

LAMPASILIS ANODONTOIDES ANODONTOIDES

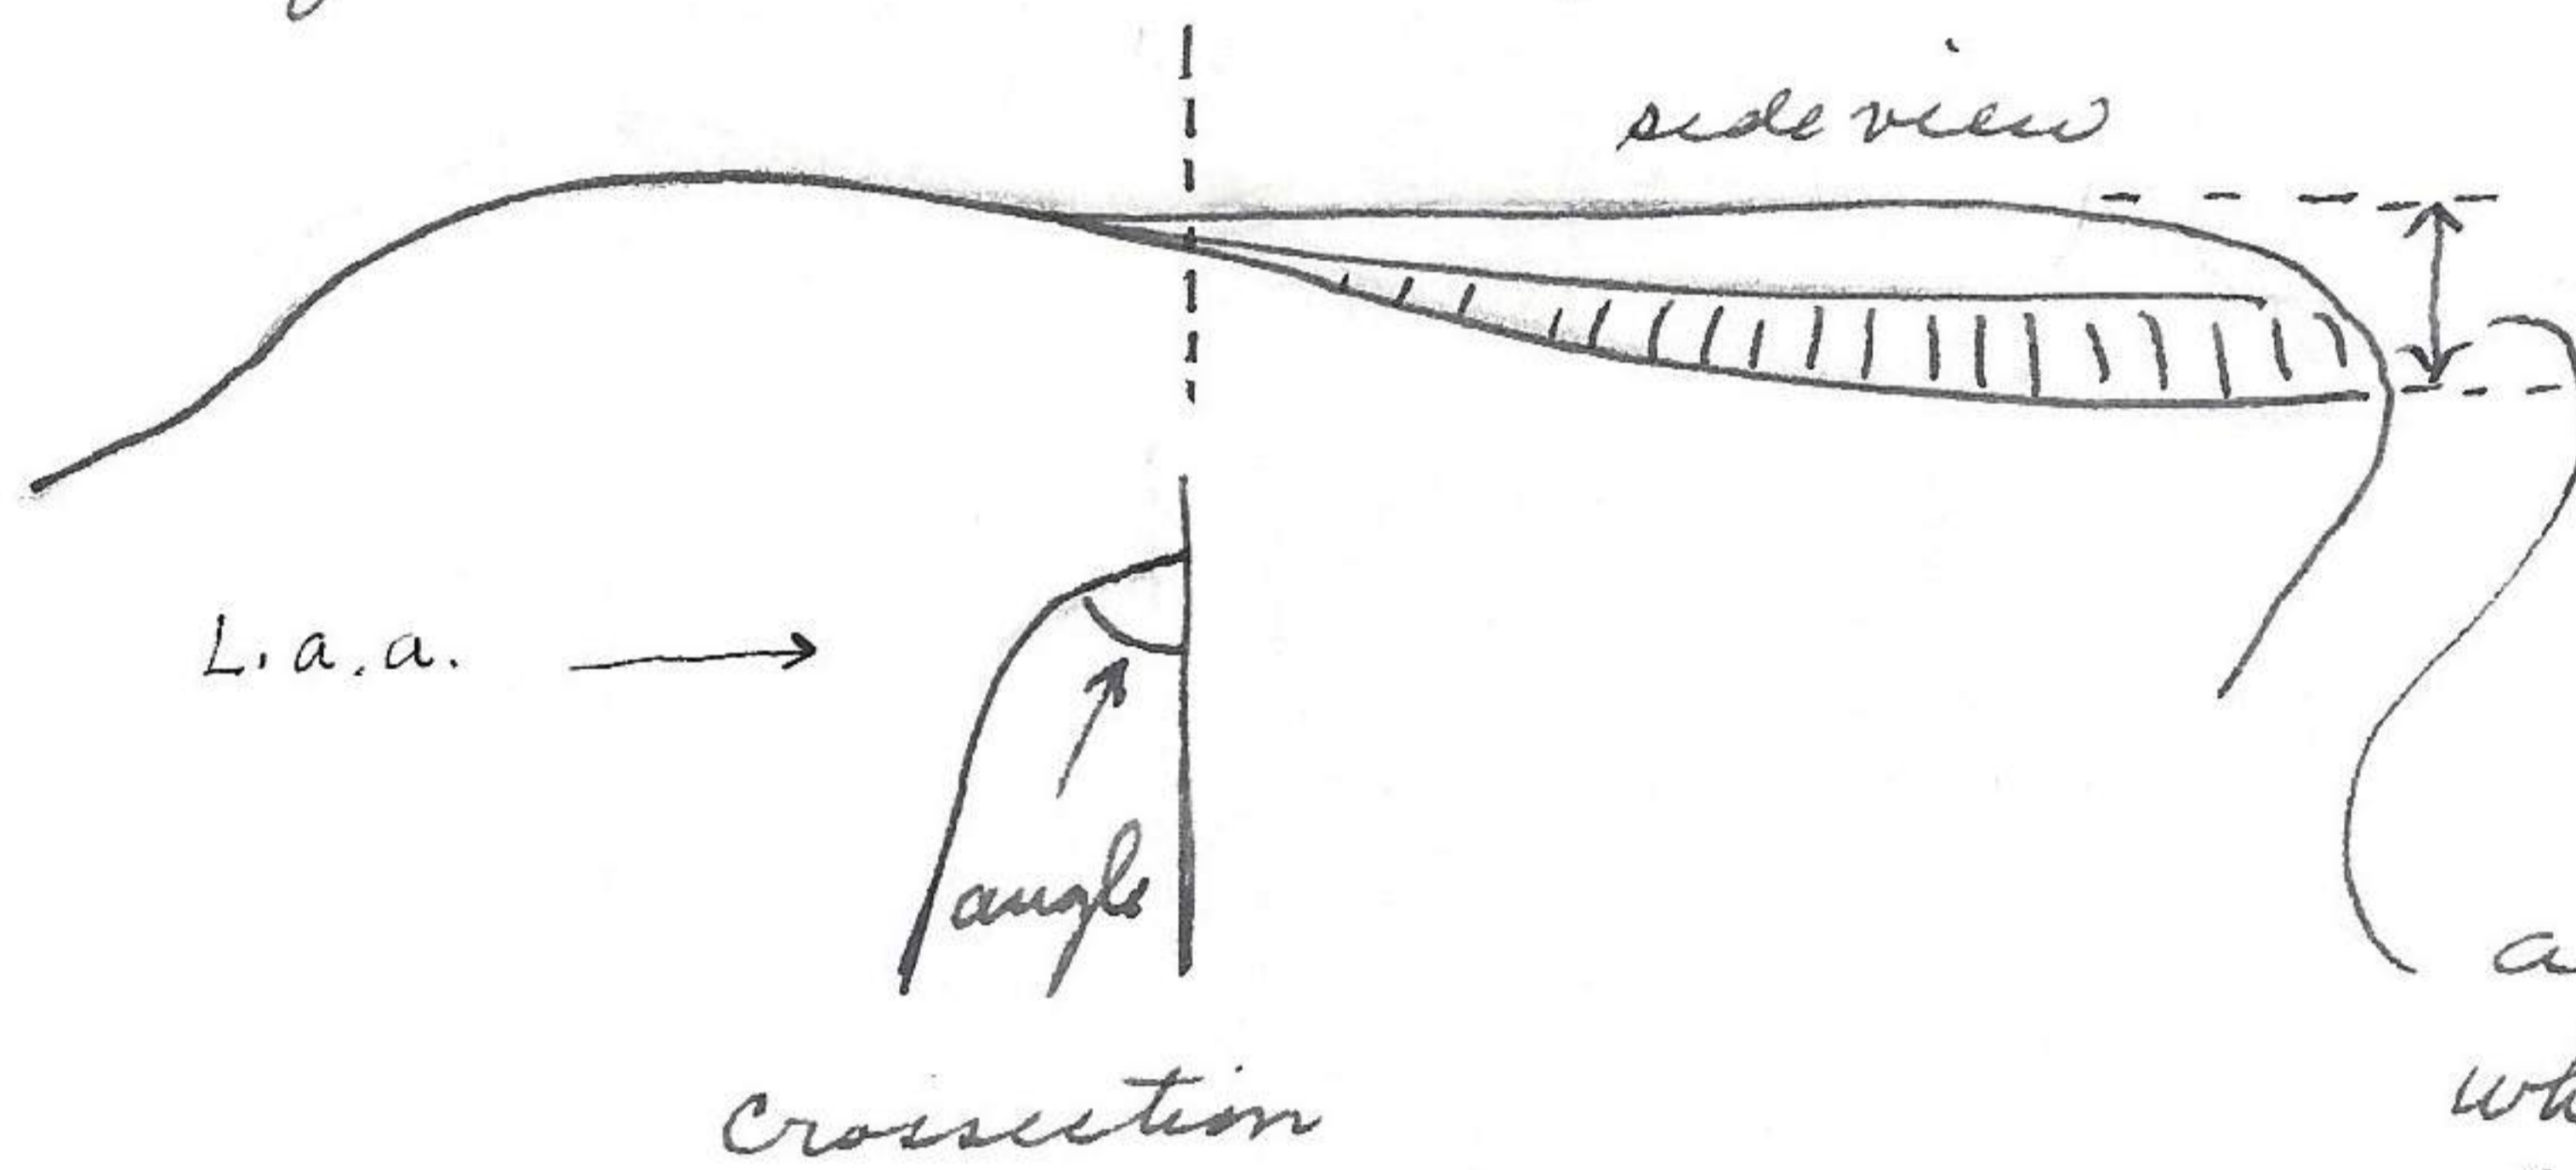

sculpturing with widely spaced, slightly diverging lines to posterior. anterior lines more closely spaced and short in length. Lines do not transgress on hinge slope of posterior ridge. Outer lines incompletely formed

660723-27

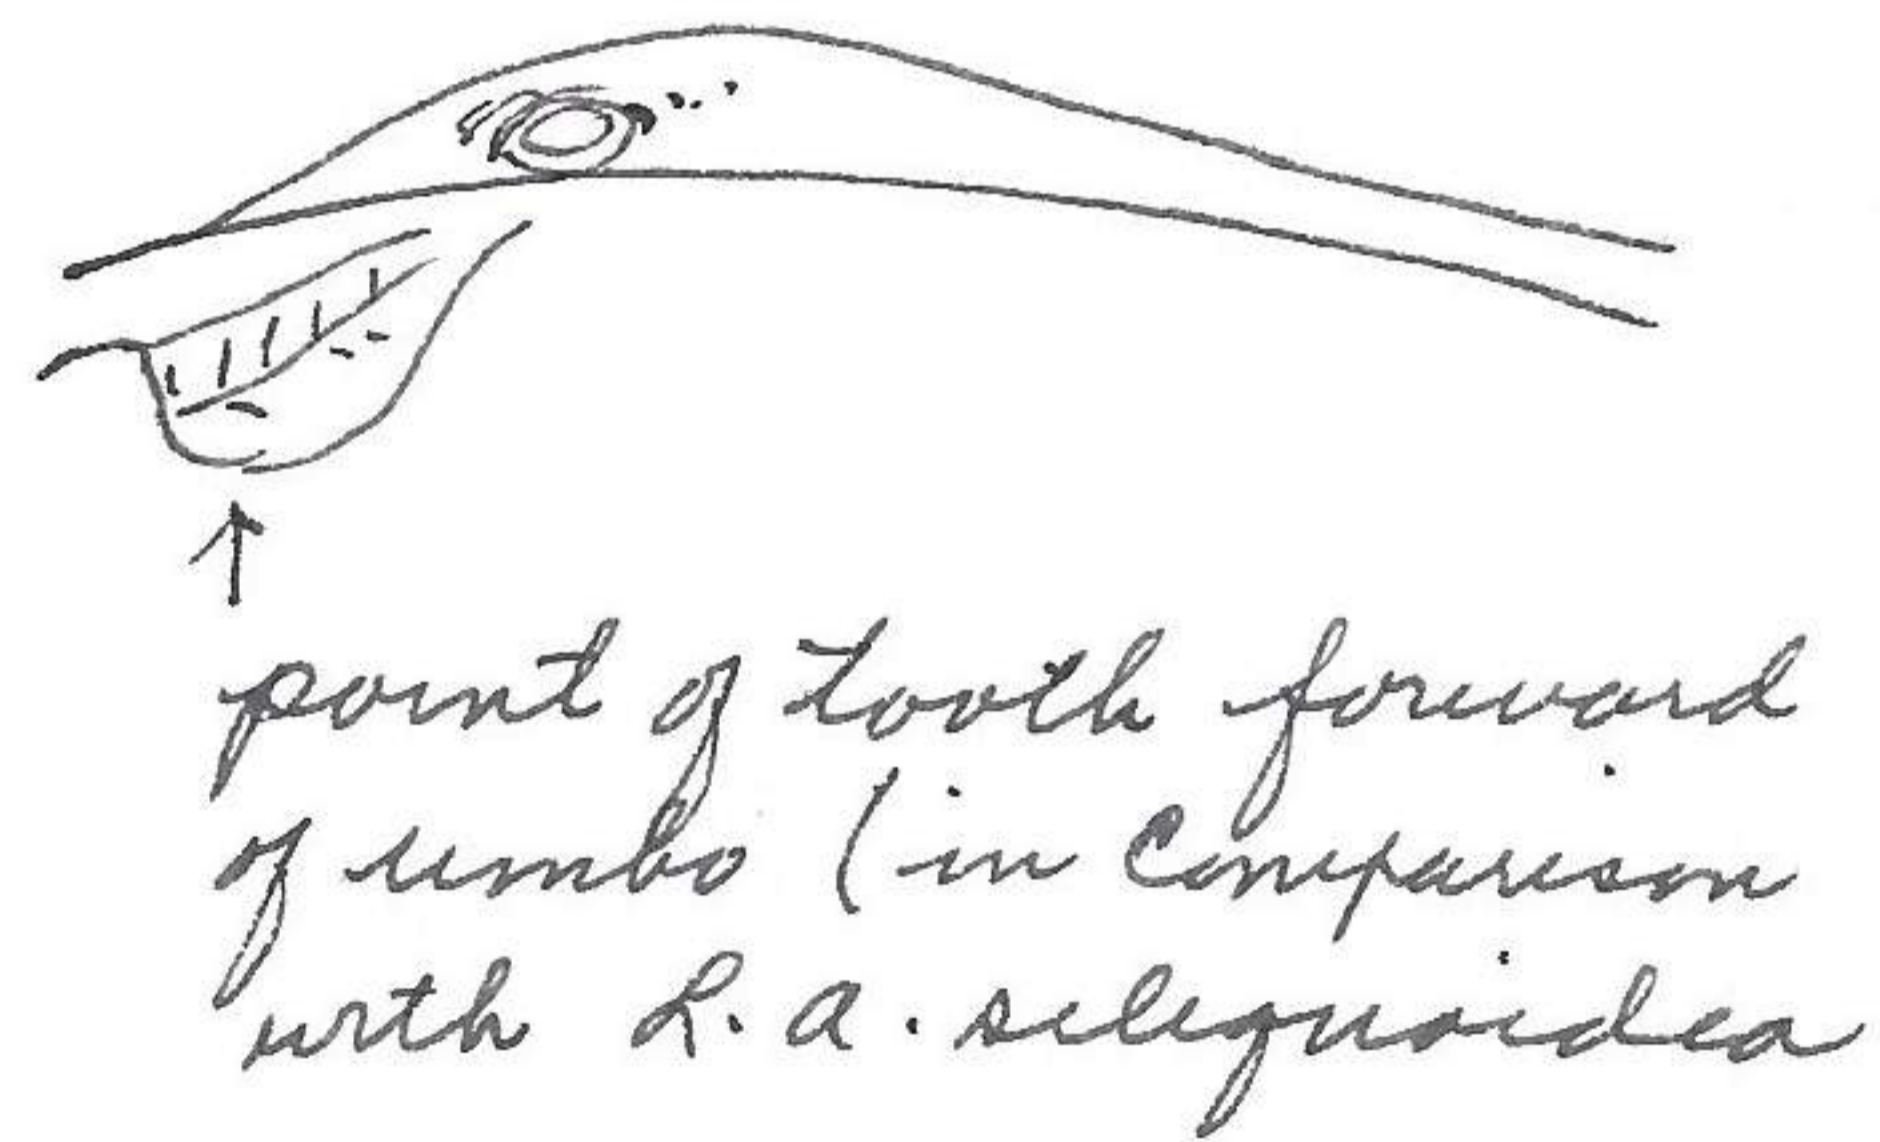

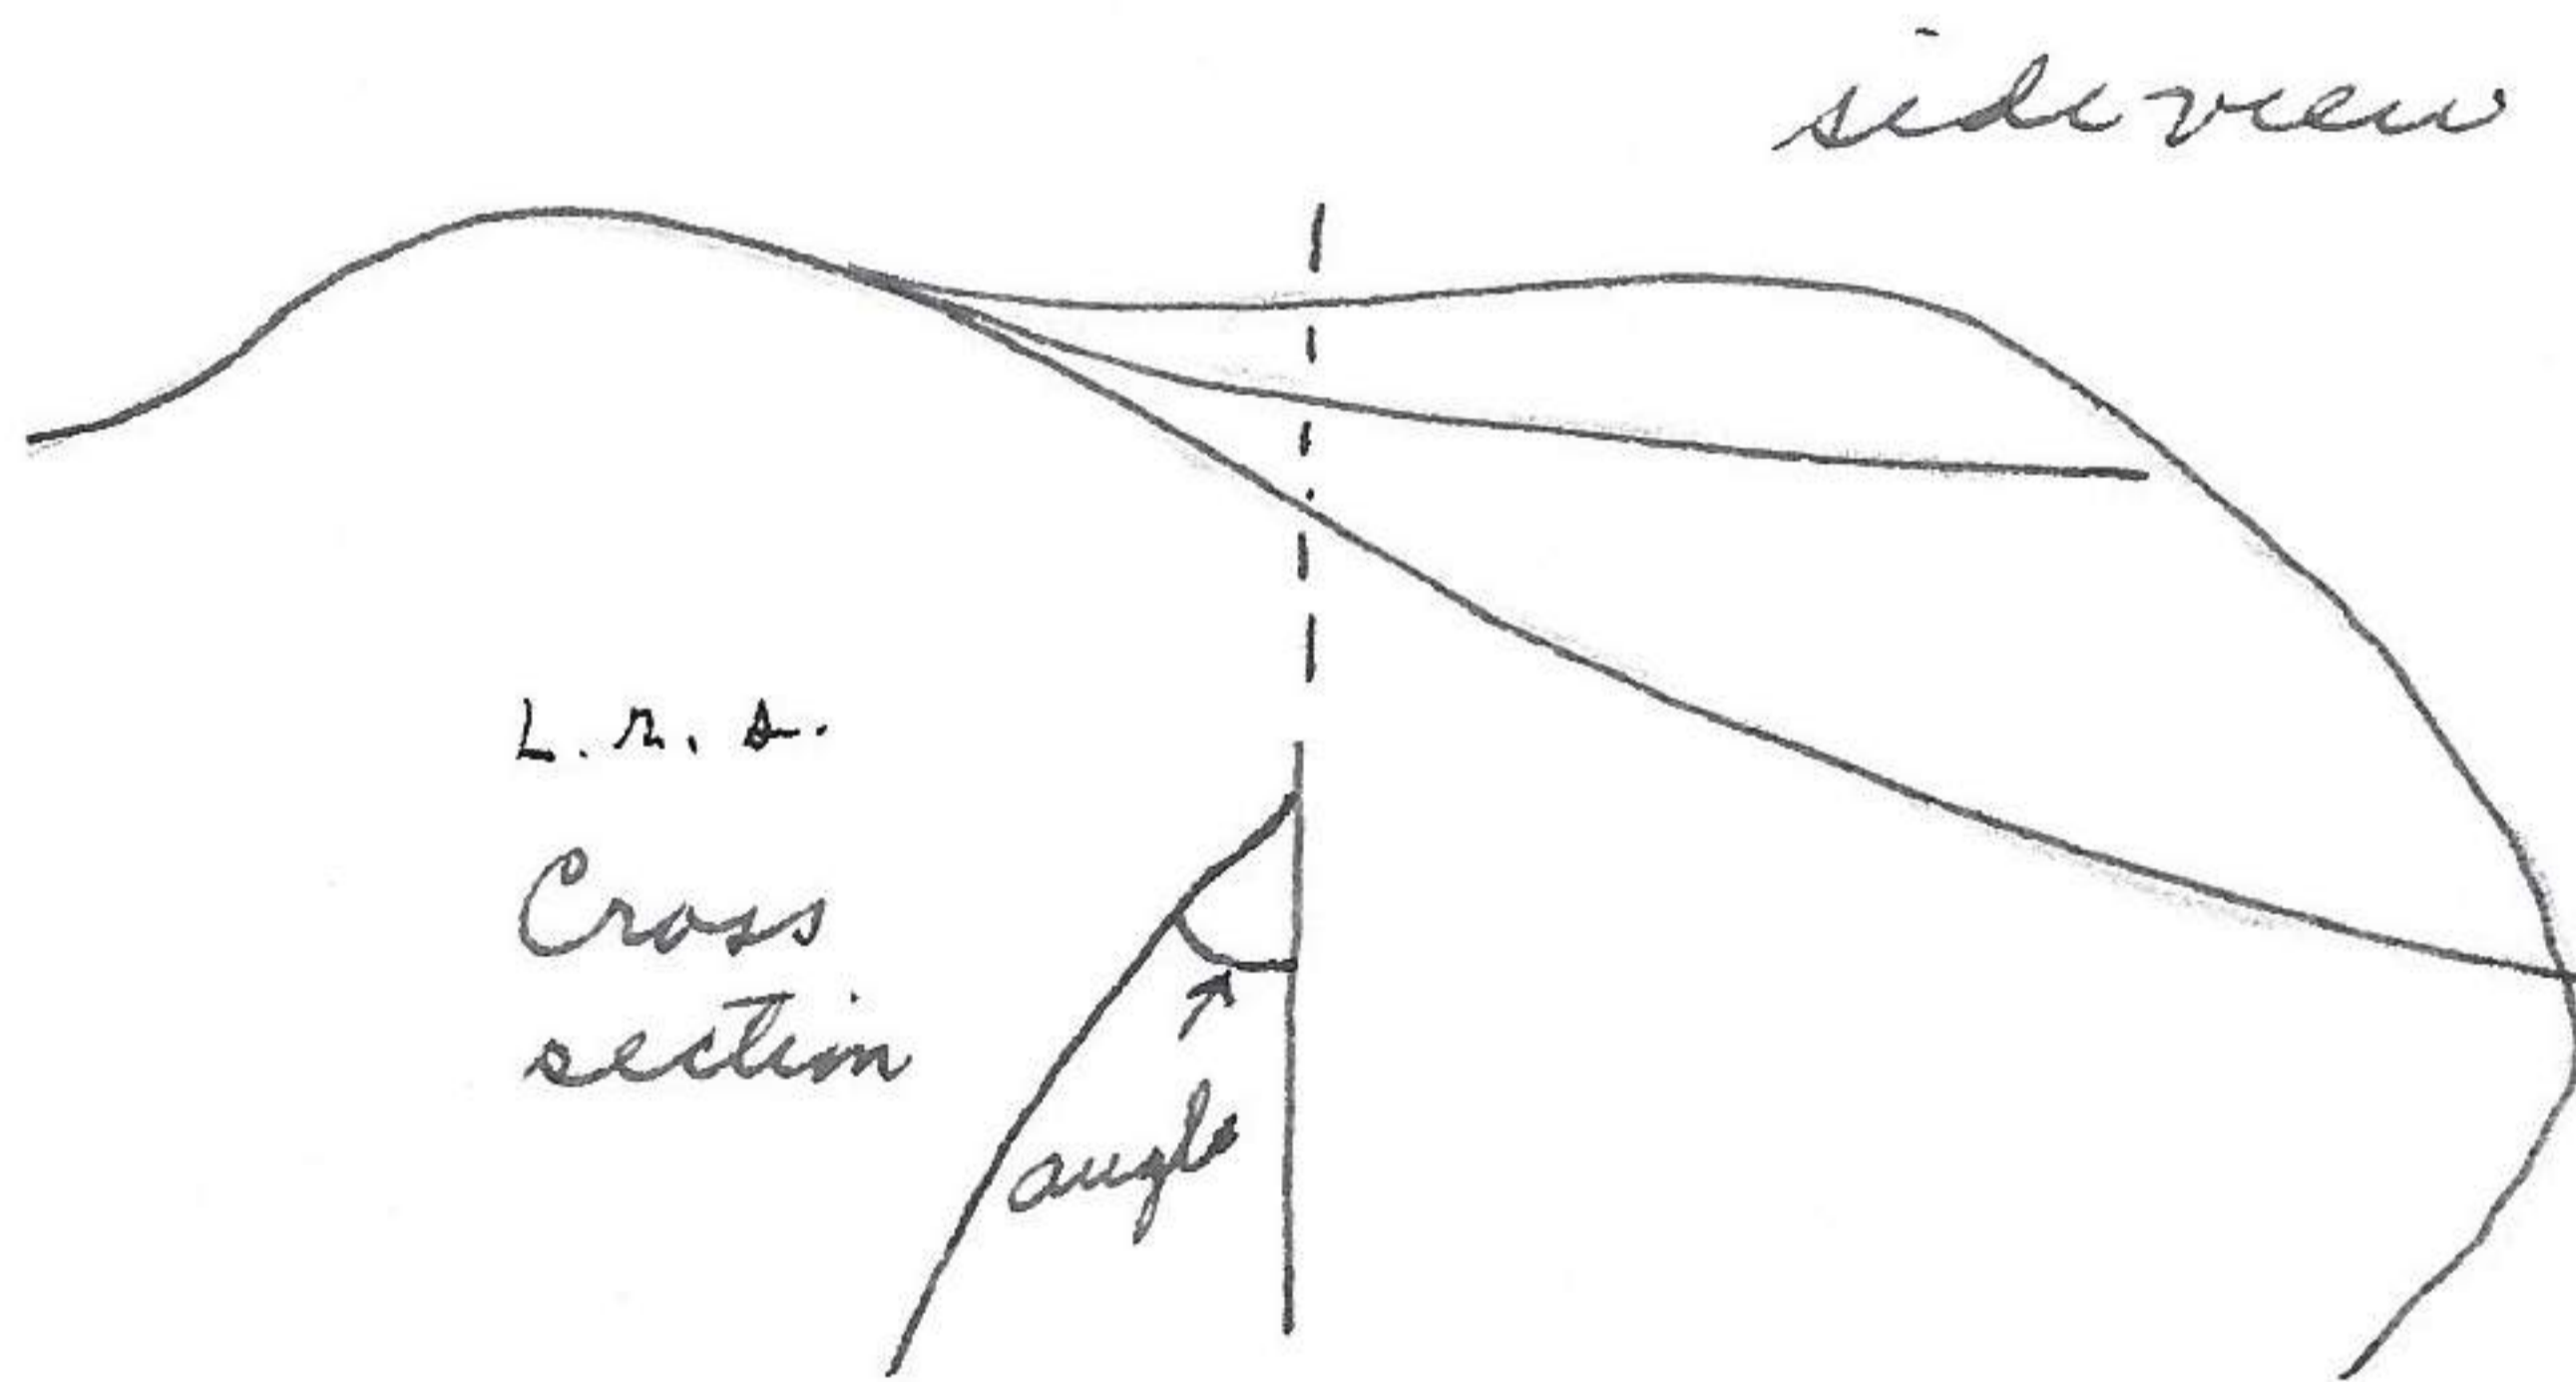

SCULPTURE ON UMBO

posterior ridge close to hinge line and as a result produces a greater angle than does *Lampisilis radiata siliquoides* (see below)

This means that when shell is viewed from inside with vision 90° to perpendicular shell.

a good measurement when comparing with *L. a. siliquoides*

*L. r. siliquoides* for comparison
