

2 per cone, 3 per cone less desirable.
 light weight stove worth its value in extremely cold weather
 and in case of emergency sickness.
 eliminate:

small unimportant items.

excess rope & string

extra food

excess fishing leuro.

chairs (if built up packs are used) Provide dry sand paper to strike matches
 waterproof against atmospheric moisture. ^{in wet weather}

matches - several small containers and do not use until needed, otherwise when
 opened they collect moisture & are damaged.

extra flashlight. ^{heeb} and 2 sets of batteries per 2 weeks
 heavier axe

2 saws in case one breaks.

1 cup detergent per week

1 ~~change~~ (SOS) pad per day.

nylon dish rag (use dry immediately)

extension handle for fry pan & plate.

repair fishing reels & poles.

Under most climatic conditions, in the northern Minnesota area, a light weight tent with open ventilation is adequate and comfortable. There are times, however, when low temperature, snow & rain, are uncomfortable if a open type tent is used. The best principle in a tent is to construct it for bad weather, being draft proof and completely closed. Provision should be made so that in hot weather, it can be opened up for proper ventilation. A tent should be large enough so that one can move about without touching walls and high enough for ^{establishing} layer effect of heat. A tent 6 feet high is better than one 3 feet high, especially if a stove is used. Stoves is a good emergency precaution if sickness or casualty occurs. In cold weather or when wet, a stove is comforting. Stoves require the minimum of fuel, about 1/20th or less the amount used in an open fire, especially when cooking with a reflector over. Ground cloths (plastic) are better than built-in floors in tents, as they can be dried & cleaned separately. When a tent is completely closed for comfort, a plastic window should be provided. In warm or fair weather an extension should be provided so that the door can be left open, even when raining. Cloth of tent should be white to let in light. A dark tent is psychologically uncomfortable unless light from lamp is provided.
