

5.7/10 mi. S Tribune, Saskatchewan Co., Canada

Aug. 8, 1962

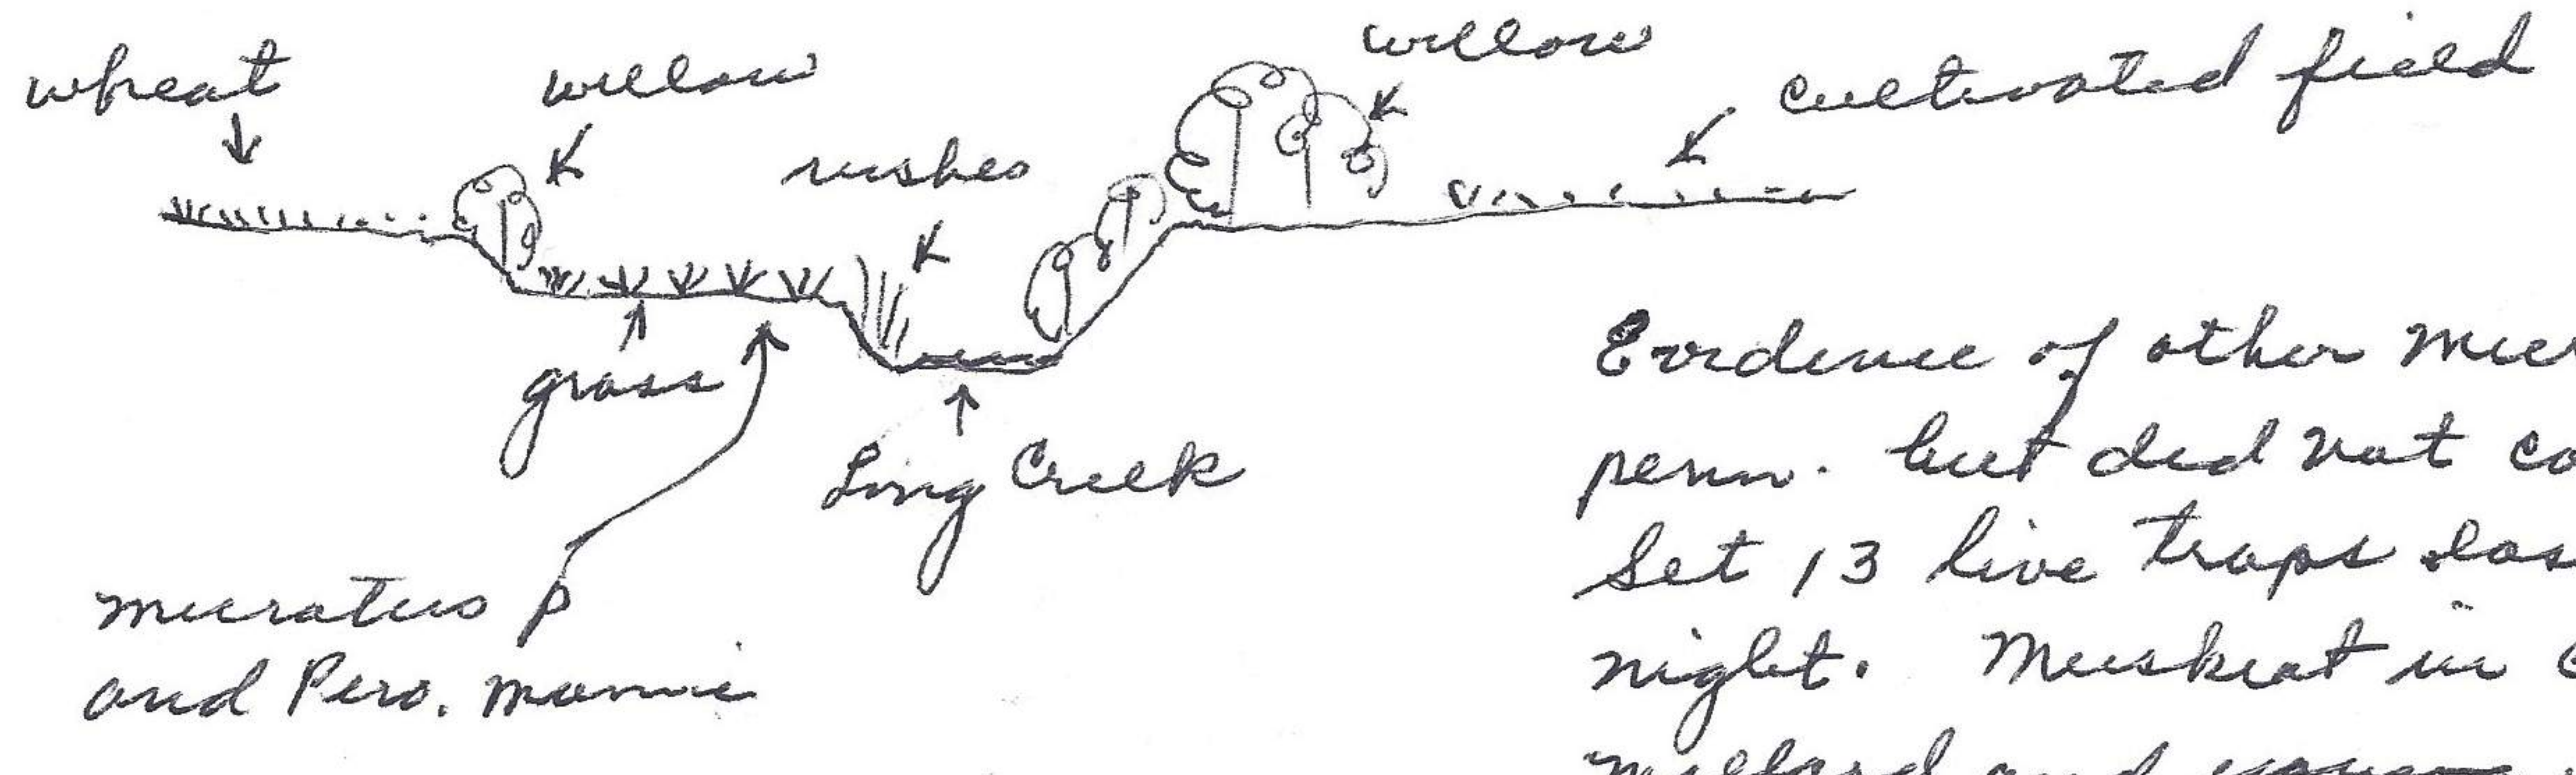

Left Long Creek Camp at 9:00 A.M. Mileage 96553.

From grasses along creek collected the following: (serological)

620808-1 *Microtus pennsylvanicus* - 10 grams of potassium ^(normal) _{ochalate} and 1 drop of merthiolate, 1 drop distilled H₂O. (See Aug 10)

620808-2 *Peromyscus maniculatus*. *ibid* (See Aug. 10)

620808-3 *Tyrannus tyrannus* - 20 crystals potassium _{ochalate} and 3 drops merthiolate, one drop normal saline. Pool of 6 birds.

Evidence of other *Microtus penn.* but did not catch. Set 13 live traps last night. Muskrat in creek. Mallard and young, noted

one large *Thomomys*. Photo 620808-4 of camp at the above camp. Chris & Polly at tent. Continued N to Regina, visited City. Photo 620808-5 and 620808-6 of yellow and varied colored flowers respectively at General Hospital to East. At museum of natural history photos 620808-7 of beaver exhibit. 620808-8 of Coyote young; 620808-9 of sandhill cranes and 620808-10 of barren-ground caribou exhibit.

Arrangement: The exhibits were backed by solid wall to eliminate reflection of opposing wall exhibit. The ceiling was flat and joined circular perpendicular wall which is a bad arrangement. Inside frame too conspicuous. Foreground did not blend into wall background and did not express mood. One floor diagrammatic and educational - not good for naturalistic interpretation. Cold room about 10 x 12. Scientific housing 3 mammal boxes, metal archeology & paleo

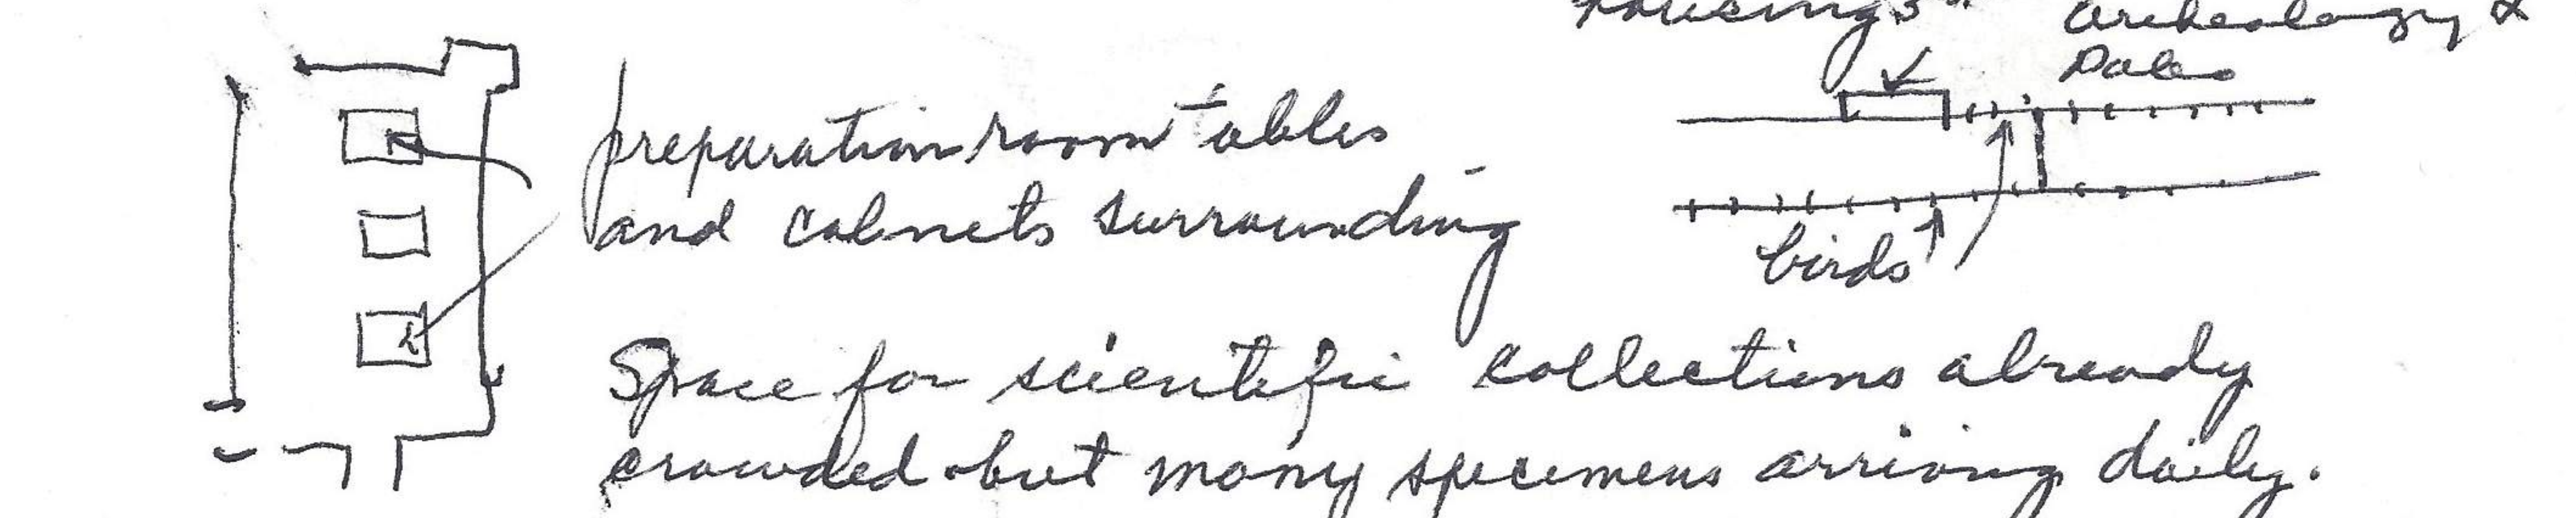

Photo 620808-11 of family in front of museum. Photo 620808-12 and 620808-13 of flowers at museum. Photo 620808-14 of Chris and Polly
