It appears as if the Peromyscus were out first.

measurements and preparation of mammals from research area A-8-12-39 at 5:30 A.M. inspection.

- (1-8-14-39) Onychomys 127-38-19.2-23gr. ♀ uterus normal trap 121
- (2-8-14-39) Dipodomys 256-153-39-58gr ♂ testis 4.2 m.m. Around the penis and anal region was a brown discoloration of white fur. Skin colour patterns distinct underneath. trap 22
- (3-8-14-39) Dipodomys 230-122-39-53gr. ♀ uterus normal. Had sarcobatus leaves in mouth pockets. trap 18.
- (4-8-14-39) Peromyscus 147-60-20-20gr ♀ uterus normal. trap 71
- (5-8-14-39) Peromyscus 161-71-20.5-20gr ♀ uterus normal trap 82
- (6-8-14-39) Neotoma 270-116-32-110 gr. ♀ uterus normal trap 77
- (7-8-14-39) Reithrodontomys 148-73-17-12gr ♀ uterus normal trap 124

At 2:00 P.M. took gun and went directly north across the main valley to the low conspicuous white formations. Not to be confused with those at N.W. direction. Collected a antelope chipmunk (8-8-14-39) from the largest white outcroppings. It ran to edge of Neotoma ledge and paused for a second or two. Another one was observed about 2 blocks east of here in another group of these outcroppings. This one was surprised and did not present itself again. Wilmer & I collected a Crotophytes collaris baileyi on first slope of mountain. Wilmer saw it yesterday in same position on sunning rocks but left and ran 50' up sidehill to ledges. It no doubt controlled this area & had it hole in ledges above. Today has been
