

mammals of San Juan Island:

Lorex vagrans vagrans
Procyon lotor psora
Mustela vison luegumenas
Eutamias townsendii townsendii
Peromyscus maniculatus ballistini
Microtus townsendii fugeti
Ondatra zibethicus oregonensis
Rattus rattus rattus
Rattus rattus alexandrinus
Rattus norvegicus norvegicus
Mus musculus musculus
Odocoileus hemionus columbianus
Canis lupus fuscus (extirpated)
Grampus rectipinna Killer whale
Globicephalus scammonii Blackfish
Rhachianectes glaucus Gray whale.
Phocaena vomerina Harbor porpoise.
Bats.
Lutra canadensis vancauverensis
Parusaceus douglasii douglasii
Castor canadensis leucodonta
domestic rabbit introduced.

Conspicuous plants

Pseudotsuga taxifolia
Arbutus menziesii
Quercus garryana
Acer macrophyllum
Pinus contorta
Tsuga heterophylla
Abies grandis

Minnesata Reef, San Juan Island, San Juan County, Wash.

13 July

Collected the following chitons from one low tide pool at the extreme S.E. end of the island reef. This pool was in a solid rock base at about 1 foot above low tide and within this area of 2 x 2 meters were several rocks of about 10 cm in size. Bottom of shells and rock-gravel debris. Collected only those desired for collection. It would appear that such a tide pool offers the best habitat for these chitons, as just beyond on all sides did not find this population.
