invariable down stream.

Larus flying [↑]
But about 7" wingspread started flying shortly after

sundown.

Phasianus colchicus torquatus.

nelli Vaughan reports 553. Branta nigricans passing over
Snoovius Island. They were flying up the Willamette Valley.

10/5/41

Wind River trip. Government Mineral Spring, Observation
Point, Berry Meadow Camp and Observation Point to the north. At
7:00 A.M. left the Barnes General Hospital and found the following birds
in conifer forest east of the reservation.

- Phasianus colchicus torquatus 12
- Dendragapus fuliginosus sierra 2
- Setta carolinense.
- Oryzobates pilosus harrisi
- Junco oreganus
- Turdus migratorius caurina
- Corvus b. brachyrhynchus
- Sturnella neglecta
- Passer domesticus
- One unknown.

Arrived at wind river bridge at 9:40 A.M. This bridge is a high sus-
pension bridge 235 feet high. Interesting river gorge below. Birds
in this area are:

- Turdus migratorius caurina
- Junco oreganus
- Colaptes cafer cafer
- Cyanocitta stelleri.
- Melospiza melodia.
- Sealia mexicana 20
- Tamiasciurus douglussi
- Neoclypeus columbianus
- Corvus b. brachyrhynchus
- Cutamias.
- Thamnophilus parietalis.

Arrived at Forestry Experimental area at 11:30 A.M.

11:40 A.M. Iron smelter at Government Mineral Springs. Left on trail
at about 11:45 A.M. for observation point. The trail leads thru original
Douglas Fir, Cedar and hemlock. Trail with dry conifer needles making
going easy as soft as if walking on Persian rug. Beautiful area with
subdued lights and easy grade. It was upon this trip that I perceived
of the stimulating effects from these eloquent forest lights. They are of
