

1620 Teun, Lawrence, Douglas Co., Kansas

Feb. 24, 1967

Noted a gray squirrel collect a leaf of a magozone and after lodging it in its mouth travelled 300 feet to its nesting tree. This is the same behaviorism as the case of a red fox squirrel of Feb 10. in the same area. This may indicate a difference in breeding period of these 2 species of squirrels. One Feb. 17 noted 2 sparrow hawks at the N end of Sellards Scholarship Hall. They were calling. Have noticed them there on various days since then.

Tonganohie Lake, Leavenworth Co., Kansas

Feb. 25, 1967

Took Mary to Millers Cabin on Tonganohie Lake via Midland Temp 33°F, clear, high cirrus clouds 50%. Spotted skunk road kill at Serloin State Restaurant N Lawrence. At Midland <sup>99.8</sup> 11:30 and will keep complete bird census to Lake. Mud Creek 01.2 98 per cent frozen. Ponds frozen 1/2 with new ice and rest from old ice. Horned larks 6, Chickadees 2, Crows 4. 06.6 Crossing mud Creek at base of hill. juncos & cardinal on slope. Top of hill on uplands 07.1, horned lark, 3 crows, ponds frozen, rare snow drift. 12.4 now to N. 15.0 Mc Louth. horned lark, horned lark, loggerhead shrike. 23.1 leaving highway 16 now to lake. 24.4 Tonganohie Lake. Some snow on north slopes. Only open water on lake about 200 x 10 feet just N of boat dock. One male mallard and 6 male green-wing teal in open water. Visited Dr. Miller and family and returned via Tonganohie. Between Lake & Tonganohie noted 1 striped skunk road kill. Between Tonganohie and Lawrence 3 striped skunk road kill and one sparrow hawk (live).

Kaw River, W Eudora, Douglas Co., Kansas

Feb. 26, 1967

Annette P. and I hiked along river, south side, and made the following general observations. Day from clear sky to cloudy and windy. Temp change about 2:00 P.M., abruptly, to cool and uncomfortable. Water lowest I have observed and valley 50% sand. River shallow and main channel narrow. Water clear to bottom. Side channels filled with clear water with bottom covered with green and yellow
