

7/15/42

Insertion of picture of moon taken several weeks ago.
 Enricha, X X super film; taken with aid of 8X binoculars
 negative enlarges approx 7 times. Such a photograph as
 this one represents the degree of shading that is not usually
 discernable in a large picture from wide lens telescopes.

7/19/42

Mellie and I spent day at Spirit Lake on north side of mt.
 St. Helens, arriving at 1:00 P.M. and leaving at about 8:20 P.M.
 Usual observation with common interest. However, the
 record of three other more than repaid us for all efforts and
 time expended. Enroute recorded the evident forms from points
 along the way.

Castle Rock.

Toxycneta thalassina lepida
Zonotrichia leucophrys pugitensis
Empidonax traillii brewsteri
Melospiza melodia morphna
Spinus tristis salicamans
Passerculus sandwichensis abundantus
Corvus brachyrhynchos hesperis
