

This evening set 150 traps at $13\frac{8}{10}$ mi. E and $6\frac{7}{10}$ mi. S Churchill (P.O.) in tundra community where one would expect to find Lemmings, Microstonyx and probably Clethrionomys. Trails and holes in mosses and lichens indicated a high population last year. The area by road from camp headquarters is 17.9 miles. From rocket sight by road is 3.6 miles. From Churchill Post office is $13\frac{8}{10}$ mi. E and $6\frac{7}{10}$ mi. S Churchill. There are a few caribou trails and some fox tracks. A marsh hawk hunted over field to east but without success. Frogs active near the lake here. One wonders how they survive the winters. The traps from the meadow grasses at lake N of the ridge were placed in a field created by the railroad grade at $3\frac{2}{10}$ mi. E and $14\frac{1}{10}$ mi. S Churchill (P.O.).

Churchill, Manitoba, Canada

Aug. 12, 1956

This morning collected 19 *Microtus pennsylvanicus* from an area approx. $3\frac{2}{10}$ mi. E and $14\frac{1}{10}$ mi. S Churchill (P.O.) set last evening. Of the 50 traps in the coniferous forests on the rock bridge at base camp caught 1 *Pheusaomys*.

Made trip to Fort Prince of Wales on the W side of the river that flows N into the Hudson Bay. Photo 560812-20 of interior of fort showing quarters with walls crumbled, cannons and outer wall. Wheel to left. Photo 560812-21 of cannon and view to north through window. Photo 560812-22 of general view at point east of fort showing rocks and outgoing tide. Photo 560812-23 of small pool of captured water in rocks and Hudson Bay beyond. Ripples of outgoing tide. Collected a metal washer used in supporting the canvas cannon. no. 560812-24 and a nail 560812-25.

Churchill, Manitoba, Canada

Aug 13, 1956

Bristol Foster of 136 Sawlish Ave, Toronto 12 (or Royal Ont. museum) presented me with a *Tamiasciurus* from Twin Lakes Hill, SE Fort Churchill, Manitoba, Canada. I have observed these squirrels at Twin Lakes and at Goose Creek south of Churchill along the railroad.

From the traps at $3\frac{2}{10}$ mi. E and $14\frac{1}{10}$ mi. S Churchill (P.O.), same traps as those that caught 19 yesterday, collected 20 *Microtus pennsylvanicus*. This evening added 40 more traps to this line
