

Lameshur, St. John Island, Virgin Islands.

Sept. 4, 1957

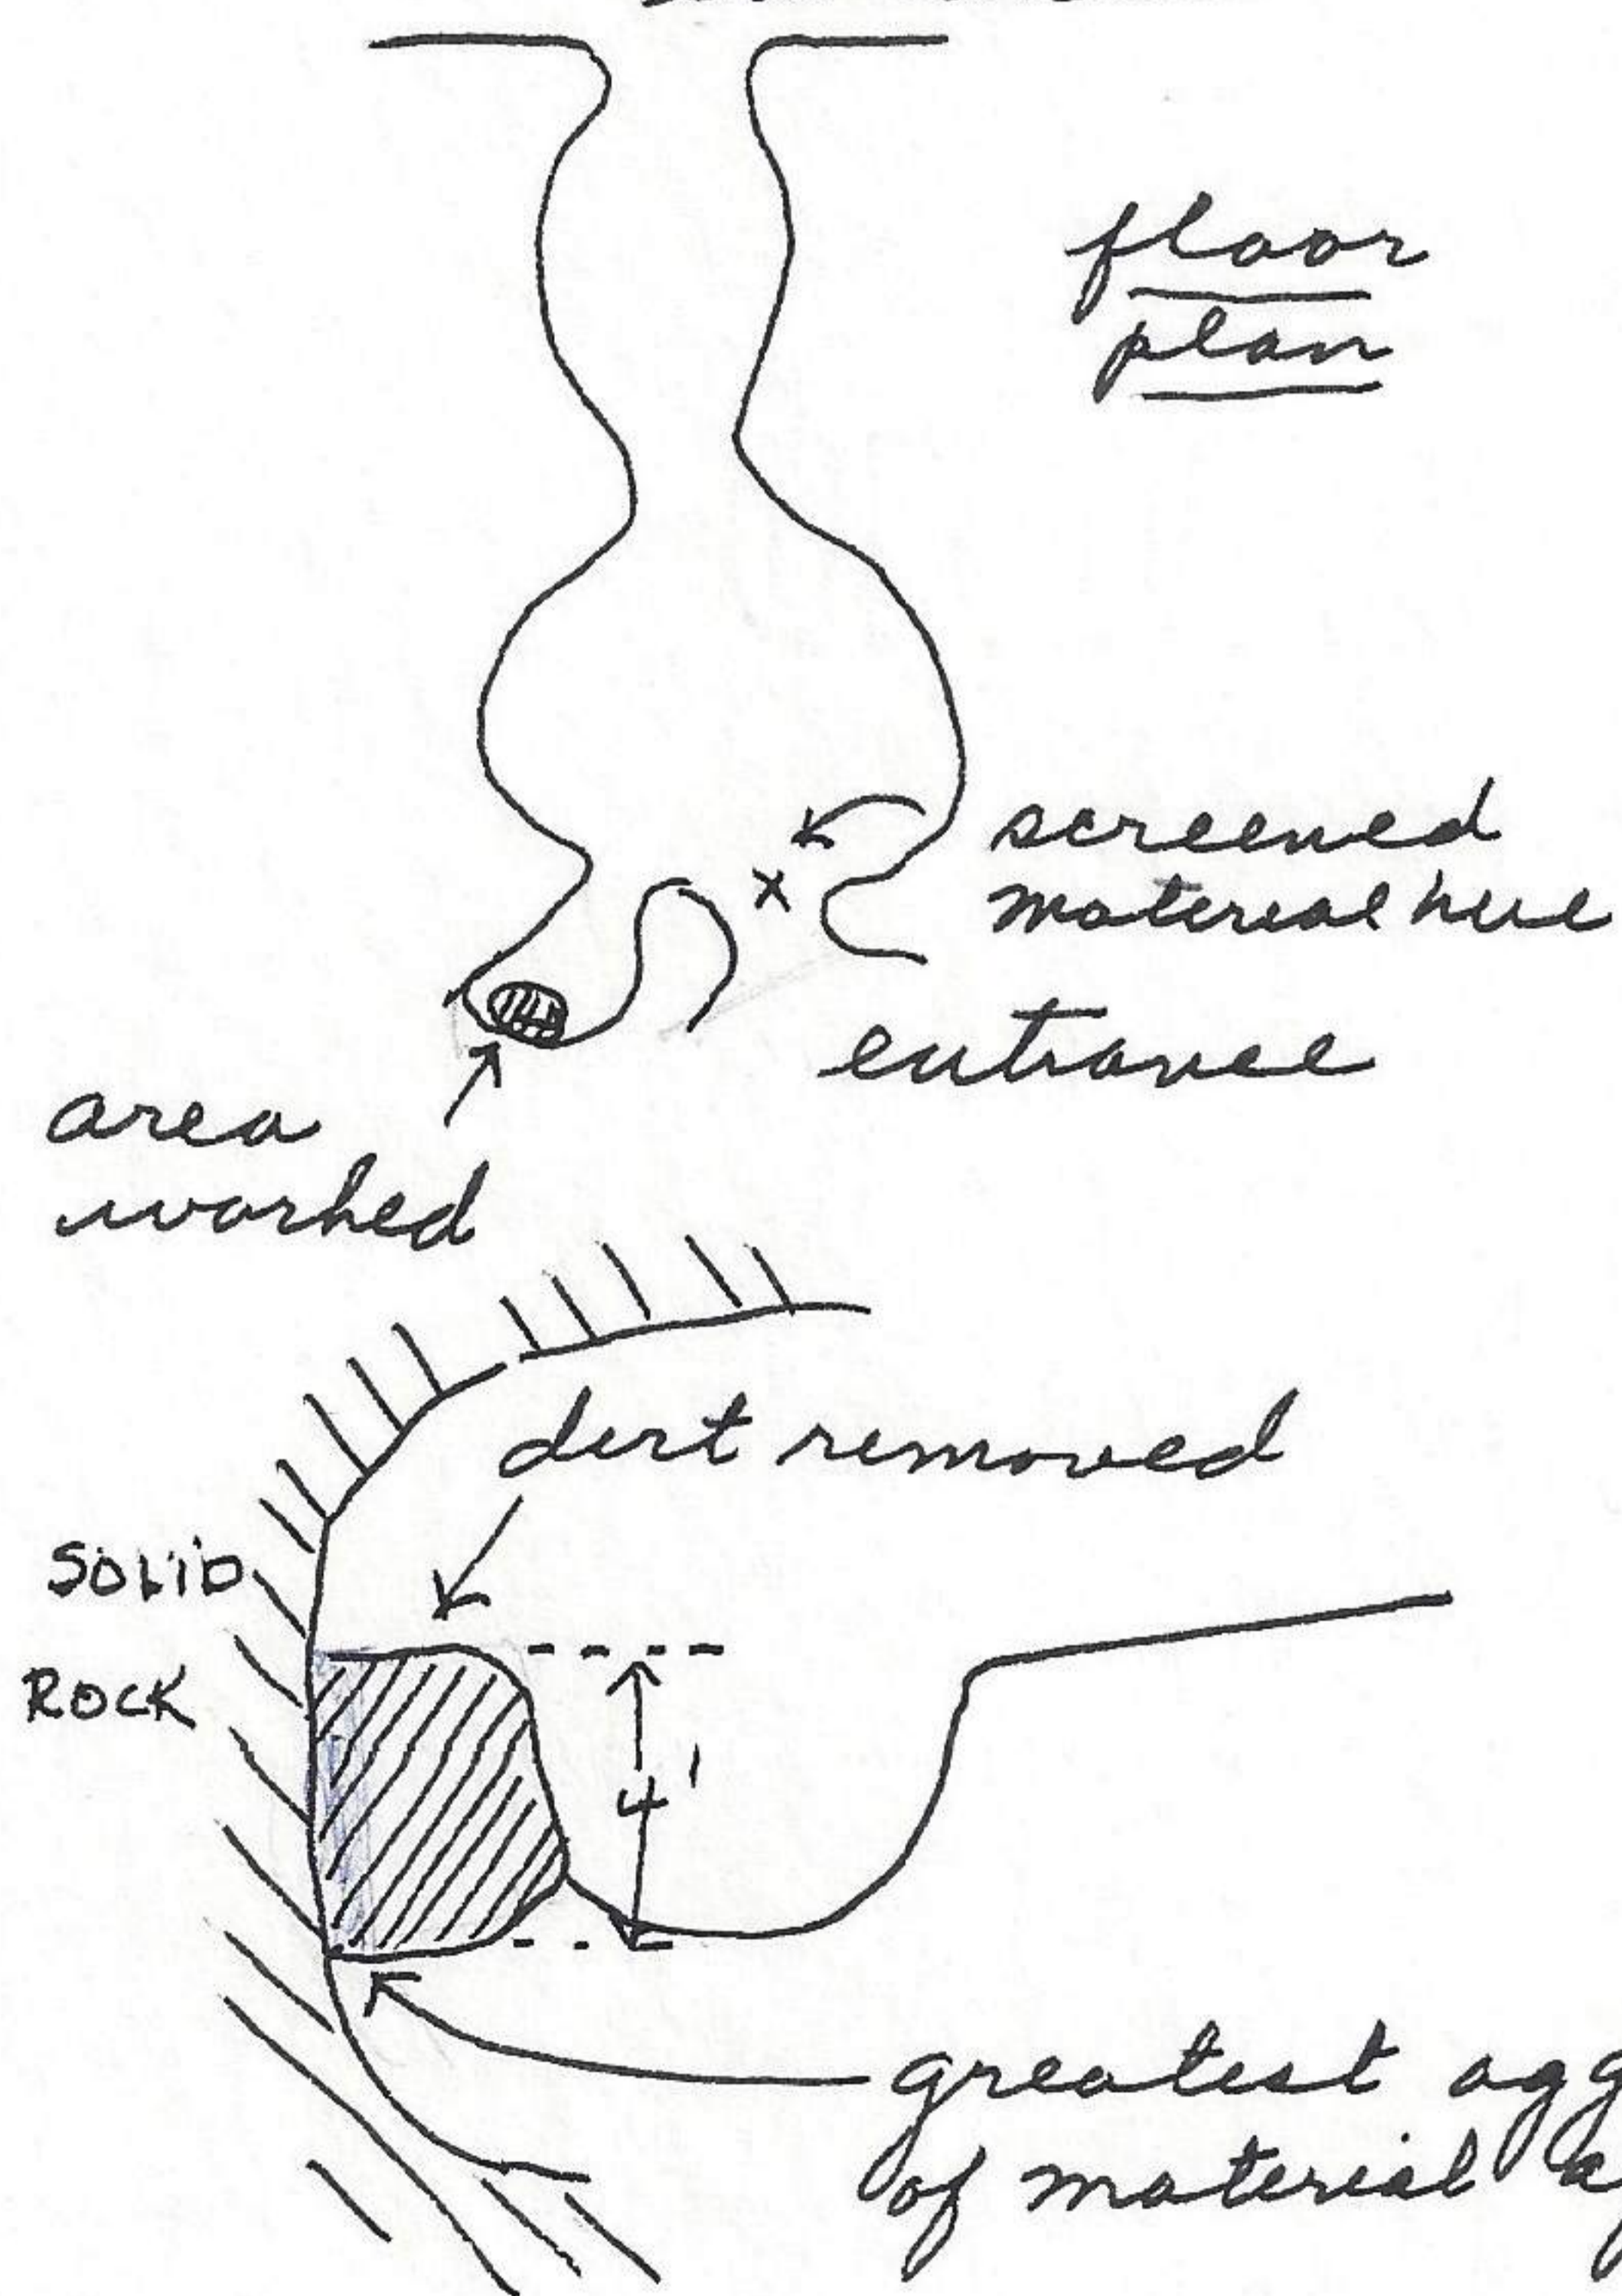

Depart for St. Thomas Island this A.M. in preparation for departure to San Juan. On boat met Mr. Folk (Ridge Folk). He said that he had planted the following fish in the fresh water pond 1/10 mi. W Lameshur Estate House: African Perch, fresh water mullet, Gobis and a shrimp. I had seen several fish in the pond, one of which remained near the edge of the water until you approached and then quickly swam away.

Departed St. Thomas Island, <sup>9:30 A.M.</sup> after seeing Hubler and Anderson and arrived San Juan Puerto Rico. Mr. Julio Marrero met me and transported me to Moravia. Camped at property of Antonio Novila. B.O. Barahona Branch, Moravia R.R.

Moravia, Puerto Rico

Sept. 5, 1957

Worked Cueva del Perro (see map) for two days. Excavated

dark chamber as indicated. Removed approx. 4 sq yards of loose dirt. This room is relatively free of previous digging except removal of guano in center. This room could support 30 or 40 square yards of pay dirt which is stratigraphically in place. A light is necessary. The material from this cave is all from this room and represents undisturbed material from the surface to 4 feet deep.

profile of room.

Returned to camp, which was about a 30 minute walk. Photo

(570905-1) of the Novila family and (570905-2) of camp.

Sept 6, 1957

Continued screening as above. Photo (570906-1) of representative material from cave. Photo (570906-2) of Neosporites skull and (570906-3) of misc. bones and material.
