

Larus delawarensis. Only form observed representing adults, 1st and 2nd year young. Approx 23 birds, and generally or solitary distributed.

Talco sparverius sparverius. One bird.

Geothlypis trichas occidentalis. 8 birds observed. Am impressed with the non-conforming nature of this bird to its habitat. It is not the true swamp bird of Utah but a ^{dry} brush bird. Males molting heavily.

Oparornis talmei. 3 birds observed.

Dryobates pubescens gardneri. One bird in willows along shore of lake at mouth of Levensick Creek.

Arctus spualitta. Just a few birds
9/5/42 [for 9/1/42 see addenda p. 421225-156]

As guest of the Vaughan family made 3 day trip to mt. Rainier via Goldendale, Yakima, Roche Pass, Sunrise Park, hence back to Okanogan Canyon, hence to Marj corners to Vancouver. Enroute to Goldendale recorded the following.

Ardea herodias fannini

Aix sponsa

Anas p. platyrhynchos

Pelecanus albifrons

Larus delawarensis

Larus occidentalis

Dryobates vociferans vociferans

Corvus brachyrhynchos leucurus

Corvus corax sinuatus

Sturnella neglecta

Euphagus cyanocephalus

Zenaidura macroura marginella

Otocoris alpestris - near Goldendale.

Carpodacus mexicanus frontalis

Cathartes aura septentrionalis

On the following day at Goldendale Nellie and I made short trip up creek in the immediate environs of the city, toward the Golf Course, n. w. of city.

Vireo solitarius carolinensis

Spinus tristis salicamans.

Carpodacus mexicanus frontalis

Colaptes cafer callaris
