

and observes the white Crown Sparrows, associated with the conifer forests he feels as if he were in the Canadian or Hudsonian zone and being only at sea level.

7-6-39
Left Anacortes and traveled to Bellingham Washington where we visited Mr. & Mrs. Fowler, Mrs. Fowler is a sister of Milo's mother. Just south ^{west} of Chuckanut in the Chuckanut bay, collected representative shells on the beach. The bay has been cut off by a rail road filling and leaving only a small bridge in which the tide waters enter the bay proper. Milo lived and worked near here in a Cannery and found many friends and relatives. The picture no.

1-7-6-39 shows the bay with the logs and trestel in the background. The size of the logs can be compared by the size of Cub and Ray in swimming. These logs are

continually being brought into the saw mills. One cannot drive anywhere, it seems, without running into great booms of logs and mills running full force. When the timber resource is exhausted I'm wondering where they will turn next.

1-7-6-39

All sizeable logs are cut and smaller timber is being utilized

Took picture 2-7-6-39 of Helen Wakefield and Barbara Fowler on the shore of Chuckanut Bay.

Helen is the daughter of Milo's brother while Barbara is the child of Mr. & Mrs.

10-7-6-39

Fowler's son. Both took at Chuckanut bay. Mrs. Wakefield presented me with a nice specimen of a sponge 3-7-6-39 and a specimen of some type of aquatic plant which was 4-7-6-39
