There otocoris would fly up from the side of the road and swerve either to one side or the other. Some however would fly directly in front of the car for several hundred feet.

At Dugway pass and 3 miles to the west observed 3 young Aquilus mallis mallis in a dry wash. They would measure approx 4 mtrs in length. Chrysothamnos dominated the vegetation. 9 raven were feeding in a large gulch with compact grouping. White line transmal cliffs just to east. Beyond beyond
