

Lake view, Douglas Co., Kansas
15 Oct 1950

At 4 1/2 mi. N and 3 1/2 W Lawrence (P.O.) found approx 243 Chen
hyperborea and Chen caeruleus

approx 1/5 of the group were
of the later species. They
were mixed in a heterogeneous
group with slight tendency
for Chen caeruleus to
be segregated. They were
resting on the sand and
mud river course with

approx 300 feet distance
between the birds +
the side of the river
channel where vegeta-
tional growth interrupted
an otherwise barren
sand river bottom.
when first approached
they (9) swam out into

the river but soon all left after gradually becoming alerted.
They flew in one group to the west, flying in the general
direction of the river course. At the area marked B observed

283 Fulica americana, 15 ^{mareca} ~~caeruleus~~ americana, 37 Podilymbus
podiceps, 8 Anas acuta tzytzihoa, 2 Anas discors and 1 Anas
platyrhynchos. 18 Querquedula vociferans. no Egretta in site.
above from casual observation and not systematic inspection.

Lake view, Douglas Co., Kansas
18 Oct.

Fredrickson and H. B. Tordeff report following from area as in
above. approx 200 Chen hyperborea and few Chen caeruleus,
10,000 Agelaius phoeniceus, one wounded Pluvialis d. dominica, few
Erolia mauri, one Tringa solitaria solitaria. Tordeff also
reports a flock of Chen hyperborea + Chen caeruleus flying
south over Museum of Natural History on the campus at Lawrence,
at approx 6:00 A.M. I have not personally heard any geese flying south
since 15 Oct, 1950

Museum of Natural History, Univ. of Kansas, Lawrence, Kansas
21 Oct

Flock of approx 80 Blue & snow geese flew south over museum
at relatively low elevation at 3:00 P.M. Day clear and only
slight breeze. Temperature expected to go down in 2 or three days
however, today has been one of the warmest days we have had this summer
