

Third Aspection trip to Provo River flood plane (see report which is now accumulating at a further date)

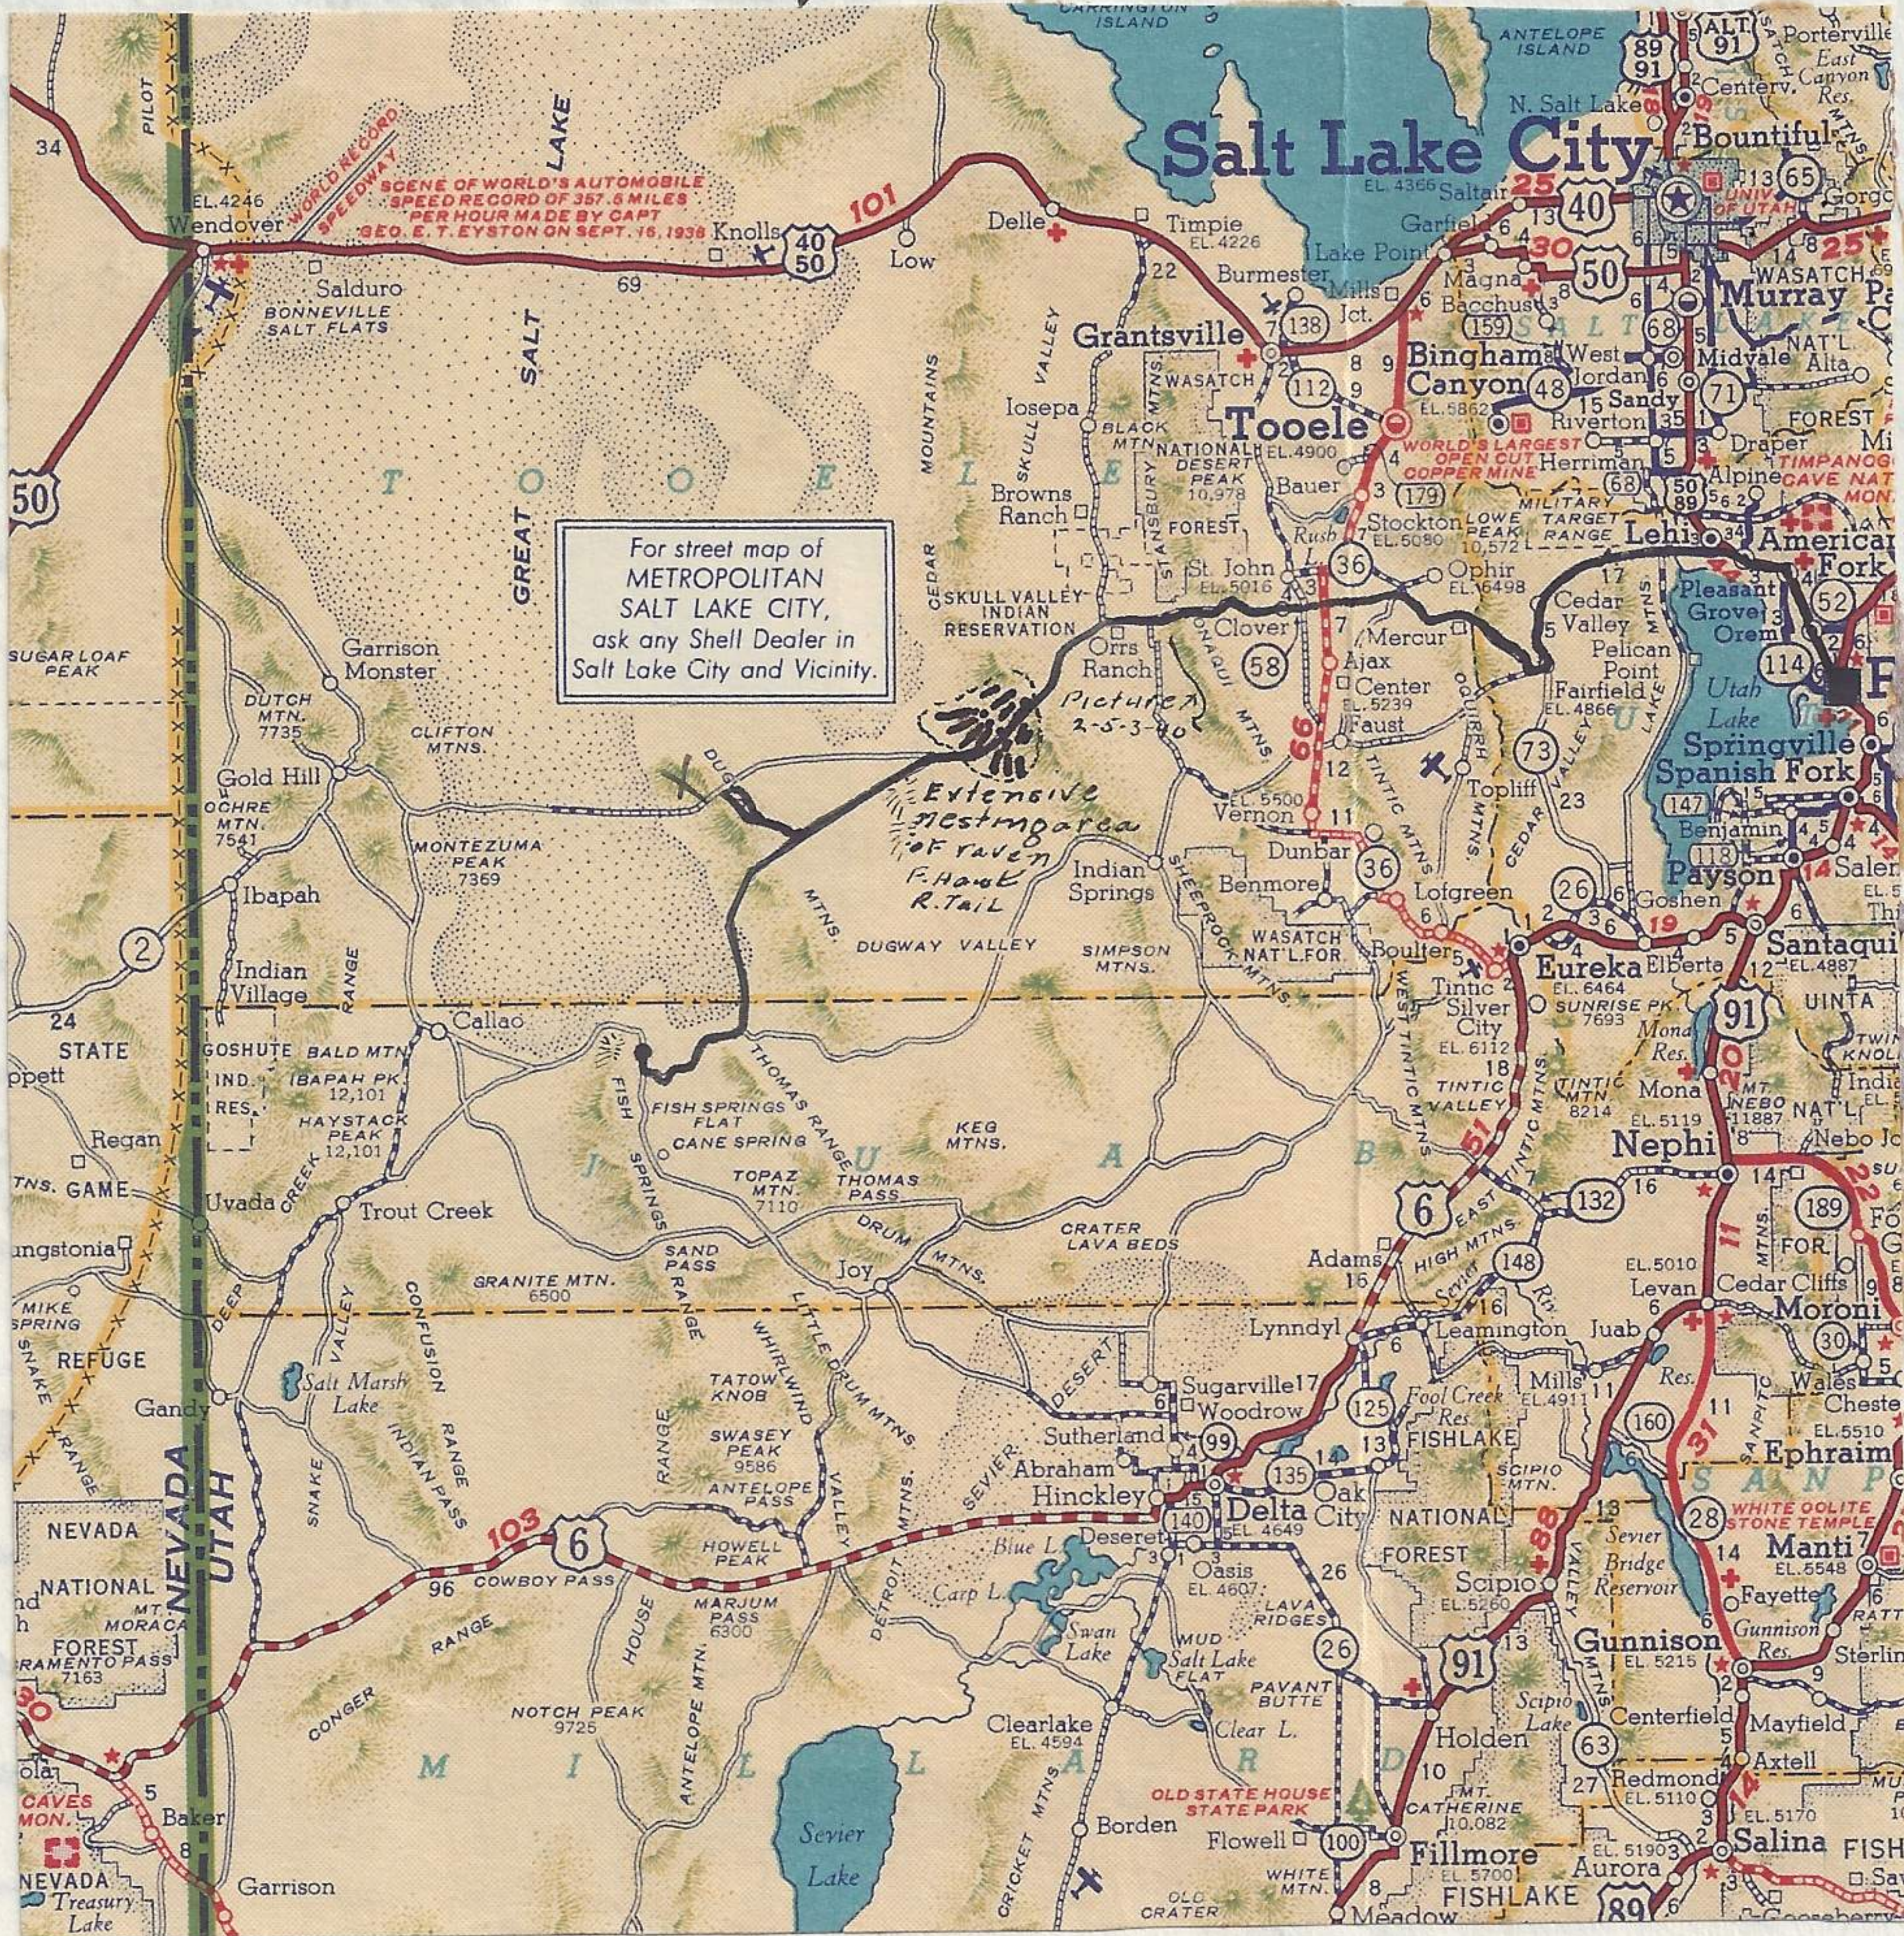

(see previous pages for 4-29-40 and 4-30-40)

5/2/40

Western Evening Grosbeaks still in evidence. Great numbers of small birds and warblers migrating through.

5/3/40

Trip to Fish Springs in quest of the sandhill crane. Fish springs is located just south of the Juab-Toolele County line. The purpose of this trip was to photograph and collect a set of Sandhill Crane eggs. Planned to record on route the percent frequency of birds and mammals and to indicate plant distribution in moving west from the Wasatch front. Will indicate time and species or observations as we travel along. These observations will be specific but one can hardly include or receive true picture because

as we stop at different points one hears and sees many other things not observable in riding by in a car. However the more verdant forms are readily observable. One should really walk to get the truer picture. Left Provo and arrived at Delta to pick up Mrs & Mrs L. Buddy Hatch up and Max Wilson. Left Delta at 7:25 A.M and recorded birds seen from Delta to Jordan river. They

are as follows: 2 English Sparrows, 2 Calif Gull, 2 meadow lark, 1 mourning dove, six mallards, approx 150 Bank Swallows 2 Red-wing blackbirds and 2 brewers blackbird. Arrived at Jordan river at 7:25. 7:26 Phoebe, 7:27 meadowlark and English Sparrow. 7:28 Mourning dove and English Sparrow. 7:29 Immature Citellus t. mollis about 1/3 adult size. 7:42 one horned lark. 7:42 Arrived at divide of Utah Valley & Cedar valley on
