

the following frogs in pond below the dam.

<u>590613-1</u>	<i>Rana crepitans blanchardi</i>		
590613-2	"	"	(Corrosion prepared specimen).
<u>590613-3</u>	"	"	"
<u>590613-4</u>	"	"	"
<u>590613-5</u>	"	"	"
<u>590613-6</u>	"	"	"
<u>590613-7</u>	"	"	"
<u>590613-8</u>	"	"	"
<u>590613-9</u>	"	"	"
590613-10	"	"	"
590613-11	"	"	"

Photographs 590613-12 to 590613-16 of family in boat. Noted a crow pick up a dead fish from the surface of the water without alighting. 5 large *Natrix* swimming (singles) in lake, some along edge of shore others 50 feet or so from shore. Others on rocks at edge of lake and swam into water when approached.

Natrix more common as marked in red. These areas are adjacent rocky slopes which are covered with deciduous trees. There are good hibernating areas.

1 1/2 mi. W and 2 mi. S Lawrence, Douglas Co., Kansas
June 15, 1959

James, Mary and Annette and I collected the following material from fish ponds at the Fisheries Lab SW of K. U.

590615-1	<i>Acris crepitans blanchardi</i> .
590615-2	" " "
590615-3	" " "
590615-4	" " "
590615-5	" " "
590615-6	<i>Rana pipiens</i>
590615-7	<i>Terrapene ornata</i>
590615-8	<i>Eumeces obsoletus</i>
590615-9	<i>Thamnophis ordinatus parietalis</i>
590615-10	<i>Acris crepitans blanchardi</i>
590615-11	" " "

590615-12 to 590615-18 (exclusive no. 590615-14)

The *Eumeces* and *Terrapene* were under flat rocks which were associated with outcropping of rocks at brink of slope to north. Two *Terrapenes* together, one of them 1/2 size the other.
