

Cascade. ⁴⁰¹⁰¹²⁻¹⁷⁸
several ^{slopes} block down ^{this morning} to this gateway from the upper slopes to Pole Canyon. Many coyote tracks and droppings in evidence along entire route. Also found 5 more *Eutamias umbrinus* and one *Eutam. consabrinus* on return. *Consabrinus* was found about 3 blocks down from top. 2 more dusky grouse to list.

Arrived at car at pole canyon pass at 3:27 P.M. State of Pole Canyon severely plowed, probably for receding or erosional control. The animal and bird lists were only as complete as time would allow. From top of mt observed the pelican on lake in raft out from point at Lakeview.

This morning smoke arranged itself in several distinct horizontal layers in all valley to the west but none to the east of ~~Wasatch Range~~ Wasatch Range except near Soldier summit direction where the smoke and haze had probably pass through mts or as a result of trains in canyon. Day cloudless and practically no wind on top. In partial summary saw 11 large buck and 6 does with signs and fresh trails indicating at least that many more. Definitely saw, however 17 deer today. Also saw 23 *Eutamias umbrinus* and 17 dusky grouse. and 5 *Tamiascus h. ventorum* as well as others species as indicated in notes of less importance
