

while enlarging hole. mate arrived in ⁴¹⁰⁵²⁴⁻⁶⁹ few seconds, watched
settle go into hole 200' away. Sp Towhee and Hummer
near. Artemisia, oak, chert grass, look up, sp(?), 5 L.S. Towhee,
3 logzuli, 3 L.S. Towhee, 1 logzuli, magpie nest & 6 eggs
bird left nest and did not call, in group oak with leaves
drying up, Chokecherry underbrush, 4 old nest near arbutus
15' of new one and in progressive stages of deterioration.

5:14 P.M. divide below chimney ledges directly north. Can
hear to east in canyon. 1 chickadee, 3 L.S. Towhee,
can hear to west from divide magpie, 2 L.S. Towhee.
Great mass of oak dying 5:35 Cliffs, nutoma, one
cottontail ran 20' to rock crevasse, natural bridge loud
mark. L.S. Towhee increasing to east. Arrived top at
5:50 P.M. 12 L.S. Towhee to next divide. Head of V Canyon
at 6:00 P.M. From here can hear. 12 L.S. Towhee and
4 other unidentified calls(?), hummer, 30 L.S. Towhee
calls per minute on all sides. Parky work on oaks.
6:12 P.M. Broad oak divide, 2 cottontails, dead forty,
Towhees too numerous to count, marsh hawk (blue phase)
Top 6:20 P.M. Left Top 7:00 P.M. Evergreen Caenathus
Woodhouse jay, 41 L.S. Towhee calls ^(songs) per minute others
giving warning calls. 50 L.S. Towhee calls per minute,
back around 7:20 P.M. One individual issued 11
songs per minute. The 41 and 50 calls of above in-
dicate songs and not necessarily different birds. Hummer
more active in evening and after sun down. Nice
view of Alpine mountains.
