

Have been caused by ice in their feeding environs. Another group of approx 2,000 *Anas p. platyrhynchos* were observed flying to the north. They were continually rising and settling beyond the limits of the stream.

18 *Carous brachyrhynchos* used the river course for feeding.

307 W. 23rd St., Lawrence, Douglas County, Kansas

28 Jan. 1949

15 bob-white at feeder. These birds have kept up this number since the beginning of the severe low temperatures and heavy snow some three weeks ago. Their original number in the fall was 17 and the depreciation to 15 was before the first snows.

Museum of Natural History, University of Kansas, Douglas Co., Kansas.

28 Jan., 1949

This afternoon prepared the following mammals for Dr. Rallin Baker. These specimens were taken at 1 mi. E. and 1/4 mi. S. Orange City, Sioux Co., Iowa.

♂	<i>Peromyscus maniculatus</i>	133-52-18-13-14 gms
♂	" "	145-57-19-14-15 gms
♀	" "	131-52-18.5-13-13 gms. (no emb)
♂	" "	148-62-19-14.5-17 gms
♂	" "	134-57-18-13-13 gms.
♀	" "	138-55-18.5-13-14 gms (no emb)
♀	" "	126-48-17-12-13 gms (no emb)
♂	" "	133-55-18-13-15 gms.
♀	<i>Reithrodontomys</i>	128-61-18-12-8 gms (no emb)
♂	<i>Microtus ochrogaster</i>	140-42-18.5-11-18 gms.
♂	" "	138-42-19-11-19 gms.

Museum of Natural History, University of Kansas, Douglas Co., Kansas.

28 Jan. 1949

The following made available to Museum of Nat. History from Tularemin collection. Skulls only.
