

Sequence of events are:
Dad Chris + Jay

balanced serenely but alerted to passing boat.

James Robert strikes at bat to right

Dad swings to left. James & Annette counteract overbalance to left but not sufficient to overcome shift of momentum to left.

Annette clings to stern; Dad falls free of canoe; James Robert slide out of canoe but clings to canoe.

Chris maintains position at stern, Dad upright canoe and assumes upright position in canoe; James Robert swims for paddles.

This capsizing is one of exceptional circumstances, and would not happen under usual canoeing. In instances where three individuals are in one canoe, do not allow irregular movement of more than one individual at a time. Shifting of weight can be permitted only with knowledge of all members concerned. As a precaution, the extra paddle should be strapped (slip knot) to canoe; paddles being used are invariably lost in the commotion and with high wind will float away beyond reclaim. All items (including watch) in canoe should be made secured or made buoyant. Photos 640823-7 of Annette & James Robert after 'wringing out' after capsizing 8-9. Photo 640823-10 of personal effects dry out.
