

- FIELD NOTES 1940 -

1-4-40

This evening as well as evening of last has been excessive-ly foggy with unusual amount of precipitation and moisture in the air. The atmospheric conditions of the air reminded one of the damp, foggy conditions of the coast. Snowed and rained after this surge. These effects are just one of many abnormalities that has ushered in this season. But as I have ever observed.

1-9-40

While ramming at B.Y. University observed several hopless bugs on the window sill of a south exposure. Have observed the recurrence of the insect on several occasions this winter.

1-12-40

Picture 1-1-12-39 from Campus showing Bonnielle terrace. Snow conditions ideal to illustrate this slope line. In the afternoon of the same day Dr. S. E. Beck, Harry Chandler and I drove down to mouth of Gros River. Picture 2-1-12-39 indicates the resistance of one willow tree to the invading sheet of ice. One immediately
