gaping mouths. Indicates
entrenchment of river and
type of vegetation with Black
willow predominating. Picture
2-9-14-40 shows a congregation
of large 2 1/2' fast carp re-
ceiving oxygen from fresh
supply of water from the
water falls at edge of river.
When disturbed from falls
the fish required about 15
minutes to regain the format-
ion. This area at base of
falls held nearly all large
carp. ^{70. no. 3.} Picture 3-9-14-40 in-
dicates numbers in a normal
stretch of the river. Picture
4-9-14-40 shows how carp
line themselves up against
log to eat algae from its sides.
Picture 5-9-14-40 general view
of carp. Find that the great
predominance of fish are carp.
