

Two rami measured 270×2550 and 260×2620 using diameter of above measurement and total length. These two rami differed in curvature. One scapula measured 1300 mm. One skull measured 710×1280 mm

The skull (on previous page) which measured 580 (inner squamosal distance) had a greatest width of 1270 mm.

MEASUREMENTS BALAENA MYSTICETUS

The above graph of measurement on previous page showing normal curve.

Observed light colored seal at extreme northern point at about 100 feet from shore. It rode high in water. 3 snowy owl at point. About $\frac{1}{2}$ way between Birnirk and point counted 230 glaucous gulls in one group, 19 Sabine gulls and 8 eiders. No red or northern phalaropes. No snow bunting at point in area where they nested this summer. at $71^{\circ}22'10''$, $156^{\circ}30'00''$ collected young harbor seal 520911-1. It measured 980 mm length, tail 88 mm, hind foot 204, ♀. This A.M. drove to Barrow Village to see Mr. Thomas Bower. Bower has never seen porpoise east of E. Leon Lagoon. His father saw a narwhal at mouth of Colville River years ago.
