

Haskell Bottoms, Lawrence, Kansas

March 27, 1960 (see notes March 9, 1959)

Made census of *Sigmodon hispidus* in same area as surveyed March 9, 1959. The season is considerably later this year (1960) than in 1959. The advance of season and disappearance of snow of the two dates above were the same with snows just having disappeared and the bottoms supersaturated with water. Snow remain in only isolated spot, especially old snow banks

10 used runways and all typically of the *Microtus ochrogaster* type trail, as compared to 108 trail as of March 9, 1959. Estimate ① *Sigmodon hispidus* and 56 *Microtus ochrogaster*, 23 *Peromyscus maniculatus*.
