

(Photo 620812-15 as we arrived ^{from east} 620812-56)
arrived Revelstake, (Rotary Park 5 City) at 9:00 P.M. 97997.
Entire route in clouded condition (but visible for mts).

Revelstake, Alberta, Canada

Aug 13, 1962 (Monday)

Left ^{10:00} 9:30 A.M., highway 1, at camp took following photos.
620813-1 Camp; 620813-2, 620813-3, 620813-4, 620813-5, 620813-6, 620813-7 of Jay's ^{after 620813-7a-7b-7c} ^{13a, 13b, 13c, 13d} ^{along lake} ^{Photo}
620813, 620813, 620813 of ^{Chris & Jerry} ^{along lake} ^{Photo}
of houses in city with metal surfaces. Country west of crest
of range belongs to NW Vegetation Complex. A tourist in-
formant (Revenue Service living at Calgary) reported the
following: a. Calgary best climate in ^{western} Canada. At northern
limit of Chinook winds, more wind than at Edmonton.
Edmonton considerably colder both in summer & winter. Area
east of Calgary drier and more windy. Last few years dry. Nearest
Rocky mountains. On Malakwa area some bush trees
changing to yellow and some ground shrubs. First apple
trees noted 4 miles W of Malakwa. Canada has overextended
itself financially and new political program (austerity program)
will reduce expenditures. Color change fast in valleys.
No evidence on hillsides. Home in Malakwa Valley and
beyond are old and weather beaten. The wild grass is piled
in high columns  10 feet x 4 feet approximately. Rowen
not uncommon here. Photo 620813-11 of Lake Shuswap
from W. end to east near Salmon Arm. Eastern Kingbird
at Chase. First mourning dove ^{since} ^{scattered} ^{Jasper area}
at Chase. Country along ^{Bay} ^{Thompson} mainly
Ponderosa pine and open slopes of chert grass and sage brush
(junction 97 and 1). This valley is bordered by old lake
deposit several hundred feet high.

most of the lake level
deposits are unvegetated, others
in grass sagebrush. This
country is becoming more
and more like Columbia Gorge
on east end of Cascade mts.
Lower lined with a narrow,
sometimes isolated cottonwood trees. Horse country. This
valley certainly has an outstanding lake deposit on sides of
valley. The volcanic rocks of slopes may control vegetation
