

peripheral edge of the lake as a result of having been driven from their former habitat by the encroaching waters but the opposite was found.

6/9/43

Vancouver Lake via Leveich Creek. Itinerary as of above and corresponding to same hours in field. Day cloudless but with cold strong wind coming off the lake. Water about 3' lower than previous trip. In general found the day a most favorable day as far as results were concerned. It is interesting to realize that the wildlife will vary so noticeably according to weather conditions. Recorded the following numbers approx.

Turdus migratorius caurinus. 15

Hylocichla guttata sequoiensis 5

Myiochanes richardsoni richardsoni. 28 Forms found along lake edge among the willows were absent on this trip; possible due to high wind of today.

Dendroica aestiva. 16 singles

Vermivora celata fulvica 5 singles

Icteria virens longicauda 7

Spizella passerina arizonae 18

Passer domesticus

Melospiza melodia morphna. several

Corpodicus mexicanus frontalis 8

Phainopepla nitens torquatus. 17

Psittiparus minoris minoris. 2 families

Spinus pinus pinus 6 in one group

Spinus tristis californicus. 12

Zonotrichia leucophrys pugetensis 9

Oporornis tolmiei Has warble call like House Finch with last two notes higher and longer than warble notes

Pipilo maculatus oregonus 12

Dendroica nigrescens 6

Selasphorus rufus 17

Coccothraustes v. swainsoni 7 Call like House Finch with emphasis on last two notes

Piranga ludoviciana 9
