

640907-96
conditions, on
forested areas. They remind one of trapped ⁶⁴⁰⁹⁰⁷⁻⁹⁶
way to Lake View at a point about 2/10 mi. N of Hall Mark
Co. at pond at about 20 min before sundown, noted thousand⁽³⁾
of grackles & blackbirds flying east. They formed a long
interrupted line of birds with some flocks 150 feet wide and
40 feet high (compact) to single birds, but all flying
across the pond to points E. Between this place and
Lake View noted 2 striped skunks killed in road, one about
one mile W of Hall Marks and one about 4/10 mi. SE of
Lake View. Was informed today that Kentucky bluegrass is

difficult to grow in hot summer weather but stands winter
temperature and come up again in fallowing spring. Rye
grass tolerates hot summer weather but is easily killed in
winter.

A fox squirrel at 1620 Tennessee was injured
by car to the extent that it could not use back legs. It
could move over ground but could not climb trees.

Tonganoxie State Lake, Kansas

Sept 12, 1964

The superintendent of Lake said that a timber rattle snake
measuring 52 1/2 inches was collected from the W side of lake

at edge of lake. This snake was taken about 1 month ago. One
week later a group from Shawnee Wyanotte, Kansas collected
40 Copperheads from the timbered slopes on west side of lake.
Haskell Bottoms Trip via 19th, 50th R.R. to Wabarena, Lawrence, Kansas

Sept. 13, 1964

of trees in Haskell Bottoms at approx 4:15 P.M.

Lawrence, Douglas Co., Kansas

Sept 19, 1964

Robins in groups and noted as such for first time this season

Oct 1, 1964

First noticeable and conspicuous change of colors. Poison ivy
completely turned to yellows and reds. Some plants under
forest drooping.
