

at falls 420712-77 ^{→ immediate →} surroundings damp and supporting growths of maiden hair fern, moss, lichen etc.

Oporornis talmei

Corvus brachyrhynchos hesperis. Always present and calling from show of late, spending most of their time flying from tree to tree.

Penthestes atricapillus occidentalis.

Pandion haliaetus carolinensis. Arrived in afternoon from the north. It descended from skies in gradual degree until 50 above water where it remained for a few minutes. It then decided to alight upon the uppermost branch of a dead willow where it reposed until the limb broke. This sent the osprey down but in a graceful readjustment again alighted upon a more substantial limb a short way beyond.

Buteo swainsoni anthonyi. one bird

Pix sponsa 3 birds

Ardea herodias fannini. One bird remained in submerged willow swamp for afternoon.

Mallard. Rare

Sandpiper. (Sp. questionable but quite confident is the spotted sandpiper, actitis macularia).

Bull frogs called about 1 per 5 minutes.

Recorded the following pictures:

no. (1- 7-12-42) Regal Lily from Camas Gardens.

no. (2- 7-12-42) Water Lily from upper limits of Lacamas lake. Recognized only 2 patches of these pure white lilies. They are unquestionably one of the main attractions of the lake features.

no. (3- 7-12-42) Ibid.

no. (4- 7-12-42) Lacamas lake looking N and west. West and south side during twilight lights and shadows make ideal background.

no. (5- 7-12-42) Small water lilies in juxtaposition. These, as far as I could tell, do not support flowers but are associated with the native yellow lilies.

no. (6- 7-12-42) Ibid.

no. (7- 7-12-42) Tuber of lily. Species questionable. Size 2.4 inches; 5" in diameter. Has sweetening ocellus.
