

- 23. 11 feet from no 22. Damp, tall grasses - super saturated soils
- 24. 6' from 23. Ibid
- 25. " " 24. "
- 26. 6' from 25. Ibid
- 27. 10' from 26. Ibid
- 28. 6' from 27. Dry soils at base of aspen at entrance to hole. Typically boggy surrounding.
- 29. 10' from 28. Base of slump near H₂O
- 30. 30' from 29. Damp, short grasses, outlet channel for bog area
- 31. 10' from 30. Ibid except standing H₂O.
- 1c. On island made by two separated streams of main canyon stream traps placed 10' apart. Damp, short grasses.
- 2c. Ibid
- 3c. Ibid
- 4c. Ibid
- 5c. Ibid
- 6c. In willow
- 7c. In willow.

Inspection of research area A-8-29-39 at 5:00 P.M. The weather of today may show why insects depredations were so effected. Shortly after sun up the clouds began to collect and form above Tampnogas, the type of clouds that appear like usual as contrasted with the cumulus type. These increased until 5:00 P.M. when the solid clouds that had formed became thinner & perforated with blue spaces. About 10 miles to the east the sky clear. Wind very strong and erratic. Clouds moving regularly to the east. Temperature 5:30 P.M. = 66° F.
