

Audubon Warbler. 1:05 jumping off place just <sup>400630-121</sup> SW of long conifer on  
knoll. Continued down Canyon and arrived at Coral at <sup>last</sup> flat  
knoll in Canyon at 1:23 P.M. Started to rain 1:55 thunder cloud  
arriving from the south. It passed over in typical manner and  
just to the west but received good rain & hail. Trail brushy &  
decidedly wet. At Guard rocks (cliffs) at mouth of this Canyon & then  
dropped over into next canyon draining Provo Peak Cirque. Continued  
down to confluence of this canyon & the one I had been following  
down first. The seasonal gulch is about 14' high and one  
finds it difficult to get out of it from here down to flats.  
at flats at crossover left gulch at 2:33, hence down to first  
left hand fork of Rock at 3:00 P.M. hence to mouth of rock at  
3:30 P.M. In rock canyon found the dragon flies in abnormal  
numbers and completely filling the air. Eagle flying around  
eagle cliff & nest on south side of canyon at top of Mt. The  
growth in rock canyon at flats is coming back in grasses  
and underbrush since sheep exempted. Old obnoxious weeds still  
at base of newly farmed grasses, but gradually being replaced.

Picture (2-6-27-40) inserted at this  
point to show returning trip of  
upper Cirque. Taken about 6:00  
P.M. from head of Station ridge on  
the 27<sup>th</sup>. The recordings of this  
trip, as a whole, are more or less  
specific but generally during end  
of each day side trip they become  
selective to a certain degree. Notes  
are so recorded that summary can be made directly from  
them, as to numbers and lists. Printing poor on pictures in report.

Palmyra Park in Diamond Fork Canyon.

7/6/40

Drove up Sp. Fork Canyon to Diamond Fork to Palmyra Park.  
Observed 2 *Citellus lateralis castaneus* (one with something in  
its mouth) running across the state highway about 8 blocks west  
of Castella at mouth of large canyon from Looper Mt. They ran N.W.  
1 *Citellus v. utah* at mouth of Sp. Fork. 2 *Cit. v. utah* 2 blocks  
up Diamond Fork Canyon. at Palmyra found 8 mt. hawks  
in the air above grove at one time. Elevated cross-annual flow  
levels conspicuous & numerous. <sup>forms of</sup> *Polun*, *Song Sp.*, *Thunder*,  
*cottontail*, *laguili* <sup>present</sup>.

mount *Timpanogas*.  
Mary and I made circuit trip on Timpanogas commencing at  
Timpanoke Basin, hence up regular terrace trail to Am. Fork Cirque,  
from base in upper American Fork Cirque made lateral side trip  
to west ridge and north terminal, hence to Emerald Lake and  
Hidden Lake Cirque, hence down regular trail to Aspen Grove. Entire  
stay in mountains 2 night and 2+ days. Our grub consisted of  
food to supply 1 sack lunch, 2 breakfasts, 1 trail lunch and 1 supper.
