

JOURNAL 1928

JAMES W. BEE

NOTES 1928

²⁻¹⁷⁻²⁸
 Pictorial record taken in Provo, Utah of close relations. Picture no. 1-2-17-28 is my grandmother and aunt Edith. Mrs. Bee was the wife of grandfather Robert Bee and was formerly Miss Hanna Olsen. Edith Bee is daughter of Mrs. Robert Bee and Mr. Robert Bee. The

1-2-17-28

2-2-17-28

picture no 2-2-17-38 was taken in front of Mr. R. B. Bee's home in Provo. Mother is subject. Old Jack snuggles on the top step in the background.

2-19-28

Pictorial record. Picture 1-2-19-28 is Edith Bee and James W. Bee taken in front of ~~her~~ her home. The address in picture 265 E. 15th So. no 2-2-19-28 is James W. Bee and pooch Jack. The dog at this date

1-2-19-28

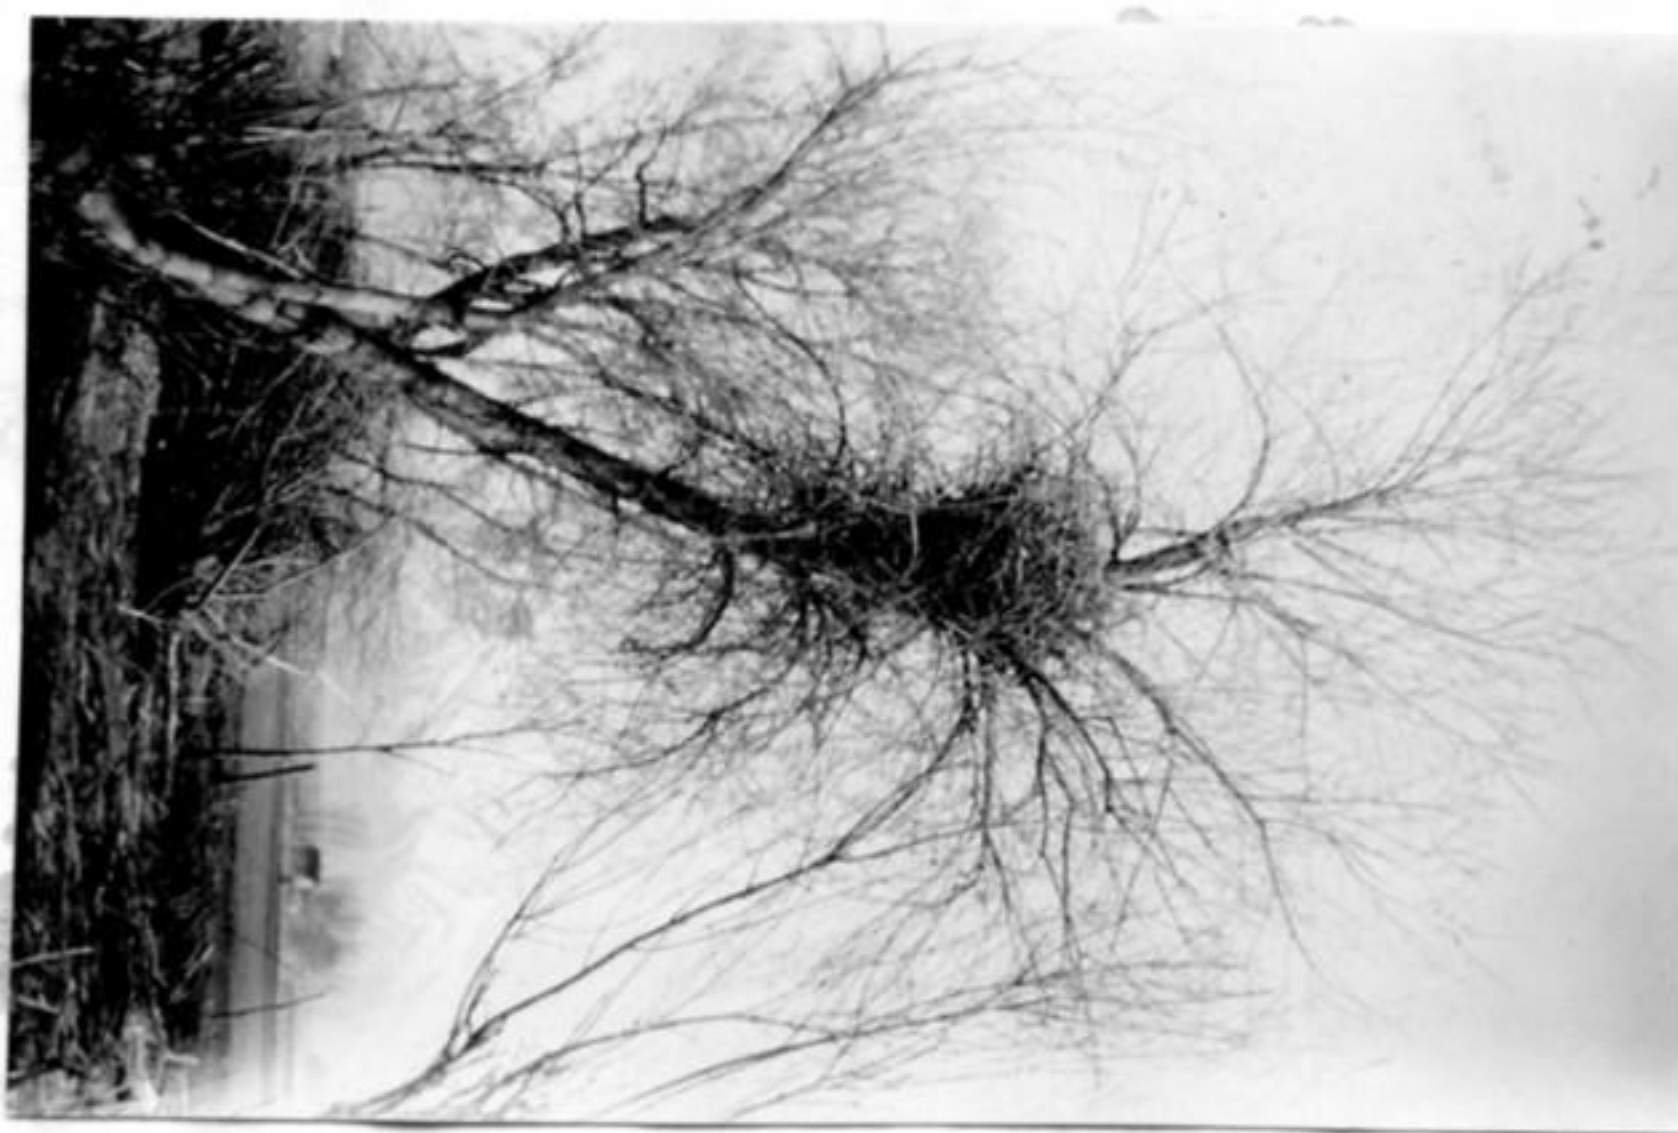

2-2-19-28

was some 75 years old. I am also 15 but show it more than the dog. No. (3-2-19-28) is of family. From right to left brother Robert, mother and sister Mary. Max was not in picture. Old Jack has an art of sneaking into the background. The old faithful red-Indian bicycle to the side of the shot. Taken at home at 255 E. 1st So. Provo, Utah.

3-2-19-28

4-8-28

Two pictures taken on same day. No (1-4-8-28) of Edith Bee taken at home and no (2-4-8-28) of a nest of the 6-billed magpie taken mouth Noble Creek west of Springville, Utah. Nest of seven eggs. Nest placed in black willow tree adjacent grove.

1-4-8-28

2-4-8-28

5-3-28

Picture of sister Mary taken in her school play costume while attending the Measer School in Provo, Utah. Picture taken in back of her grand-mother's home next door. The costume undoubtedly depicts a Dutch lass. She is holding a rose in her hand.

1-5-3-28

Group of pictures taken in Payson Canyon near the Payson reservoir. Camped at the Forester Rangers Station near reservoir with Gaylord Gillies and Emmett Ireland, both of Provo. The series is mainly of the reservoir taken from different angles. Picture (1-6-20-28) was taken from the top of a conifer tree on hill at the north end of lake. Looking south with ribs in distance. The tree in this area are predominately aspen with alies conular and Pseudo. sugo mixed. When trees are found they are very large, one conifer better than 5' through. The aspen are big, tall and crowded. Many forest birds are found here in unusual numbers. Oaks and maples on some east ridges. Springs in valleys with nice vegetation and willows. Found 3 bees nests. 2 in aspen and 1 in a large oak tree 18" in diameter. Shorebirds and salamanders around the different lakes. Many bear claw marks on aspen trees. marmot at station. no (2-6-20-28) same as above but on south side looking north. no (3-6-20-28) on knoll to south of reservoir looking north with Toaster mountain in background. The two areas at same altitude are contrasted here. no (4-6-20-28) from top of tree to north rim looking south across high area with ribs in the distance. The mixed tree condition is clearly seen from here. no

(5-6-20-28) shows ribs in the distance with a rocky ridge in foreground. Also near reservoir being N.E. of there. Three red-tail nest found while on stay at the ranger station.

5-6-20-28

1-6-20-28

2-6-20-28

3-6-20-28

4-6-20-28

Made a lone trip up Looper mountain from the ranger station near the Payson reservoir. Followed along the regular trail. On the divide met a sheep herder at his camp and had dinner with him which include my first sour-dough biscuits and lamb chops. In return I was able to give him a visit which he most thoroughly enjoyed having not seen anyone for some time, a recent newspaper, and some candy which I had in my pack. Drinking water was a problem. He was getting his from the cugue to the east on south side of mountain from a snow bank. He told me there were one or two bears on the mountain. The clarks crow were in evidence particularly along the ridges and high divides & peaks. The hillside just north of his camp was densely covered with Conifers.

1-6-26-28

These conifers ~~seem~~ seem to come to the ridge & then stop abruptly. The other side of this ridge is relatively free of Conifers with a few aspen and the dominant flower the lupine which covers the whole hillside. Picture 1-6-26-28 was taken as we made our way up to the top of Looper Peak. The

2-6-26-28

shepherders camp is situated on divide just to the right of the the reservoir which pops over the ridge. Rebo in background. The picture 2-6-26-28 is a double exposure but usable. The sheepherder on ridge just below the peak to the west. The top of this peaks looks like some one had pile a great cap of boulders there, as not earth or soil occurs. The Clarks crow favor such ridges and exposures. Picture 3-6-26-28 is one taken by the herder. He took a picture of the dog for me and I happened to be in the way. This is the top of Looper mountain where the summer air is cool and the wind is always invigorating. A picture shoot-
ing along the Wasatch to north would be worth another trip.

3-6-26-28

made trip to maple flat today. while on the flat proper made a few picture records. Maple flat is situated directly east of Provo and represents a pivot fault along the Wasatch range, the rocks on the flat are the same as those found higher on the peak above the maple flat proper. Have observed the slate bed in Slate Canyon to have faulted down several hundred feet. The first picture. (1-8-1-28) was taken near the spring on the north end of the maple flat. It was taken on trail looking down and up Slide Canyon. The first flat of the Slide Canyon is shown. Trail leaves at this point. The contrasted types of trees on either side of the canyon is clearly shown. The cones on the conifer to the left is interesting. no. (2-8-1-28) shows flats proper. The type of vegetation can be seen in foreground. The trees are mainly, aspen, maple & oaks. An aspen tree borders picture. Picture (3-8-1-28) shows a similar scene as above with the vegetation indicated. This flat is large enough to land an aeroplane. Picture (4-8-1-28) taken at the point, showing Slide Canyon & valley beyond. The point is indeed a precipitous cliff. no. (5-8-1-28) shows the west side of the point showing the mammoth cliff. This precipitous cliff continues down beyond base of picture. A red-tail nest on the east side of mother loon's noise but far below. The Swift voice came from this point as they glide by.

1-8-1-28

2-8-1-28

5-8-1-28

4-8-1-28

3-8-1-28

Took two pictures today of the family at home in Bravo City, Utah.

Picture (1-11-2-28) is of mother and Mary.

No. (2-11-2-28) is

Mrs. R. C. Bee my mother, Mary M. Bee my sister in front.

Mrs. R. Bee father's mother and Mr.

R. C. Bee my father in the background.

Grandmother's home in the background.

Grandfather Bee died in 1926. Mrs.

Bee in picture is

Dada's stepmother.

1-11-2-28

2-11-2-28

6-22-28 (late insertion)

These two pictures were taken on the other side of Utah Lake at the Heronery south of Pelican Point at the Indian Knolls. There is found a colony of Herons nesting in the large cottonwood trees. At these heron trees found many heron nesting in the trees but also evidence of slaughter by hunters. The nests are placed at most every angle of the tree.

Picture no (1-6-22-28) shows Mary my sister leaning against ^{one of} the trees in the colony. Utah Lake is immediately bordering the colony. The other

picture (2-6-22-28) was taken along the lake shore showing the Indian knolls and pelican point to the N. east. Mt. Timpan and Cascades in the horizon. The shore line is shown with the extent of vegetation present.
