

level from 400628-110 to erosional gulch with continuous snow
below its forks. ^{7:55 A.M. came} *Citellus armatus* calling. 8:07 A.M. Saw 5 *Citellus*
armatus but they did not call as usual indicating that a census
by calls alone will not give true population picture. 8:08 A.M. *Citellus*
armatus. The gopher diggings are generally distributed with some
inhabiting the rocky soils. Their diggings and core are nothing more
than small rocks. 8:12 A.M. at rock slide. Pika called on approach
but was not associated with the slide proper. 8:13 A.M. 4 *Citellus* at
different points. 2 chipping sparrows. Arrived at divide into cirque
no 1. on ridge between cirque 1 and 2 at 8:16 A.M. This divide
is used by deer in crossing. On the west side of this divide and
below can hear the Clarke Crow, 2 robin, 2 chipping Sparrow
chickadees, flicker, Aud. H. Thrush and 2 *Citellus*. The Clarkes
Crows are in evidence at all times. 8:20 A.M. while still at divide.
Can hear the marmot calling from base of rock slide of 8:12 A.M.

This animal did not call until I had crossed the cirque
and had been at divide some time. Observed a grey-headed juncos
chase a Clarke Crow. Utah Jay. Leaving divide at 8:22 A.M. to
Pinus flexilis just off knoll and a couple of hundred feet east of
Pass. This magnificent tree is ideal point for observing the head
of cirque no 1. From this point can hear several pika and
marmot directly below to the south in the talus and moraine
accumulation. They did not call very frequently. The ~~nuthatches~~
nuthatches calling from high on peak bordering south wall of
cirque no 1. Heard Solitaire sing which possess a song much
like the robin or grosbeak. a few bluebirds flying about the cirque.
and pair of ♂ and ♀ near. Rock Wrens in talus below and calling.
Hummer passed. Chipping Sparrow on both sides of cirque.
W. Cr. Sparrow singing. Bees, butterflies and insects in general numerous.
Rocks frequently being dislodged from south peak. The head of Cirque
no 1 at Rock Canyon divide streched with erosional gullies but none of
them over 1/2 foot deep. To the east can hear flicker calling and
drumming as well as several Aud. H. Thrush. The thrush are also
singing high above perpendicular cliffs on south peak. Siskin flying
by. Grasshoppers active. *Citellus* not very active. From the base
of this lone *Pinus flexilis* left at 9:00 A.M. and dropped down into cirque
and hence advanced at a leisurely gate to the east through this cirque
no. 1. Before leaving, however, for the head of this cirque. no 1
followed N.C. along medial ridge between cirque 1 and 2 for a short distance
to point where it drops abruptly. Left for this trip at 9:25 A.M. The
Blue Penstemon dominant flower. Found a good camp spot being flat
and protected on all sides by conifers with vantage points in any direction.
On the first knoll found 5 fresh deer beds. On 2nd knoll to east and
checked one found 1 deer bed. 1 buck left here and ran down S.C. 3/4 of
