The above mammals were taken from 3 variations of plant community. The zoprus, microtus were from wet high plants in a channel bordering the main creek. The *Peromyscus* were mainly from bases of large ^{old} spruce, fir and other riparian vegetation, an area I would expect *Clethrionomys*. The dry area of hillside of yellow pine, fir, some spruce and ground cover of dwarf juniper yielded one or two *Peromyscus* only. Birds in area were hairy woodpecker, Clark Crow, a thrush, robin, chickadee and a large flycatcher. The golden-mouthed ground squirrel, chipmunk and *Tamiasciurus* at camp. Prepared specimens and left camp at 1:00 P.M. and drove up to Hour-glass Lake. The trapping area is 1/10 mi. N of Hour-glass Lake, Albany Co., Wyoming. Set 125 traps in alpine meadows, along open creek and in forests.
