

3/8/44

Pictures of Virginia Vaughan and Jeanette at the Vaughan Home.

3/18/44

Camp Bannville, 18 miles east of Vancouver, overnite bivouac during early morning from daybreak to about 1 1/2 hrs later observed the following along creek edge in meadows.

*Ardea herodias fannini*

*Capella delicata*. In nuptial flight at daybreak; later calling in field in typical nuptial call.

*Bulbo virginianus saturatus* (sp. sp.?) Calling early morning.

3/24/44 (see inserted trip of 3/17/44 after 3/26/44)

Burnt or Leveech Creek at end of 2-R and S. Street.

Outstanding in creek:

*Sitta mexicanus occidentalis*

*Dendroica auduboni auduboni*. Many ♂ & ♀ feeding on ground in fields, some several hundred feet from trees or bushes.

*Accipiter cooperi*. 1 flew across creek

*Anas platyrhynchos platyrhynchos*. 2 pair in creek.

Swallows. (Sp.?)

Bald cumulus clouds today.

3/25/44

Cloud day. Outstanding cloud formation this day. Took following pictures at Leveech Creek as of above.

(1-3-25-44) Picture of popular trees at P street and Leveech and facing east. Picture (2-3-25-44) Ibid but facing south.

Picture no (3-3-25-44) in same area but hillside foreground.

This typical bald cumulus cloud formation remains for only a short period of time during the official change of spring. Is unquestionable the most eloquent sky of the entire year, as short as its duration may be. Picture no (4-3-25-44) in same general area shooting south with Leveech Creek level in foreground.

3/26/44

This afternoon at 3:15 P.M. at Barnes General Hospital recorded cloud condition of the sky. Typical for this time of the season. all shots to the south. nos (1-3-25-44), (2-3-25-44), (3-3-25-44) and (4-3-25-44). nos 2 and 3 are composite. The last three days have been remarkable in, that the meteorological parade of the sky has been of identical sequence; that is, mornings overcast
