

Travelled by foot the entire distance from starting point at 9:15 to point where Bear Prairie road intersects the Washougal road. From that point on availed myself of motor transportation into Vancouver. Day cool with intermittent sunshine and hail, snow with high wind on ridges. Birds observed in Canyon section from 9:15 A.M. to convergence of Sunset Stream and Dale Valley creek.

*Oxyechus vociferous vociferous* 4

*Cyanocitta stelleri stelleri* 6-2-1-4

*Zonotrichia leucophrys* - several groups with the dominant singing bird in canyon.

*Corvus brachyrhynchos hesperis* - 2-2-1-6-1

*Phainopepla nitens torquatus* - 1-1

*Colaptes cafer cafer* - 2-1-1-1-1-2

*Turdus migratorius caurinus* - 2-2-1-6-1-6-1

*Euphagus cyanocephalus* - 2-2

*Sialia mexicana* - 2-2-2-1

*Junco oreganus* - groups and singles.

*Dendroica fuliginosa fuliginosa* - 2 drumming.

The representative forms at Dale Valley to the Silver Star mine would include the following:

*Sialia mexicana* - groups of 2-1-2

*Corvus brachyrhynchos hesperis* 6

*Turdus migratorius caurinus*

*Spizella naevus naevus*

*Junco oreganus oreganus*

*Zonotrichia leucophrys*

*Dendroica auduboni auduboni*

*Melospiza melodia morphna*

*Regulus satrapa albivaceus*

*Corthylio calendula gunnelli*

*Penthestes*

*Asiasphorus rufus* - group 2 at creek edge among the newly budding trees.

*Talco sparverius sparverius*

*Copella delicata* - 1

Found the bird life decidedly scarce in Dale Valley particularly the upper end of valley. The fire scar of the entire country
