away, stamped front feet and gave a muffled snort each stamp. One wonders if this behaviorism is for recognition rather than for aggression.

a large ♂ mule deer displaced (off porch) 3 5gal buckets of firewood (for no good reason). Same deer tried to open metal trash cans on lower parking area.

Aug 11, 1994

84 Bonaparte gulls in sound between Bee House and Leo Reef. First Bonaparte gulls this summer. They remained in area all day.
