

annoyed by man. Singles fed in quiet bays.

Junco hyemalis ^(sp.?) slate colored junco.

Singles fed among spruce & deciduous forests at camp.

Chordeiles minor night hawk.

One or two fed on lobes in evening, generally as singles
Canachites canadensis spruce grouse

Noted one group only (see notes). These 8 fed on ground and flew to low branches of trees. They could be approached to within 20 feet before flying.

Megascops alcyon. Kingfisher.

One or two seen per day at nearly all lakes. They did not call as frequently as in Kansas area.

Sitta canadensis. Red-breasted nuthatch.

Hard or seen regularly every day.

Warbling vireo (sp.?) One at camp on Lake III. Sang all morning up to 11:00 A.M. and then stopped. Inhabited island to west.

^{and mammals}
Birds that will be affected by man ^{by} ~~and~~ increase use of area would include: Common loon, red-breasted loon, black duck, Canada jay, raven, crow, gull, bald eagle, chipmunk, beaver, painted turtles and white-tailed deer. These are the kinds of animals that are attracted to camp sites or are annoyed by the presence or passing of man and canoes in the area. The common loon was being displaced continuously by passing boats as was the flock of young mergansers. Concentrated use of certain areas may preclude the nesting and feeding activities of the bald eagle. While beaver are mainly nocturnal, they are annoyed by canoes. Painted turtles that spend considerable time sunning on logs are always dislodged by passing canoes and especially those ^{individual canoes} fishing near the edge of the lake. Forbidding of the black duck has produced a bird that is not at all like the wild ducks that are away from the travelled routes. Chipmunks, Canada jay and crows has completely changed their normal feeding activities because of the solicitation of man for their presence around camps. Overfishing for northern pike has produced a fish population that is out of balance with the natural population. Natural populations of plants are being completely changed at camp sites. One week at a camp site will trampled ground cover and remove dead firewood timber.
