

Sand Bar NW Eudora, Douglas Co., Kansas

July 10, 1968

At a point 1 mi NW Eudora at a place 3/10 mi E of the NW corner of sec 5, T13S, R21E, collected the following Cremulida

680710-1 to 680710-16 Cremulida

These beetles were on damp soils bordering the Kaw River and rare on the dry sands beyond. This form occurs in higher concentration than does the Cremulid which it closely resembles and is found on narrow beach between the river and sandy cliffs elsewhere on the Kaw where it is solitary to small groups in community composition.

One of these beetles flew out to an island of rocks in middle of river some 60' beyond. All others would fly out over the water for some 10' and then back to land.

Small toads on sand and at edge of river ranged from 1/4 inch to 1 1/2 inches in length.

Being about sundown, many swallows arrived and flew over water for both feeding & drinking. Barn swallows dominated over bank swallows.

Lawrence, Douglas Co., Kansas

July 10, 1968

Noted 2 Cicada killers this afternoon. They are searching lawns.

E Lawrence, Kaw River, Douglas Co., Kansas

July 11, 1968

At a point 3 3/10 mi. E and 4/10 mi. S Lawrence (P.O.), Douglas Co., Kansas collected the following insects.

- 680711-1 to 680711-10 Cremulida
- 680711-11 to 680711-15 Cremulida
- 680711-16 to 680711-17 _____
- 680711-18 to 680711-19 June _____ Toad bug.
- 680711-21 Beefs _____ June beetle

The Cremulids 680711-1 to 680711-10 were on narrow damp beach at base of cliffs. Beach about 4 to 8 feet wide. For some reason, they were most difficult to capture. One robber fly in area. Followed beach for approx. 1/10 mile and collected 10 Cremulids and observed approx 10 others. Young Beefs ranged from
