

Divide, between Sprout and Kennedy Lake, Vancouver Island, British Columbia, Canada. [Sutton Pass]

Aug 6, 1970

Collected the following mammals from traps set last night:

	<u>700806-1</u>	<i>Peromyscus m. interdictus</i>	210-120-24-19-29 gms.	♀	2x2 emb 15mm
	<u>700806-2</u>	"	199-105-23-20-23 gms	♀	plac. scars.
	<u>700806-3</u>	"	208-108-24-19-24 gms	♀	wt. normal
	<u>700806-4</u>	<i>Peromyscus maniculatus</i> <sup>angustus</sup> <del>interdictus</del>	[126]-[36]-19-18-20 gms	♀	wt. normal
	<u>700806-5</u>	"	204-111-24-19-22 gms	♀	plac. scars
	<u>700806-6</u>	<i>Peromyscus maniculatus</i> <sup>angustus</sup>	179-88-20-19-22 gms	♀	plac. scars
	<u>700806-7</u>	"	167-81-21-18-16 gms	♂	testes 8mm
SK. ONLY	<u>700806-8</u>	"	162-78-21-18-20 gms	♂	testes 10mm
"	<u>700806-9</u>	<i>Peromyscus</i>	170-88-23-18-21 gms	♂	testes 3mm
"	<u>700806-10</u>	"	164-84-23-18-21 gms	♂	testes 5mm
"	<u>700806-11</u>	"	173-91-24-18-20 gms	♂	testes 4mm

These animals were from climax forests and edge at first open field E of divide. 50 traps were set in sedges <sup>(25)</sup> and 25 along edge of willows. The remaining 50 were in climax forest on slope among large boulders <sup>in forest</sup> (some 30x30). Ground covered with <sup>down</sup> mosses, ferns and typical ground cover of forests. Trees were cedar, hemlock, Douglas fir, mt. ash etc. *maniculatus angustus* was at edge, nothing in sedges and long-tailed *Peromyscus* <sup>maniculatus interdictus</sup> in climax forest. Deer tracks were common in slopes surrounding residential pond (6x15'). Bear tracks also in sand and mud. When traps were collected a bear track (hind foot 8" long from buck to end claws had stepped on my fresh foot imprint made 10 minutes before. I had heard just shortly after some rocks falling on side of road grade some 200' beyond. This meadow apparently is flooded periodically because of drain interference by road construction. This A.M. temp 58°F, min 55°F. At pond at trapping area observed 28 band-tailed pigeons, 5 Stellar jays, 2 robins, 4 slate-colored juncos. This is an area of aggregation of birds for feeding and watering. Berries of several varieties on all slopes. Left camp at mileage 878 at 11:00 A.M. for W. Coast of Vancouver Island. Arrived at Ucluelet at mileage 915 at 12:15 P.M. Enroute are 3 lakes at different elevations or step down. From Ucluelet continued N. to Longbeach where we camped at northern end of beach at rock barrier before last segment of beach.
