

were captured when 700 mm long and 320 mm high (estimation), This evening after 6:00 P.M. set traps at 152°05'30", 69°23'12" between longitude 00" to 60" beginning directly below the oil well to about 1/2 mi to west along base of bluffs.

most of the traps placed on ridges 1 to 2 feet high in the low marsh area, all traps in established trails, some may not have been too recently used.

Collected set of 5 eggs (natal feathers) 520626-16 of the redpoll. Nest in dwarf willow 300 mm high in small 2 square meter patch, no leaves on willows and nest plainly visible. Nest small and compact and able to support itself. Nest of ground nesting birds not so firm. Nest circular.

- 78 mm wide
- 42 mm cup diameter
- 38 mm cup depth
- 50 mm depth nest
- 9 gms wt.

rim of nest overhanging inward.

Outer structure various fibers and willow stems. Inner lining *Ereophorum*. Innermost lining white down feathers 15 mm. nest well insulated.

Ground squirrels on flat and many holes on exposed surface of slopes. 6 on one ridge. Westley Redhead reports duck hawk nest and 3 eggs on mt. Ulmiat.

Both birds defend nest by calling and ~~and~~ "standing on their tails in front of me".

Saw 1 Sandhill crane along route to trap line. It seemed more brownish than

birds observed in Utah on nesting grounds. It flew about 70 meters and alighted on edge of small lake. At Ulmiat Camp, Ed. collected set of 6 eggs of the Lapland Longspur 520626-17 from raised polygon on flat part of valley. Nest flush with the ground. Cup wide in contrast to redpoll

→ outward
