

on sidehill ⁴⁰⁰⁹⁰¹⁻¹²⁸ and fearless. From near here took picture no 1-9-1-40 of the abutment above Emerald lake and the west side of the glacier canyon with its perpendicular wall of limestone. The glass house can be seen on the negative of this picture but not included in this picture. Left lake at 8:25 A.M. near the lake saw a *Citellus l. castaneus* and some pika. It was a rather peculiar thing but the only *pe* marmot observed or heard on the entire 3 day trip was seen at the base of the talus in picture no 1-9-1-40. They no doubt are in early hibernation or late aestivation. At the bank of the Hidden Lake Cirque took a

silhouette picture of Mary no. 2-9-1-40 looking down over the terraces leading down to aspen Grove. mt. Elk Peak on right. Left Hidden Lake Cirque at 9:00 and arrived at Lecture ledge at 10:00 A.M. Stopped at the main fall (2nd one up canyon) where we paused for an hour to partake of its eloquent beauty and refreshing spray. The temperature of the water at base of the falls was 48°F while the water from the numerous springs from the sides 20' from pool of falls recorded a temperature of 40°F . Rather than wait at aspen ^{Grove} for the family to arrive we chose to remain here until 11:00 o'clock. While we tarried here we posed a picture 3-9-1-40 with Mary by the water falls. This falls to her is bridal veil falls in lue of the fact that she was to be joined in matrimony in the near ^{veil} future. Thus we add the name bridal falls ~~to~~ to this falls which we realize is a new & novel name for a water falls, at least within a 10 mile radius. Left here and arrived at aspen grove as scheduled where we heartily accepted a royal feast plus ice cream which found ample lodging space along side our ^{early} breakfast of 5:30 A.M this morning. While this trip was more or less one for pleasure but felt reward in having the opportunity to witness the leucosticte, witnessing the hawk migration and procuring data on the hibernation data of the marmot. Mary also claims satisfaction.
