

JOURNAL 1972

JAMES W. BEE

JOURNAL 1972

Hidalgo, Mexico

Jan 1, 1972

Left 45716 at 9:00 A.M. for Monterrey. Sky 90° in clouds. Palm cacti increasing in number and size as one travels S. The sparrow hawk becomes increasingly more common and between here and Monterrey would estimate there being 80 birds. ^{Telephone} lines were special places for perching and where present contributed to greater number of birds observed. There were approx 8 mourning doves and small birds on the average of 10 per mile. At the top of the canyon where road runs observed 6 black vultures and 18 crows. The crows were more common from here to Monterrey than elsewhere and increased in some direction. Boat-tail grackles common. At Monterrey visited Arturo Jaimesez of the Universidad del Nuevo Leon. Also at the Univ met Dr. Philip an ornithologist from Mexico City and the Ichthyologist Señor. Bob Patterson and John Pizzimenti were also there and organizing for a feed trip S of Castillos for prairie dogs. Had dinner at Arturo's father's home. Fernando is a promising student for graduate work, has grant support and good academic standing. In evening 3 Turkey vultures flew or rather sailed on motionless wings to roost on way to roosting site. Mileage at Monterrey 45772. Slept in trailer in front of Arturo's home.

Monterrey, Mexico

Jan 2, 1972

Crows moved N from city at daybreak to about 8:30 A.M. Boat-tailed grackles common in city. Annette recorded the following as impressions of Monterrey. "A rising middle class, but still a preponderance of poverty. There are many potentially good houses in disrepair or standing empty and disintegrating while in the same neighborhood the poor live in makeshift shacks. There are many beautiful homes in the city and on the outskirts. Many new homes and business buildings and industries are being built. Apparently there are no

zoning laws. There is a rapidly developing pollution problem from vehicle exhaust and industrial waste and emissions. There are many older cars on the streets obviously kept functioning by great effort, but also with great pride as they are repainted and extremely clean.

The Jimenez family is a good example of the rising middle class. The immediate family is of the first importance with the larger family group closely following. The home comes third in importance - sometimes fourth when a man's personal interests and work are involved. This presents a problem when the position of the wife and children are considered. While each home observed had a maid to help out, the maid was a very young girl who was a "jack of all trades"; and since food is prepared mainly from "scratch", the wife spends much of her time preparing it. The maid spends much of her time at mealtimes running to the neighborhood grocery store for forgotten items. The quality of the foods served was excellent. Apparently this stratum of Mexican society prefers the wife in the house, and places her in a limited and rather secondary place of importance.

Today we visited the home of the father of Arturo Jimenez Guzman for a free day of new year fiesta. The following pictures were taken.

720102-1 prior to fiesta we visited the home of Arturo's twin brother (a doctor) on SE side of town at base of saddle mountain. Annette with dog in backyard of his home. Arturo will build near here.

720102-2 Arturo & twin brother at backyard of above home.

720102-3 saddle common in area.

720102-4 saddle mt. and poinsettia in above yard.

720102-5 street band entertained the group. Maracas a can with stones.

720102-6 Father of Arturo.

720102-7 member of street band

720102-8 Robert Patterson of Lawrence.

720102-9 Raymond, Arturo's child. Named for E. Raymond Hall, and maid

720102-10 4 nephews (Arturo's son in yellow)

720102-11 Cow head just retrieved from pit fire. Cooked 24 hrs in agave leaves and barlop.

720102-12 " " being relieved of meat.

720102-13 Arturo's twin brother finishing the cleaning of meat of head.

720102-14 Children served first of meat, then adults.

720102-15 " " " "

720102-16 Arturo and twin brother

720102-17 " and 3 brothers, left to right - Arturo, the dentist, Arturo's twin brother and in background is Fernando

720102-18 initial removal of agave leaves of ^{second} cow's head.

720102-19 Arturo dancing with the children - Highland fling.

720102-20 Children lined up for penata.

| 720102-24 | Raymond, son of Arturo Jimenez (no negative) | |

The Jimenez family hospitality was warm and family friendship within the "clan" close. Arturo said they tried to have a family "fiesta" once a month to keep up the old Mexican custom of family solidarity. For the new year's midnight celebration they stuffed a large pork roast by making numerous slits in the muscles & stuffing them with olives, and peppers, and small onions in the slits. It was roasted in a normal fashion in a regular stove - (electric). This was prepared entirely by the women of the family with much social reaction and interaction, family gossip, etc.

The ~~same~~ ^{next} day the men prepared 2 barbecues - the first a simple "Rabob" type on metal stakes & chunks of pork & beef alternated with onion and green peppers cooked over an open pit in the Robert yard using charcoal. The day before the men had prepared a cow's head by skinning them, then washing them, then spicing them and wrapping them first in agave leaves & placing them in gummy sacs. These were then placed in a deep pit with hot coals?

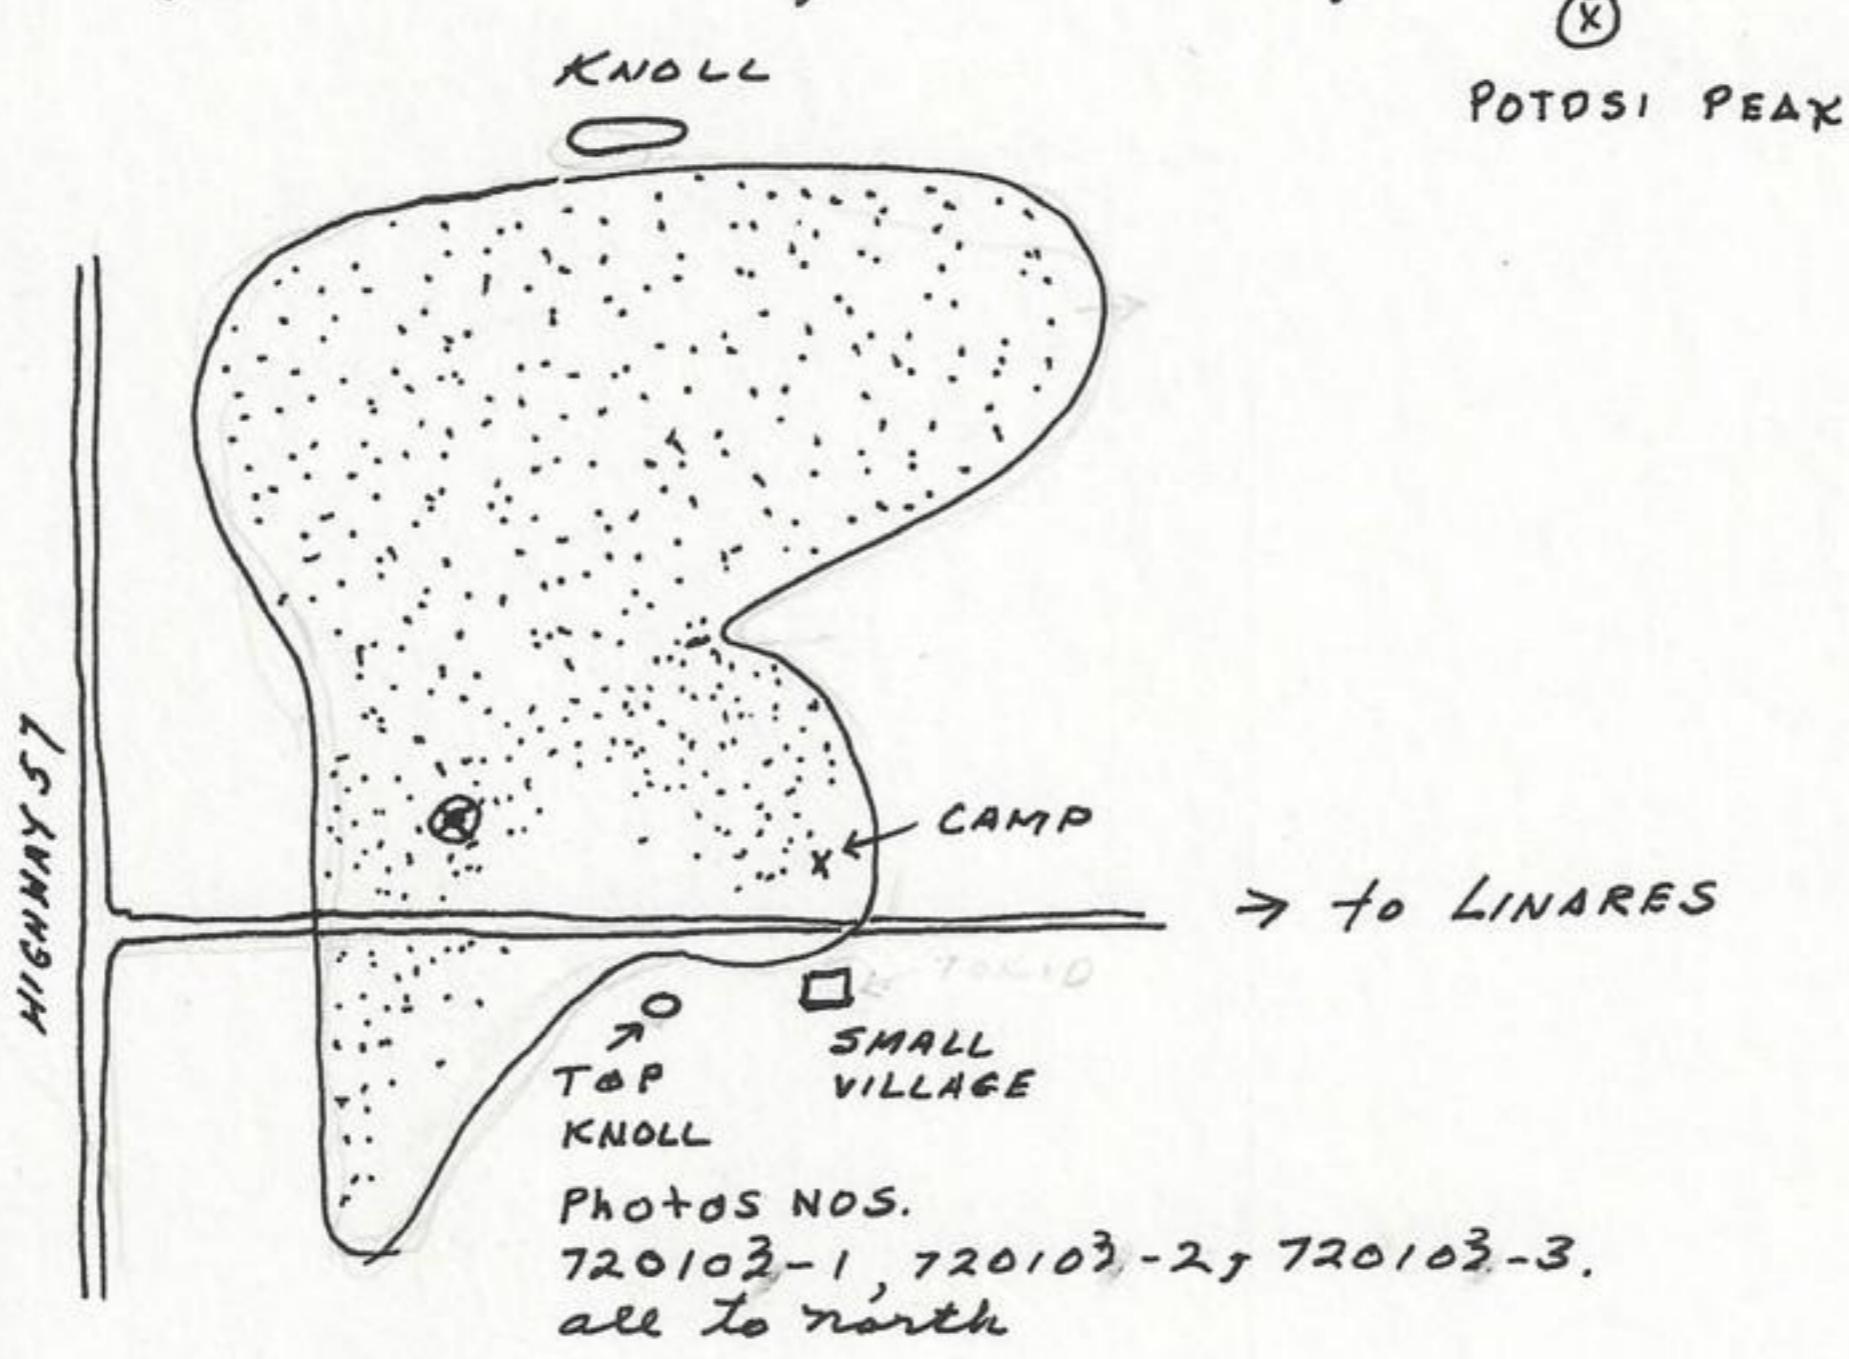

and were steamed for 18 hours in the covered pit. This "barbacoa" was for the family fiesta the next day. While this was being prepared, another group prepared beef tripe, cleaning it and cutting it into small pieces, then it was simmered in a huge pot in the court yard in water with numerous spices. This was another dish served with the barbacoa, called manada. It all proved to be most tasty, and James was given the delicacy of one of the cow's eyes which he said tasted indistinctly from the other muscles!

After the feast ing a little street band of a grandfather who played the saxophone, and 2 grandsons, one with a tin can containing stones for a maraca, the other with a small set of drums. They played Mexican folk songs that the children danced to. Asturias and a few of the other adults joined in and taught some of the children the steps. Then Fernando and another of the adults strung a colorful piñata on a rope & swing it from the house roof to the opposite wall shaking it while the children tried to break it with a stick. The youngest and smallest tried first but it was the older ones who were successful. As soon as the candy fell out there was a wild scramble to get as much as possible.

Left Monterey at mileage 45772 at about 6:00 P.M. drove in dark to Linares turnoff where we camped at 3 mi. to E. at mileage 45913.9 Patterson, Pizzimenti and Jimenez camped with us. From our camp the village of Tokio is $\frac{1}{2}$ mi. to the S.

Highway 57, Linares turnoff, Mexico. ($\frac{1}{2}$ mi N Tokio, Nuevo Leon)
Jan. 3, 1972

Breakfast for group before departure. Prairie dogs become active by sight and sound at approx 9:00^{A.M.} when sun out from overcast. Counted 6 animals at that time. Left camp at 9:15 A.M. and from top of knoll on S side of road made survey of prairie dog ~~hill~~ colony. Temp last night 46°F

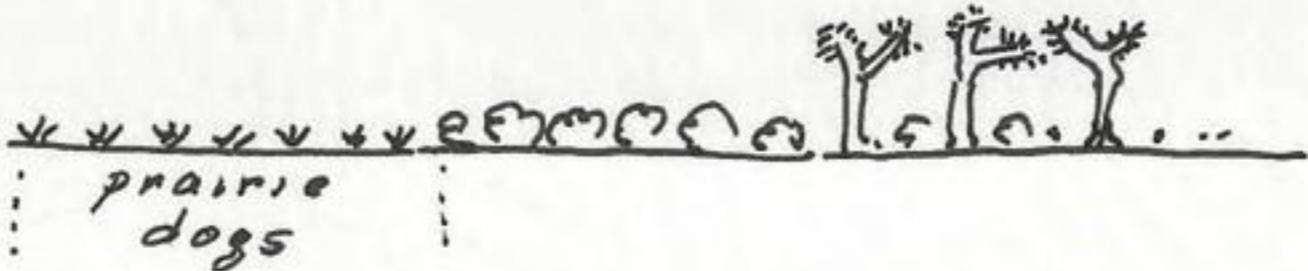

(45914.5)

From the knoll estimated number of large conspicuous mounds by three different methods and came up, in each case, with a total of approx one million. The colony is characterized by uniformity of community, noted 15 prairie dogs active nearest road but area beyond was too far for 10x. Photos 720103-1, 720103-2 and 720103-3 all from top of knoll (first level) showing extent of colony and general topography of the land. No hawks noted in area. Noted one colony of holes closely spaced and of newer construction than other surrounding areas (see map marked \otimes). Mounds stop at edge of brush growth except where ^{narrow} peninsulas of brush invade the open grass valley in which case the mounds are near to shrubs.

grass

shrub

a transect from grassland to palm cactus is thus:

all areas are heavily grazed by sheep & goats. Horned larks in area of colony. No predators observed.

This colony of prairie dogs is the most compact and extensive I have ever observed of any species of *Cynomys*. It is such a unique area with such well defined limits that it could and should be made into a protected area. One-half a mile of vegetated area surrounding the grass valley would be sufficient to act as a buffer area for future encroachment of human habitation. A wider buffer area would make the area a complete biological unit for preservation of this animal. I will talk about this problem to Bernardo Villa in Mexico City. Left small area and at mileage 45915.6 counted 32 prairie dogs in area just before grass or open valley changes to a light fine-leaved shrub at which point the colony ends abruptly. These prairie dogs were confining and closely spaced in the 150-200 feet linear area of habitation. The grass is short and the animals are very conspicuous. ^{at 17.3 observed 2 crows & 3 roeys} Continued W to main highway 57 and thence to 5 at mileage 17.8. at 9:50 A.M. at 23.3 5 turkey vultures fed on dead animal 50 feet from main road. 23.7 entire valley in a mesquewood type vegetation and questionable whether prairie dogs here unless in lowest part of valley to the east. 24.1 turkey vulture. 24.5 extensive area at San Jose Raices that could be used by *Cynomys*. This area extends from center of valley to east to the opposite side of valley to the west, and thence to 5 on west side. 26.0 end of open valley but in cultivated but abandoned corn field. 27.8 Cultivated corn all along (to left) and prairie dog could inhabit. Corn fields are cut and stacked and now grown to weeds (sunflower). These weeds are also cut and placed in ploughs. 30.6 valley to extreme east and there 5 looks favorable for prairie dogs. Sparrow hawk. 31.7 flat ~~flat~~ part of valley and looks favorable for prairie dogs from one side of the valley to the other covering some 10-15 miles. There are a few mounds but probably not bonified prairie dog. 33.4 sparrow hawk. 33.8 5 side valley & beginning of brush. 34.5 turkey vulture. Area to W stops at El Refugio at 35.4, but favorable areas even 5 beyond. 36.2 sparrow hawk. 37.4 turkey vulture.

38.2 turkey vulture. 38.4 sparrow hawk. 39.7 sparrow hawk (3)
 41.8 turkey vulture. 42.5 valley to W could support prairie dogs but
 is not as favorable as the one previous or the one at Linares
 turnoff. 43.9 sparrow hawk. 46.1 turkey vulture (4), 50.6 crow.
 Palm cactus on stable areas are larger. 55.2 crow. Some
 junipers in area. 56.8 valley to W not so favorable for prairie
 dogs but by Utah standards could be used. 67.8 sparrow
 hawk. 73.0 areas now unfavorable for prairie dogs. 73.1
 sparrow hawk. 74.6 sparrow hawk. 75.7 sparrow hawk.
 77.4 sparrow hawk, 2 turkey vulture. 83.4 turkey vulture,
 83.7 turkey vulture, (2) matehula at ~~455995.6~~^{455995.6}. Boat-tail
 grackles and first ones seen since this morning. 46011.5 turkey
 vulture. 14.4 turkey vulture. 16.0 turkey vulture at San
 Chapparal turn off. 18.7 3 turkey vultures. 19.3 2 turkey
 vultures. 20.6 turkey vulture. 23.3 2 turkey vultures. 25.6
 Santa Rosa, turkey vulture. 28.1 turkey vulture. 45.0 Hui-
 Cacha. 49.3 caracara offered for sale by native. 50.0
 turkey vulture, ^{52.2 abrupt} first occurrence of a cactus  54.2
 ring-tailed animal road kill. 57.0 redtail hawk. 59.2 fork
 vulture. 63.4 turkey vulture (3) and a raven. Palm cactus
 bend to west. 65.8 charcoal blanks. 65.4 turkey vulture.
 66.8 3 raven, 1 turkey vulture, 68.1 raven. 69.4 turkey
 vulture. 70.6 Caracara? 71.3 turkey vulture. 73.8
 San Lorenzo. 74.5 turkey vulture. 81.6 Villa Nedalgo.
 85.6 area of severe erosion. 88.8 Ventura (mining operation)
 90.4 vulture. 93.3 African-like area of savannas & baobab
 trees. 94.7 divide overlooking broad valley to SW. 95.5
 raven. 97.5 raven. 46102.4 boat-tailed grackles &
 associated with habitation (never seen in other areas).
 46115 outskirts San Luis Potosi. Photo 720103-4 of car
 and trailer being repaired at Ford garage. Left about 6:00 P.M.
 8 flocks (average 50 per flock) passed overhead at garage.
 46146 camped for night.

Approx. 30 mi. S San Luis Potosi, Mexico

Jan 4, 1972

At camp photo 720104-1 of cacti wren nest. Left 9:25 A.M. 60.8
 area of desert but more irrigated agriculture and extensive
 rock fence-lines. 61.4 sparrow hawk. 62.7 raven. 63.1 2
 raven. 64.3 sparrow hawk. 66.2 raven. Farmers bring in
 dried shocks of corn by 4 wheel wagon, most commonly 2 wheeled,

frequently on human back. 67.9 sparrow hawk and raven.
 69.3 raven. 69.9 2 sparrow hawks (these birds are mostly singles).
 70.4 first large flock of crows (approx. 100). 71.0 raven. 72.7
 Las Caboma, raven. 75.5 sparrow hawk. 78.0 raven. 79.8
 raven. 80.2 2 crows. 82.6 crow. 83.4 20 crows. 84.8 2
 raven. Boat-tailed grackles in area. 94.2 Harris hawk.
 94.6 sparrow hawk. 94.7 sparrow hawk. 95.8 sparrow hawk.
 96.3 sparrow hawk. 96.9 sparrow hawk. 46200.2 sparrow hawk,
 crow. 01.7 farms are larger and better organized. 02.9 turkey
 vulture. 03.7 raven 05.0 turkey vulture. 05.2 2 crows
 3 raven. 16.3 ringtail, 2 raven. 18.7 sparrow hawk.(2).
 19.9 shrike. now between 2 major reservoirs, no water birds.
 23.3 turkey vulture. Paripara? 46235.6. 11:45. 28.3 redtail.
 in area of highly metamorphic rocks with reds dominating.
 48.9 crow (2). 51.0 4 crows, first tractor in field, other
 cultivation by open. 53.5 5 raven, grackles associated
 with habitation. 62.4 turkey vulture. 75.1 Pacha 4 turkey
 vultures and 2 raven. At 82.2 on reservoir to right counted
 340 ruddy ducks, 60 pintails, 20 greater scaup, 10 redheads,
 1 small grebe with white line on sides, no gulls, 50 coot.
 Turkey vulture overhead. Several other large reservoirs beyond
 have some ducks on them. Inhabitants washing clothes along
 way. More deciduous trees on landscape. all reservoir
 mercury. 99.2 mt tops covered with deciduous trees and surface
 of slopes with large rounded rocks. 46312.6 turkey vulture.
 13.3 2 turkey vultures. 14.0 turkey vulture (2). 15.3 turkey
 vulture. 17.8 deep cut road beds, 2 turkey vultures. 23.1
 good geological road cuts, mainly sedimentary layers of
 loosely consolidated material. 27.8 turkey vulture. 33.2
 Joybas, reservoir of about 1000 decks. 46351. Lago de
 Guadalupe trailer camp. at camp noted a myrtlelike
 warbler, flock 38 Bohemian waxwings and a goldfinch?
 at 4:00 P.M. Spent evening in Mexico City. This city is so
 arranged that a stranger finds it almost impossible to get
 around, especially as landmarks are obscured at night. Unless
 one knows the town he is carried by the traffic with choice
 of direction. Some intersections have as many as 10 entrances,
 each one crowded to capacity with cars. To change lanes
 in these intersections requires knowledge, agility and courage.
 To make changes of lanes one must force himself into traffic
 with inches the car into traffic with waving hand. The traffic
 is simply insane and the drivers use the street as a traffic game.

Lago de Guatalupe, Mexico

Jan 5, 1972

Spent the day in Mexico City, visiting the national museum of Archeology, the Natural History museum and the entire length of the main street the Paseo de Reforma. Driving in the day is only slightly better than in the evening, but today the guiding landmarks were still obscured, this time by smog. The archeological museum is perhaps the best in the world, both in size, materials and arrangement. It shows how the combined strength of a nation can produce superior museums, in comparison to many local provincial ones. For this kind of material I believe the concentration of these treasures should be in one place. Photo 720105-1 is a boat made of wood and used by early inhabitants. ^{720105-1 a cart in museum.} Photo 720105-2 is a sunette on open patio of museum with bamboo outline. Photo 720105-3 a maya building with large trees in foreground. Photo 720105-4 a silhouette at night of a tree against a large globe of the world which houses continuous television. In the archeology museum two techniques are commonly used; one the suspension of panels by chains or cord from the ceiling and the other an inverted fish tanklike box of polish plate glass on stands for exhibits.

The activity in the city was much as any other modern city - varied and over-crowded. The traffic was fast as it - heavy, close to you, total disregard for the rights of others! The drivers used their horns instead of their brakes to work thru traffic. Taxis were everywhere, of every vintage, & the one thing in common was that they all were clean and shiny, no matter how old!

Lago de Guadalupe, NW Mexico City, Mexico

Jan 6, 1972.

Left this morning for east coast at mileage 46455, at 10:25 A.M. Crossed Mexico City with trailer which for city part is not recommended. Continued N on highway leading to Pachuca. Considerable evidence of lake bottom physiography and in most recent form is without habitation but a grassy plain. 12 turkey vultures between these two points. At 46544 at Sahagun took photo 720106-1 of general topography of country. Area terraced and grown to agave cacti. 53.0 first large tree forests. 53.3 Ascerts. 73.5 turn off to Honey. In this area is the best developed farming, and organization of the entire village complete. 75.6 La Presa on top of a divide. Pond on right but no water fowl. Continued on to a point where there is a large lake impounded by a long dam and surrounded by a pine forest. This is between Honey and entrance of Highway 119 from Zacaatlán. at 46584 mileage. Photo 720106-2 of two tree just outside of trailer near dam. The large forests are associated with fog and rain. The pines have leaves from 6-8 inches and leaves occur in 3's. No fish surfacing in lake but nets are in evidence. The ground is covered with green & yellow mosses. This area is not tropical.

Between Honey and Huachinango, Mexico

Jan 7, 1972

Temp last night 48° F. fog and light rain throughout. This morning between 7 and 7:30 A.M. there were 15 buses past along road. One group of 4 natives (women without shoes) got off a bus and could not find all their luggage in compartment under bus so without checking further the bus driver pulled away and left the natives in confusion for 5 minutes after they bus had departed. Camp at approx 6800 ft elevation. Left at 9:00 A.M. Beyond state line noted that grass grew luxuriantly on steep banks of road cut where grazing animals could not reach. Elsewhere the grass is eaten to the roots. 88.8 This area reminds one of the second growth of the United States. Huachinango supports a syndicate of huts with a similar artistic arrangement of apples (green & red), oranges and bottled honey. 89.0 first broken-type ferns. Vegetation becomes even more like the N.W. with dense growth of plants & vines. 94.8 Huachinango. 95.5 City park developed with tile on

walls, benches and the streets are clean of debris. 98.4 Rio de Tepacapa. 46600.2 at Nueva Necapa. Photo 720107-1 and ^{and 720107-3a} 720107-2 of this lake, Annette in foreground of latter. 720107.3, lower down on lake. no water birds on lake but many fish jumping. Boat-tailed grackles in area as well as many other kinds of smaller ones. 03.1 photo 720107-4 and 720107.5 of fog moving up canyon. 04.7 more and more tropical vegetation. all slopes in good green short grass where sidehills have been cleared. 07.1 at Xicotepetec. 16.9 good tropical forests with telephone line joined with spider webs. 17.6 more banana trees at 2300 ft. 22.4 fog clouds rising or higher at 1300 ft. First black vulture. 23.2 15 black vulture feeding on animal at side of road. 23.5 at Camacho. 24.1 ^{edge of} at river, approx ⁵⁰ black vultures at side of road. River like Kansas in late fall and clear with rounded boulders for channel. 33.0 Cazones. Large trees indicate original condition of forests in this area. Arrived here at 12:00 A.M. 26.4 following along edge of river. 29.2 on flat part of valley surrounded by ~~tree~~ mountains. Papaya groves and supporting large green fruits and egrets (snowy - black bill & yellow feet) make abrupt entrance into landscape. Boat-tailed grackles and swallows most common birds. also good banana groves. Hawk with shape of marsh hawk but broader. 31.7 20 black vultures. 34.4 8 black vultures. 34.9 40 snowy egrets in compact group along side of pond. 35.6 still along river. Boat-tail grackles increasing in number. 38.1 San Diego. more Spanish moss. 39.8 20 snowy egrets. 42.5 14 egrets. 43.6 jacana ~~chicama~~ on vegetation of pond. 44.3 20 egrets following cattle. 45.8 green heron. 46.4 15 egrets. 47.9 first sparrow hawk since Mexico City. 65.0 back to river again. First bananas for sale and bought 10 for 1 pesos. 51.5 good banana stored as specialty. 52.4 along side of river. This river would make good canoeing. 55.9 8 egrets, 2 of them on top of small tree. 56.8 Costa Rica turnoff. 1:00 P.M. 66.2 Nuevo Progresso. 65.8 30 egrets. 69.6 Tihuatlan. 72.3 La Roma. 74.2 6 egrets. 75.3 60 egrets. 79.0 2 Turkey vulture. 80.1 13 egrets. 84.6 20 black vultures on side of road. 88.4 black vulture. 89.9 Tuppen bridge over bay. First gulls since Lawrence. 92.7 20 black vultures. Good groves of coconuts. at 93.9. Another marshlike hawklike bird that soars in air. Arrive Playa at mileage ^{46697.0} at 3:00 P.M.

Slight rain practically all day. Natives tell us that this is the storm that is producing low temperatures and snows in the plateaus to the north. The road we covered to date is magnificent for seeing people and tropical forests. It should be traversed as we did today from west to east. The road is ^{windy} but passable grades. Road rough thru villages. Photo 720107-6 and 720107-7 of fishermen setting gill nets.

Playa South of Teppan, Mexico

Jan 8, 1972

leisure camp.

Birds in area are: black-billed plover, greater yellow legged sandpiper, snowy plover, spotted sandpiper, willet, herring gull, smaller gull with banded tail in young, royal tern, ~~gull-billed tern~~, and another tern with ~~red~~ black bill and red legs and darker back = ~~roseate~~ ^{roseate} tern. Porpoises, 12 feeding at mouth of bay. Temp last night. 62°F. Also sandwich tern, roseate tern, black vulture, snowy egret, boat-tailed grackle, killdeer. Temp at 1:30 78°F. At camp took the following photographs:

- 720108-1 fisherman examining haul from fish nets left all night
- 720108-2 dogs at trailer
- 720108-3 surf with annette in foreground. She claims the water to be between 65 and 70 and near body temperature.
- 720108-4 ibid
- 720108-5 ibid
- 720108-6 ocean with foreground of ~~food~~, native hut (cargo ship in background) from previous high waves. Framed with pine
- 720108-7 general shot of ocean
- 720108-8 trail, car and our camp. This camp is ideal for easy access and, accessibility and is or could be private. Teppan has the potential of developing into a very nice community. It is not commercialized or does it have excessive large industry. It is also near the rain forests of the mountains.

Left at 1:30 P.M. at 46704.0 mileage. The sky cleared this morning for first time in a week of cold cloudy weather. 719.2 photo no 720108-12 of anteater road kill. 2 black vultures. The black vulture and turkey vultures are difficult to identify at an extreme distance but nearer the black can be differentiated by wing beat which is batlike, short tail and white spots in wings. They are more frequently found in groups while the turkey vulture is general seen as pairs. Black vulture will remain on side of road with cars passing at 10 feet.

Tempache at 22.7 26.0 *virginia opossum* rd. kill.
30.9 road divides. 35.3 black vulture. 37.1 4 black vultures.
37.5 8 black vultures. Vultures are frequently associated with
cities or habitation. 37.7 Cerrito Azul. 41.4 turkey vulture.
43.0 2 black vultures. 44.1 8 black vultures. 44.8.3
gray hawk? (*Buteo nitidus*). 50.8 turkey vulture. These vultures
are seen generally within 110 mi of road. I would predict the
census would be immeasurable greater if the more distant
area were included. Driving in Mexico does not permit leisure
or casual observation. 52.6 photo 72010 8-13 of one of 2
group of black vultures within city limits. The count from
the photograph is ____ x equal number in second group is
_____. 55.6 2 black vultures 60.0 2 black vultures.
Sparrow hawk and first one for long time. 73.8 32 black
vultures in one group in fair. 74.7 natural clear water
pond with 2 teal (bluewing) and 2 jacanas. 76.2 boat-tailed
grackles common in village and usually occurring as pairs.
76.4 5 black vulture at side of road, one in road. 78.7 turkey
vulture. 78.7 turkey vulture. Ozul sand at 79.1 81.1 first
green growing corn. 82.9 2 turkey vultures. 82.1 sparrow
hawk. 86.2 2 turkey vultures. 89.0 country showing some
signs of becoming slightly more arid. 92.2 gray hawk?.
92.5 caracara feeding on road kill. 92.6 8 black vultures.
large inland bays to the east of us. 94.9 7 black vultures.
46803.0 2 turkey vultures. 10.0 2 flocks of blackbird
size birds and first since Mexico City. 13.3 black vulture.
15.7 hawk slightly larger than redwing and pure white belly.
468 19.6 Tampico ferry (10 pesos). From Tampico to E to Mediero
and to north Playa where we camped. Arrived at 6:00 P.M.
at mileage 46827. The road to here is not worth the
the trip to the beach. Factory pollution, if wind were in a
certain direction, would make the beach unbearable. Only birds
on beach were 4 sandpipers.

Playa del Norte, Madiero, Mexico

Jan 9, 1972

Last night almost unbearable because of industrial pollution.
min temp. 62°F. No birds on beach except gulls. On upper
beach was one sparrow hawk and several boat-tailed grackles.
Because of the pollution and concentration of people (although
few here today) would not recommend for camping or bird

watching. Continued w thru Mediera and thence N. 44.0 Actinera, considerable marsh land. One turkey vulture. 47.8 flock of blackbirds. Cattle egrets all thru the country so wherever favorable conditions exist. Egrets prior to these observations are probably cattle egrets. Will not count these birds. 56.4 Miradores. 60.7 Country like Kansas. 63.4 mainly agriculture and egret in groups of 10-200. First evidence of spraying field by plane. Area with canals. ^{30.7} more and more sugar cane. 31.5 El Limon at 12:25 Met

Mrs Martinez who runs a chicken ranch & harvests cane sugar. Trailer court her backyard. Husband a partly Chinese. Some of her statements are:

Has two pet coati minde, one of which lives free in trees in yard and comes at command, another in cage that had been raised since a young one. Eats fruit and meat. Is confiding, shakes hand and nuzzles one's face.

Rabbit (domestic) eats meat and feeds with cats & coate.

Has 50 cats. They reach a composition of older animals and then the population decreases.

Chickens cannot stand too much disturbance and, characteristic of large groups which are confined.

Not hot in area for 3 years.

Papaya, monos, Euphorbia, bananas, banyan, and other trees on her property.

At one time the area between here and Monterrey were was continuous with palm trees now all removed for agriculture.

Friend in mountains to W, has refuge in rain forest and charges \$25.00 per day for conducted tours.

Contraband is common practice.

Left and at Rio Frio at 34.4 41.6 have seen 3 king-fisher since first one observed. Area sugar cane & canals.

Shopped in market and left at 6:30 P.M. There are at least 150 market type stores in a restricted area that sell Mexican articles of all descriptions from all states of Mexico. There is considerable repetition of material. Prices are approx 40% higher than actual final bargaining price. This is one of the best ways to see the items mfg in Mexico although they say that some articles from Japan are sold here. Left at 6:30 P.M. at 47201 and crossed into the U.S. No problem with U.S. Customs and 50¢ Texas tax on qt of Tequila. Camp in Brownsville in Chamber of Commerce parking lot. Many cars stopped here to adjust purchases made in Matamoras. Would recommend a special trip to Brownsville to shop in Matamoras, Mexico. No problems with customs. Day visit require ^{no pass.}

Brownsville, Texas

Jan 11, 1972

Left 47203 at 8:00 A.M. 222.1 2 long-billed curlew on way to Boca Chica near mouth of Rio Grande. They inhabit short grasses bordering marsh areas. They called twice. A local informant said these birds raise young in the area but I believe they nest much farther to the N. The dominant bird is meadowlark of 2 species (by call) and since Brownsville have observed approx. 30. 26.2 at end of road and now on beach. Except for 3 cars (fishermen) the beach is untouched or inhabited and to this extent is a good place to camp. The surrounding land is low and would be hazardous in case of storm. Bird life may be better represented to S toward river but in any case the area is limited in extent and variation of habitat. It is surprising that Boca Chica is not used by inhabitants of Brownsville. Had breakfast here and returned to Brownsville and thence to Port Isabel. At 3:28.2 observed 2 long-billed Curlew along side of road.

Shorebirds along road are willet, laughing gull, Herring gull dowitcher and some boat-tailed grackles. At 43.0 sparrow hawk. 47267.9 Port Isabel. Willets (6) and laughing gulls and ringbills on beach. 78.0 end of present road to north. One can go farther on beach. This entire offshore bar is developed with private homes and accommodation. The trailer park at W end is attractive and a good base for ~~operation~~ operation. Chances for camping on beach are out except to far N. The variation of ocean, inland lakes and marsh area make the area attractive (average value). Great Blue Heron, laughing gulls, pintail ducks and Caspian tern are dominant birds. Left area and turned off highway 510 at Laguna Vista to N. will work way up to Laguna Atascosa, thence W & N to highway 77.

95.4 turkey vulture. 47.302.1 sparrow hawk and turnoff to Headquarters of reservation. Laguna Atascosa. Bird life thru reservation extremely rare. Self conducted car routes are not recommended as a refuge policy. 47.303.3 shrike. 2 marsh hawks. 04.4 so far have seen 3 shrikes and 1 mockingbird. 05.3 Harris hawk. Lesser scaup & coot in one bay. 100 snow geese in cultivated field and 10 blue and 15 Canadian geese. 5 canvas backs, 3 turkey vultures, red-tail, marsh hawk 12.4 sparrow hawk. 16.5 W side of reservation. Have give kinds of birds only of inhabitants of refuge which is not too impressive for an area of land set aside for winter migrants. Areas in S Louisiana support ^{many} hundred times more wildlife than Atascosa. I believe there is too much management of this refuge. 27.0 Rio Hondo.

40.4 in this cultivated area the hawks and especially the vultures are absent. 41.4 sparrow hawk. 44.8 2 marsh hawks. 50.0 main highway (77), at 3:00 P.M. 62.1 sparrow hawk. 62.3 sparrow hawk, 2 turkey vultures. redtail. Pond to left 2 redtails and 1000 egrets, striped skunk road kill. 64.0 Harris hawk. There is a decided increase in numbers of birds including mourning doves, egrets, boat-tail grackles and blackbirds. 64.4 4 turkey vultures. Harris hawk. There has been a change from extensive cultivated lands to second growth grazing lands and an associated increase in birds. 65.3 Harris hawk. 66.4 2 turkey vultures, ponds with 20-200 decoys and shorebirds. Harry woodpecker, Harris hawk. 66.9 Harris hawk, 67.9 Harris hawks (2), road kill turkey vulture, one live vulture

overhead. 68.4 sparrow hawk, grackles (2 species) very common thru here. 68.9 Harris hawk, 69.8 sparrow hawk. 70.9 Harris hawk. 71.9 2 Harris hawks, 72.2 Harris hawk. 72.4 Harris hawk, turkey vulture 72.8 redtail, Harris hawk. 73.6 Harris hawk, 74.3 Harris hawk. 74.6 Harris hawk and turkey vulture. 75.8 sparrow hawk, Harris hawk. 76.3 turkey vulture. 76.5 Harris hawk. 76.8 Harris hawk. 77.2 redtail and 2 Harris hawks, turkey vulture. 77.5 Harris hawk. 78.3 redtail. 78.4 Harris hawk. 78.5 Harris hawk. 78.7 redtail hawk. 79.0 sparrow hawk, Harris hawk. 79.1 redtail. 80.1 3 turkey vultures, Harris hawk. 81.0 It is curious that there are not more herons in this area as there are many ponds which have good populations of ducks and shorebirds. 82.4 Harris hawk, turkey vulture, redtail, some red-wing blackbirds. 83.1 Harris hawk. Only us of area is grazing. Large flocks of blackbirds in area. 84.4 redtail, 84.6 redtail. 84^{5.0} Armstrong. Large flocks of blackbirds. 85.5 Harris hawk. turkey vulture. 85.8 Harris hawk. 86.0 redtail. 86.4 redtail. 86.6 Harris hawk. 87.3 marsh hawk. 88.6 redtail (some of these are tending towards dark phase). 89.3 redtail (with roughleg characteristics). 89.8 Harris hawk. 91.3 larger trees but may be local at least patches of larger tree increasing. gophers common and increasing in number. The trees and gophers are correlated with irregular soils ^{of sandy type}, ~~sands~~ terrain. 93.8 redtail like roughleg. 94.3 redtail. 99.8 redtail. The increase of irregular terrain & trees is associated with decrease in hawks. 47~~4~~ 402.8 sparrow hawk. 02.8 sparrow hawk. 03.0 redtail. 04.0 Harris hawk. 04.9 snowy & cattle egrets, Harris hawk. 05.1 Sarita 4:30 number of ducks high all along route. Now to N the land is flat and the irregular terrain & trees are absent. 07.1 Harris hawk. 089 sparrow hawk. 09.1 Harris hawk. 10.4 Riviera. 13.0 sparrow hawk. 13.2 Harris hawk. 15.3 Harris hawk. 15.5 redtail. 16.1 sparrow hawk. 16.8 Harris hawk. 17.3 Harris hawk. 17.4 sparrow hawk. 18.5 sparrow hawk. 19.0 Ricardo. 20.3 redtail. 20.7 now on 4 lane highway. 20.9 Business turnoff to Kingsville to left. Continued ~~to~~ along main highway and did not go to Kingsville. 25.4 sparrow hawk. ~~at outskirts of~~ 27.9 marsh hawk. 28.3 marsh hawk. 28.6 redtail. 29.0 redtail. No much human habitation thru this area but completely cultivated. 29.5 Harris hawk

29.6 redtail. Coyote road kill. 31.4 Bishop. at 5:10 P.M.
 32.5 turning E on highway 70. ^{39.8 plowed now} entire area from Bishop
 on is completely cultivated and flat as a table. 40.1 sparrow
 hawk. 50.8 still passing thru plowed and harrowed lands.
 Birds rare. 51.5 sparrow hawk. 52.4 Chapman's Ranch.
 turned to 286 highway. 56.1 second large swarm of black-
 birds moving to S. 58.2 + large crane-like birds, sparrow
 hawk. 58.7 more houses along side of road but land still
 completely cultivated. 47460.3 sundown 5:55 P.M and
 end of Census. 47.6 City limits of Corpus Christi and now
 on highway 357. at 6:00 P.M. 68.8 junction of 368.
 76.2 Intercoastal Canal overpass. 80.5 on beach at 6:30
 P.M (Padre Island Camp just east of the State Park (Nueces State
 Park)). Trailer about 70' from ocean. By light on beach
 noted the great blue heron ^{at least for an hour} and black skimmers to feed all
 night. Sanderling active, after dark.

Padre Island, S Corpus Christi, Nueces Co., Texas

Jan 12 1972

Birds along beach were great blue heron, sanderling, Herring
 gull, laughing gull, ring-billed gull, Royal and Caspian tern
 (mainly Caspian), Common tern, willet, eared grebe among
 breakers, horned lark on beach. Left 47480 mileage at
 10:30 A.M. Followed paved road to Aransas Port although
 one could follow beach if so desired. (Salt too damaging for
 car & trailer). The road passes very near beach and one can
 see beach at many points. Some marshland to N but
 looks barren & dry.

865 marsh hawk

gathers completely inhabiting sand dunes all along route.
 87.4 marsh hawk 90.1 redtail. vegetation mainly a
 short form and brown in color, green in wet places. Few
 meadowlarks. Pond with or without ducks. Temp. 64°F.
 Some ponds with rushes but not many. Some dunes active and
 colorful. 47502 at ferry at Port Aransas. 60 double-crested
 cormorants flew down bay. ^{not impressed with this area (Aransas Pass)} 07.9 Aransas Pass. Long-billed
 Curlew. ^{20.9} 2 sparrow hawks. ^{23.4} Rockport. In this area
 are oaks with large trunks and overhead protection. 31.9 east of
 viaduct. 3 turkey vultures. Here at Sea Gull Sports Inn arranged
 for boat trip to see whooping cranes in Aransas Wildlife Refuge.
 Left 1:30 P.M on a 65 foot boat the "Whooping Crane". Navigated
 out intercoastal passage and thence E along waterway and tidal
 flats along S side of refuge. Observed the following birds:

Laughing gull: The gull that followed the boat. It is possible to get these gulls to within 3 feet or less of camera in stabilized flight. Mainly adults.

Serring gull. 2 or 3 following boat.

Ring-billed gull. mainly on beaches and resting on islands
double crested Cormorant In flight and resting off on sand bars and small islands. approx. 300 total. Frequently with white pelicans.

Great blue heron. Common on tidal flats and around ponds and a crude estimate would be 50.

Golden-eye duck In deeper parts of bay and in unexpected numbers. approx 70 all told.

Eared grebe. approx 20 and singles or small groups.

White Pelican. 120 in several groups mainly resting.

Oyster Catcher. 2 pairs

black skimmer. group 8 and 2 pairs

Royal tern 2

Caspian tern 18

Foister tern 12

Gadwall duck 8

Shoveller 4

Pintail 40

Lesser yellowlegs 2

greater yellowlegs 1

American Egret 30

Snowy Egret 45

Redtail 1

Turkey vultures 42 in feed at one time over refuge. mainly singles or small groups. Some could be black vultures or Caracara.

reddish egret 3

ovacet 120 one flock

Caracara 4

Coat 18

Curlew 2

willet 6

red-backed sandpiper 12

marsh hawk 6

sanderling 30

yellow clawed night heron 2

little blue heron 1

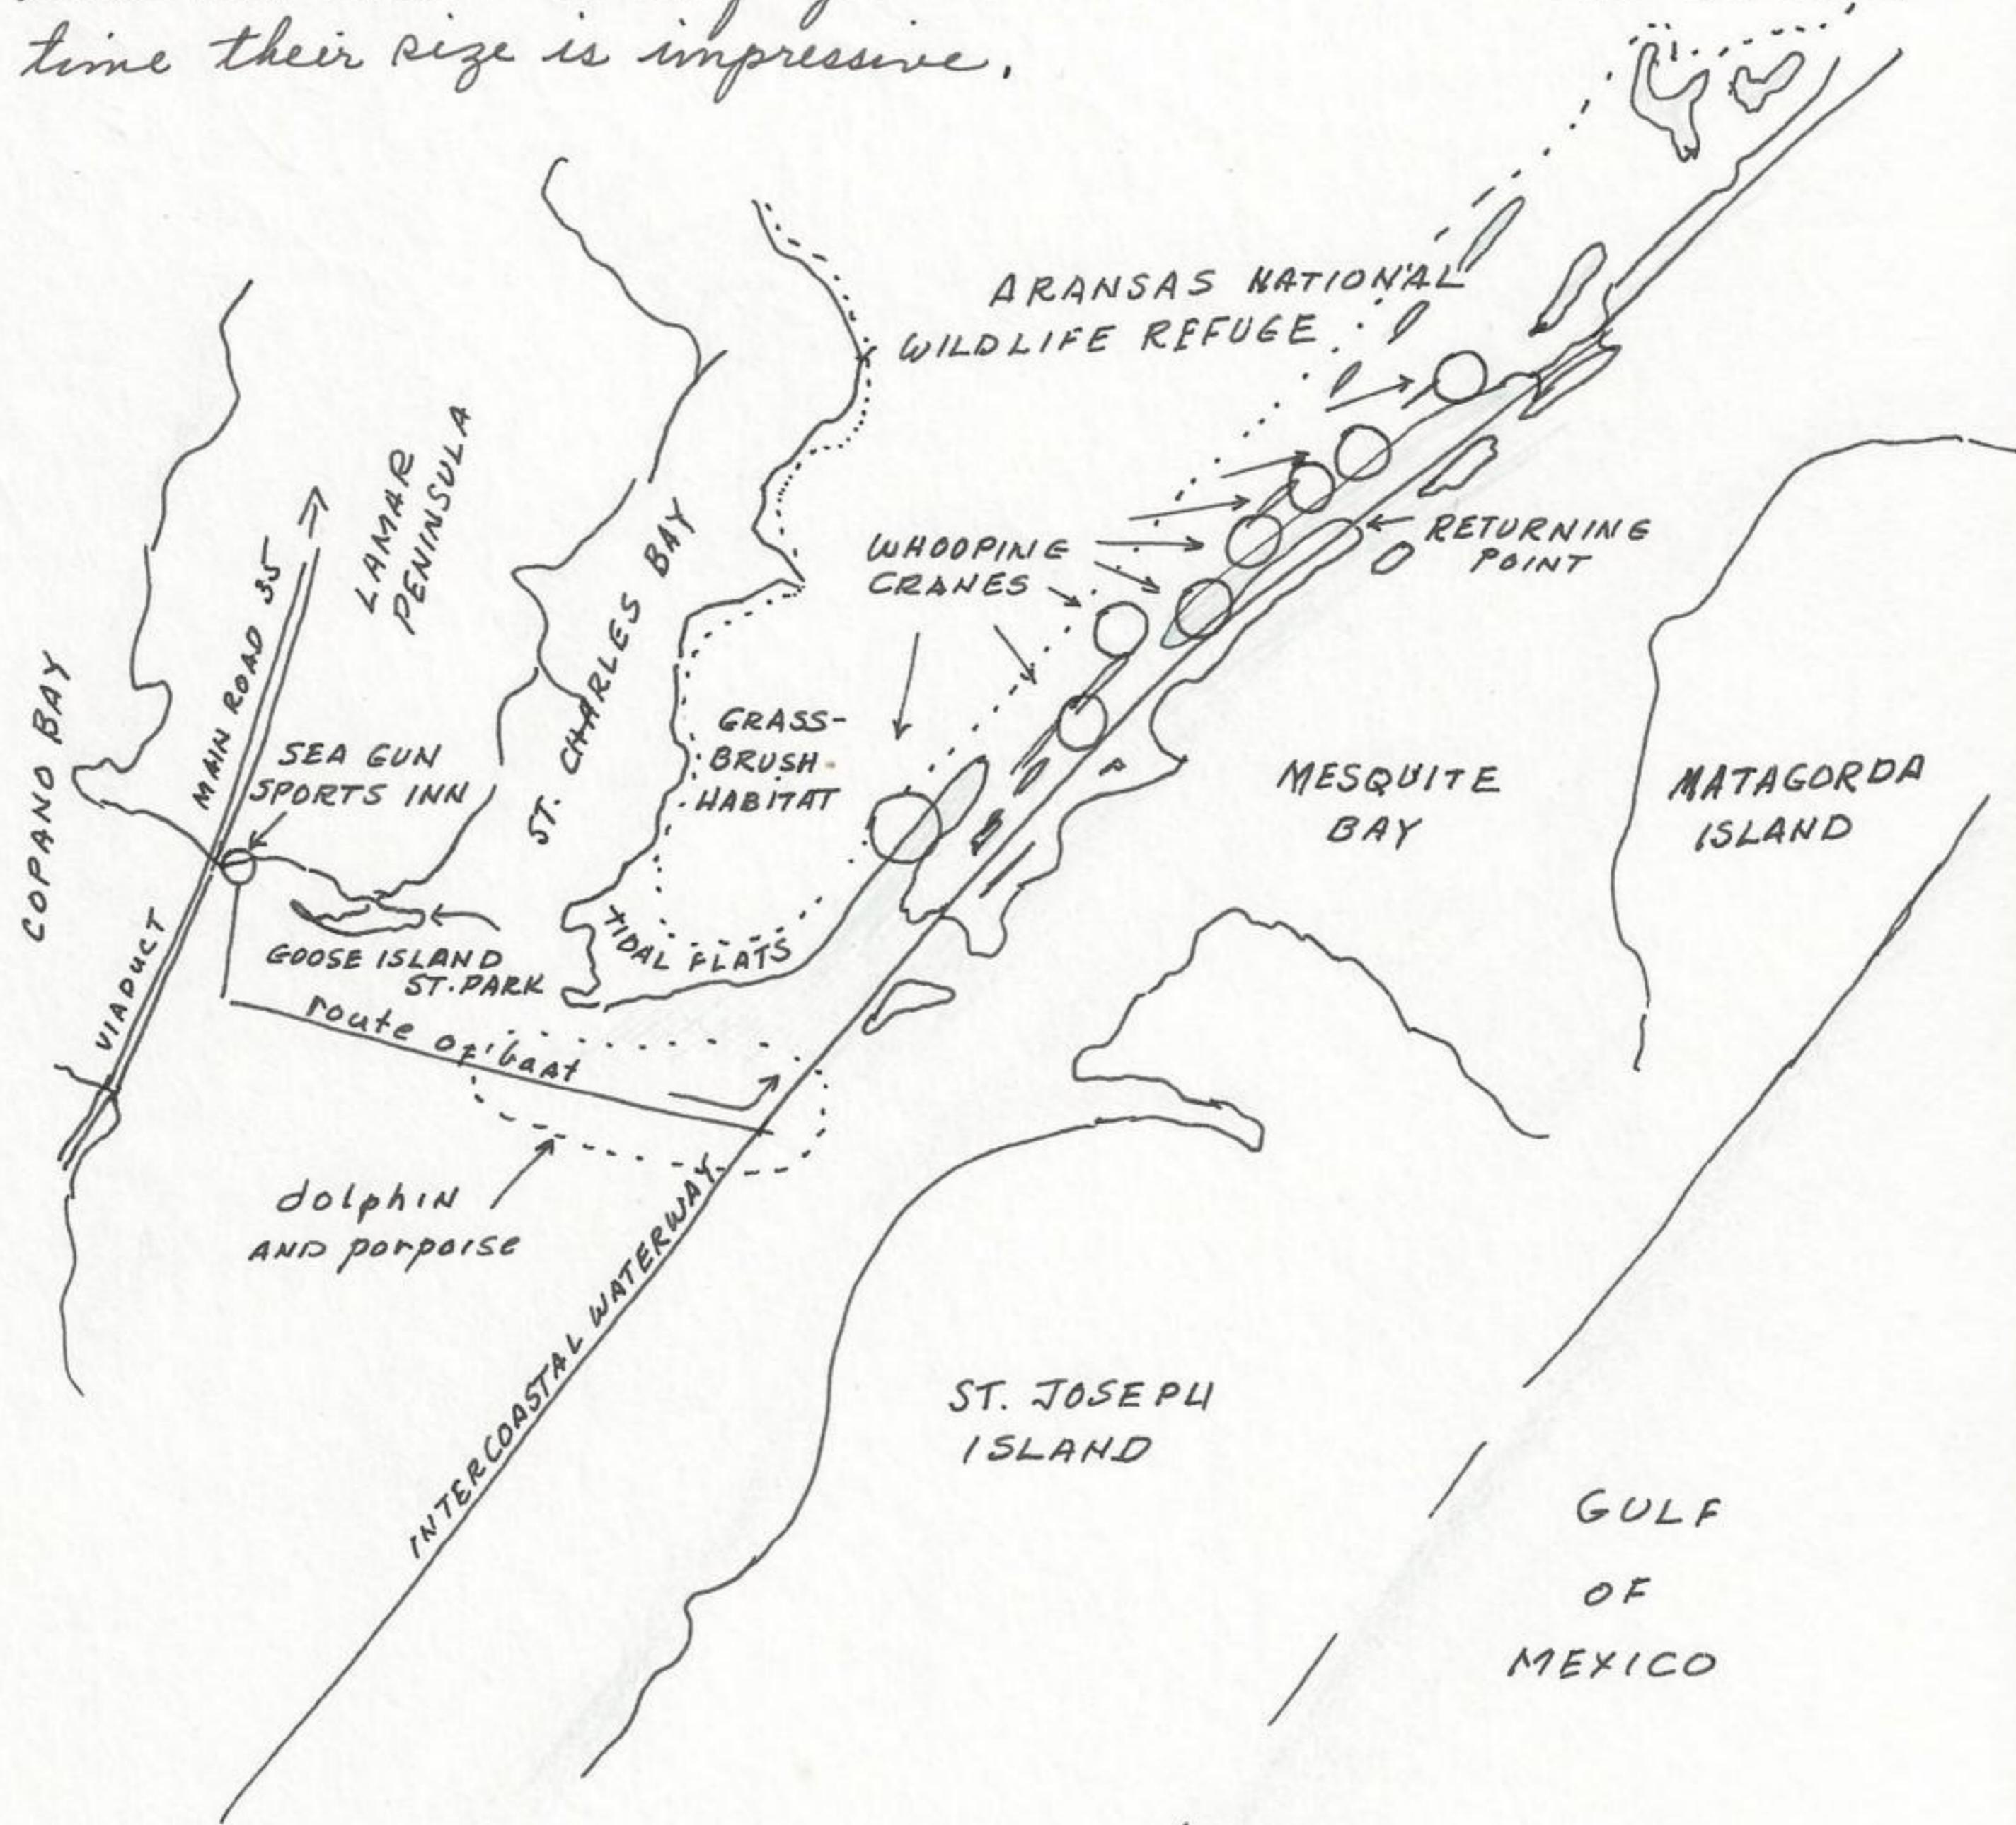

Total numbers are not reliable, especially with ducks and other kinds of birds and are to be used as coarse approximations.

Killdeer 2
red merganser 6
porpoise 4
dolphin 5

720112-23

The whooping cranes are territorial and in gross field bordering the tidal flats occurred in the following groups and sequence:

2-3 (2 adults and 1 immature) - 3-2-2-2-2-3 = 19 birds. This number is 19 of 59 ~~adults~~ existing birds. 23 other whooping cranes are in captivity from birds raised from eggs. The second group of 3 flew approx 2/10 mile; others fed and walked about on their feeding grounds. They have a different stance than the am. egret and appear more hunched back. Their flight is unmistakable and at that time their size is impressive.

ROUTE OF BOAT AND
TERRITORIES OF
WHOOPING CRANES,
ARANSAS NATIONAL
WILDLIFE REFUGE.

Left Sea Gun Inn at 5:30 P.M. and continued E. at mileage 47536.6 36.8 sparrow hawk. 39.9 sparrow hawk. 42.6 marsh hawk. 44.4 sundown and lights fading. ~~End of census.~~ 46.4 redtail hawk. end of census. Point Comfort 47577. at La Vaca

Point La Vaca Camp, Texas

Jan 13, 1972

, La Vaca Bay,

Left at mileage 47577. at this camp, at side of water observed. 6 long-billed curlew, pipit, double crested cormorant, ring-billed gull, Herring gull, laughing gull, Louisiana Heron, boat-tailed grackle, black-bellied plover, snowy egret, Caspian tern, common egret, Forster tern, sandpiper, gadwall, pintail, snowy geese (75). Left at 7:30. 82.8 sparrow hawk. 84.9 coyote road kill. 85.8 2 snow geese, large flocks of lourbirds. 88.3 heavy congregation of cowbirds along road. 89.0 marsh hawk. 89.8 sparrow hawk. 90.0 Carancahua Bay, 95.3 sparrow hawk, 2 snow geese, killdeer. 97.5 redtail. 98.7 sparrow hawk. 02.6 sparrow hawk. 23.5 striped skunk road kill. 08.4 sparrow hawk. 47608. 10.5 2 striped skunk road kills. Have not recorded all road kills. But Road hills are, however, uncommon. 16.8 2 turkey vulture road hills near an opossum road hill. 19.8 80 snow geese. 21.6 marsh hawk. 22.3 more cottontail road hills than I have observed on entire trip. The increase of Virginia opossum and striped road hills as associated with the rabbits. 23.2 marsh hawk and turkey vulture. 24.1 marsh hawk. 25.1 250 snow and blue geese. 26.8 marsh hawk, killdeer frequently at side of road. 27.8 beginning of oaks. 30.4 Colorado River. 32.6 Bay City. 36.4 marsh hawk, sparrow hawk. 41.1 sparrow hawk. Oaks increasing and more savannas. Few crows but not many. 43.3 2 turkey vultures. 44.2 turkey vulture, few snowy egrets. Large trees and water lilies similar to Louisiana. 48.8 2 turkey vultures. 51.2 country still flat but large ^{solid, tall} forests. 52.2 San Bernard River. 53.9 sparrow hawk. 57.9 3 turkey vultures. 59.3 raccoon road kill. There are many more road kills in this area than in Mexico. Daphne mounds are conical. 64.9 Brazos River. 67.0 increase of Spanish moss.

72.4 Jackson Lake. 84.4 Intercostal waterway.
 85.3 Surfside. and road along beach. sandpiper,
 ringbilled gull, 5 willets in one group. This area has
 a pollution problem. 86.1 left beach at fisherman wharf.
 86.2 sparrow hawk (2). This area is summer homes on
 stilts. 91.1 sparrow hawk. 93.4 sparrow hawk.
 94.4 marsh hawk. not much wildlife. 96.7 sparrow
 hawk. Striped skunk rd, 98.5 Tall bridge, extensive surf
 (1 mile) coming in from gulf. Area with good
 water resources for birds. Many cattle egrets and
 white pelicans. 07.2 marsh hawk. 08.0 sparrow
 hawk. 08.1 sparrow hawk. 09.3 sparrow hawk.
 10.5 2 sparrow hawks. (71°F). 12.0 only 12 miles
 from Galveston. 12.7 marsh hawk. 47.723. at
 Galveston, 12:30 P.m. 27.3 E end of Galveston and
 although not many building is not a good place for
 birds. Pelican Island may be better. Left at 3:00 from
 Galveston. 500 gulls in several groups and is the
 dominant bird. 55.2 2 sparrow hawks. 62.0
 Nassau. Saw new space lab. L 62.0 at 5:15 left Nassau.
 Continued N thru Dallas. At late twilight, this city
 is extremely attractive with the brilliant lights of the
 City and parade of car lights on the super highways.
 continued N to Huntsville State Park where we camped.

Huntsville State Park, Texas

Jan 14, 1972

Temp last night 36°F. This area in the pines has been
 developed more than when visited 3 years ago with more
 camp sites. Surveyed the same area as of previous
 trip and in 1/2 hour observed the following birds.
 3 song sparrow, Carolina chickadees, crow 8, Carolina
 wren 3 and singing, robin 12, hairy 1, downy 2,
 turkey vultures 58 in trees at edge of lake with backs turned
 to morning sun, some with wings outspread, redtail 1,
 eastern bluebird 18, juncos 6, pied-billed grebe 5, kingfisher
 2, coot 3, mallard 2, red shouldered hawk? 1, swamp
 sparrow 2, cardinal 3, titmouse 3, redbellied woodpecker 2,
 creeper 1, pileated woodpecker 3, ruby-crowned kinglet
 myrtle warbler 2, fox sparrow 1, cooper hawk, yellow-bellied
 sapsucker, pine siskin 8, goldfinch 6, white-breasted

nuthatch, white crowned sparrow, flicker, pine warbler
deer tracks, some not over an inch and a half.

Left at 4785.4.0 at 9:45 A.M. Raven and crow
along main highway but not in winter populations numbers.
66.9 2 turkey vultures. 68.4 4 turkey vultures. 71.5 black
vulture. 72.0 turkey vulture, black vulture. 72.9
black vulture. Crows average 4 per mile thru forested area.

Slough Creek, Perry Lake, Jefferson Co., Kansas.

March 13, 1972

Census of mammals and birds on west side of Slough Creek from Ferguson bridge to bridge 902 SE of Bay Scout Camp. Left Lawrence at 11:30 A.M. at mileage 92.9 (Perry Junction). Temp 48°, sky 1/10 m high clouds, windy. Will keep track of kinds of birds between Lawrence and Perry. Sparrow hawk, rough-leg hawk, Eng sparrow, 02.9 Perry Junction, ^{individual} The 3 birds previously recorded were, in fact, the only birds observed from Lawrence to Perry. From Perry junction to SE corner of Perry Lake area recorded: redtail, Eng sparrow, 7 tree sparrows, 4 juncos, meadowlark, marsh hawk, 05.4 SE corner at 11:50. Will keep complete list of numbers of birds from here on. 05.6 redtail, 05.7 redtail, Slough Creek at 07.7 N end bridge, at 11:55. and beginning of walking census along west edge of Slough Creek arm of lake. Wind from W and strong enough to make good white caps on lake. now following along outcrop of rocks among deciduous forest. The rocks are rounded on edges as they are being eroded. 12:02 fence line, 2 blue jays. 12:05 from point watch bald eagle (adult) hunting over bay to E (200' above water) It dropped down twice to water for fish. On the third trial it captured a small fish and then flew E across bay to alight in top of dead tree to consume the fish. 4 goldeneyes in same area as used by eagle. They left on my approach. Can see 5 other ducks (sp?) and 1 herring gull in middle of bay to S. 18 mallards left area in groups of 5-3-4-2-3-1. Another herring gull. Approx 300-400 starlings concerned with eagle. 12:15 kingfisher flew down along shoreline and then left water to fly over trees as shortcut to lake to W. Lee side of ridge comfortable but high wing in bay. Noted that styrofoam cups + ice chests are the greatest offenders of pollution along shoreline (5 articles in 100 feet). Plastic second in degree of pollution. Fishermans lures and bobbers approx 1 per 50'. Plastic tops (set of 6) for soft drinks common. 12:25 head of first small bay. Macrolane runways common. 12:30 beginning of inundated trees. Great blue heron nests still in ^{beyond} area. 2 Hooded mergansers left area of inundated trees. Redheaded woodpecker, 2 black-capped chickadees at fence line. 12:35 great blue heron nest, cardinal, 2 chickadees. 14 nests in main tree making a total of 15 nests. All trees in area leafless except some oaks leaves of previous year or tree downed last year. 12:38 entrance second major bay. Ice plush masses about 20 per cent. 12:39 fence line half way up bay. Five masses of green vegetation on east side of bay. Good macrolane runways just before end of upper part of bay.

12:42 head of bay. fox sparrow, 4 black-capped chickadees, no raccoon tracks in sands of drainage. main stream into bay approx. 1 quart per six seconds. Good junipers on bench to east. Green vegetation associated with abandoned homesites and are crop associated plants. Rocks of ridge rounded. Fishermen have used this area and have left debris. Red-headed woodpecker, 2 tree sparrows, 12:45 E entrance of bay. Juncos 12(s. color), 12:48 fence line near end of trees, bald eagle soaring to east. Water clear & blue, no white caps because of protection here. 150 beyond is a rock fence that comes down to the lake. The trees that extend into lake are an extension of this fence line. 3 black-capped chickadees, downy woodpecker, song sparrow, 2 cardinals, 12:56 west gate of bay with solid rocks at head. Slush 80% in this side bay. 12:58 head of this bay to W. The solid rocks turn out to be a bridge. Downy, redhead woodpecker. This road is the old road that crossed the valley to the E. Large deer track 73 mm crossing bridge. The road 100' beyond bridge to E turns to N. Kingfisher. 1:00 east part of bay, yellow-shafted flicker, red-bellied woodpecker. 1:05 ^{old.} county road crossing, cardinal, 5 slate-colored juncos, 14 tree sparrows, 1 field sparrow. now following along level road at edge of bay. no coyote tracks. 1:13 leaving road and following along edge of bay. 1:16 tree line going across bay and is former road. 2 tree sparrows, 15 scoup flying out of bay to S, beaver cuttings. 1:18 old road bed into bay. Many meadowlark runways on road bed and in ungrazed field to N. 1:20 2 green-winged teal (♂♀) in protected edge of bay. Field sparrow. 3 mallards. 2 green-wing teal. 2 male green-wing teal. 1:25 gate or construction of bay. tree sparrow. 1:29 head of bay. This arm has pond at head. Red-headed woodpecker, 2 tree sparrows. This area has unique character of trees and topography. Water clear, red-bellied, 1:32 north gate good meadowlark area, many small openings in matted grasses for meadowlark sun bathing. muskrat entrance. Ice leave action along side of lake. Tree sparrow, 1:38 convergence large bay to narrow of river channel, now directly east of red house on hill to west. 1:40 crow, feed cleared for horse racing course. cardinal, coyote (live), 5 cardinals, 12 tree sparrows, 2 black-capped chickadees. 7 tree sparrows. 5 cardinals, 1:47 5 tree sparrows, song sparrow, 13 tree sparrows, 20 tree sparrows. 1:50 fence line just beyond inlet bay. 1:53 end of continuous field and bay extending into feed slopes from W drainage. Redtail. The drainage near the hills to W is 10 feet deep. It is necessary to cross this drainage at point where it leaves slope of hills. The farther away from inlet the deeper the entrenched drainage. 2 redbellied woodpeckers. At crossover noted a white breasted nuthatch, 4 black-capped chickadees. Raccoon tracks in

med at bottom of drainage. This would be a good area to check stratigraphic profile of valley, 4 treesparrows, 1 bobolink, 2:00 north end of gate of bay (a gate is the construction of a larger body of water to a smaller or inlet). From this location can see directly west ^{* background} a flat ridge that connects two prominent ridges or terminal knolls. 8 tree sparrow. ~~17~~ From this point on there was a malfunction of the recorder and no information was recorded beyond this point. The route continued along drainage however, to bridge 920 and thence return by county road to Ferguson road thence back to ear at Slough Creek bridge. Walked entire way. One return at white pines on Ferguson Road while looking up to see if mature ones were present, experienced an abrupt nausea and dizziness that continued for some time. Mileage from Slough Creek bridge to end of census 4.1 miles. From end of census to bridge 920 1.7 miles. From bridge 920 to Slough Creek bridge 5.2 miles or a total of 11.0 miles.

Summary of birds.

blue jays 2-

Niangua River, Missouri.

March 19, 1972

Annette P and I made canoe trip on Niangua River, leaving Lawrence at 1:30 P.M. with car and trailer and canoe at mileage 49716. Day clear and temp 70°F, wind approx 25 miles per hour. Route Olathe, Warsaw, Louisville, arriving at Bennett State Park at 6:00 P.M. at mileage 49917. Enroute 15 striped skunk road kills and generally distributed. Approx 30 opossum road kills. Birds rare because of wind. Only 5 redtails and 3 sparrow hawks. The first turkey vultures (2) were at Bennett Springs on the Niangua. Camped in Bennett Springs State Park. Frogs calling in evening like a bird chirping. There were very few people in the area and this pre-season time is preferred over the summer crowds.

March 20, 1972

Birds in Park include: common grackle, robin, Eng sparrow, mourning dove, red-bellied woodpecker, bluebird, bluejay, starling, meadowlark, chipping sparrow and a mammal the grey squirrel.

Put canoe in river, at first ford above Bennett Springs some 7-8 miles up river. Some observation on river for first part of river are: titmouse, 3 vultures, pileated woodpecker, A pileated woodpecker nested on the S side of a sycamore tree 25' high (the nest). It left the nest & flew N across the river. Three crows, 3 large turtles, 1 small turtle, cardinal, great blue heron, 3 large and 3 small turtles, one a soft shell. 10:40 Carolina wren calling, 32 turtles in 1/10 mi 10:45 pileated & red bellied woodpeckers, blue jay. 10:50 kingfisher. 10:56 bend and rapids. 10:58 10 turkey vultures in one group circling above high cliffs of river (to right), mourning dove. 11:15 2 woodducks, red-bellied woodpecker, slate colored juncos. 11:25 bend to W. 19 woodducks, brown creeper, black-capped chickadee. 12:00 east curve and fast water all along, robin. Lunch at 12:30 P.M. to 1:00 P.M. 1:05 3 ♂ & 1 ♀ greenwing teal, broad winged hawk, 1:20 crow chasing a grey squirrel at the crows nest. 1:40 bend, now to SE. 1:45 2 woodducks, large natrix. 2:25 rock in river, 2 ducks. Arrived ^{Bennett Spring} 2:45 P.M. or 4 hours & 15 min trip. The notes above, especially the latter part of trip are not complete. There is no difficulty on river except last part of river where as many as 3 channels diverge from main river. These are ^{partly} choked with small shrubs & trees. Water clear and cold. This is the best water level to travel of any season.

Left Bennett Spring at 3:20 P.M. and walked back to car where we left at 10:30 A.M. via main county road. ^{Kinds of} Birds observed are: red-headed woodpecker, red bellied woodpecker, robin, grackle, Eng. sparrow, starling, marmot & mole mammals, meadowlark, bluejay, grey squirrel, yellow shafted flicker, Carolina wren, ^{above} 2 pileated woodpeckers, yellow-shafted flicker, 9 redheads, These birds observed on grade thru forest up to top of ridge. Beyond were bluebird, crow, titmouse, Killdeer, wilson snipe. 4:22 Poverty Ridge store or dance hall. Beyond to river were redwings, grackles, downy woodpecker, cardinal, mockingbird. Arrived car 5:00 P.M. Mileage by car on return is 0 mileage at river, 1.3 at Poverty Ridge, 3.2 miles to base of hill at Bennett Springs.

This evening talked to Mr. Strickland of the Fisheries section of the Park. He says that big mouth bass are in Neosho River but not at Bennett Springs area. There are no bear or mt lion but bobcats and coyotes. Best time to float Neosho is first week in October. In July, August & September water is too low and weather is hot. Best time in spring is first week in May. Current River is larger and faster and there are many coves, Big Piney like Current. From Buffalo City to Bennett Springs the usual float time is 3 days - from Bennett Sp to Neosho Lake the time is 3 days. My estimation is 10 days.

March 21

Checked several points along the Neosho today. There is no camping at put-in N of Bennett Springs on other side of bridge. Informant at Buffalo ^{trip} said the Neosho takes 6 day to lake. June is month of high water. In winter the water freezes but river can be floated any time of the year. There is no camp site at Buffalo crossing. At junction S and E noted a fox & marmot. Continued on to N and to road S of the Lake of the Ozarks, then some route back to Lawrence. Total mileage 526 miles

Lakeview, Douglas Co., Kansas

March 25, 1972

Collected several examples, ⁴² of Leptodea laevissima from east side of the NW end of the oxbow lake. They were all on sandy shore and left as water receded. Some of the largest and most brilliant were near the base of the bank. These were placed at random except a few localized aggregates collected by raccoons. There was only one other species and the shore and this species represented by two shells only. The largest measured 162 x 108 mm.

Lawrence, Douglas Co., Kansas

March 28, 1972

Selected piano compositions recorded this date.

- 720328-1 Scarlatti: Sonata in E major, (Longo 430)
- 720328-2 Scarlatti: Sonata in A major, (Longo 483)
- 720328-3 Scarlatti: Sonata in G major, (Longo 209)
- 720328-4 Schubert: Impromptu in G-Flat Major, Op 90, no. 3.
- 720328-5 Scriabin: Poem F Sharp major, Op 32, no. 1
- 720328-6 Scriabin: Etude in C-Sharp Minor, Op 2, no. 1
- 720328-7 Scriabin: Etude in D-Sharp minor, Op. 8, no. 12
- 720328-8 Scarlatti: Sonata in E major (Longo 23).
- 720328-9 Scarlatti: Sonata in G major (Longo 335).
- 720328-10 Debussy: Clair de Lune (moonlight)
- 720328-11 Clementi: Monferrina no. 2
- 720328-12 Clementi: Monferrina no. 6
- 720328-13 Handel: Largo
- 720328-14 Beethoven: Adagio "moonlight" Sonata.
- 720328-15 Chopin: Prelude
- 720328-16 Sinding: Rustle of Spring.

Lawrence, Douglas Co., Kansas

wren April 11, 1972

House wren arrived at 402 Yorkshire this date and established territory at nest box.

wren above April 13, 1972

Offered first song and continued on a regular basis

April 19, 1972

Female house wren arrived this date and joined ♂ at nesting box.

West Univ. Kansas Campus, Lawrence, Douglas Co., Kansas

April 27, 1972

Noted a marmot at intersection (4 way stop) just E of Dr. James Campbell's residence. It chose to run from one car to the other as the cars stopped at intersection. It finally ran to residential area to the NW of intersection. Also observed a rose-breasted grosbeak here. The species is observed in the same area each year. On April 29, a marmot, could be same individual, observed at the field N of Hellcrest School some 1/2 mile from where the one was observed above on April 27.

¹ 402 Yorkshire, Lawrence, Kansas May 13, 1972
Starling systematically robbing nest & Ensign & Martin probably successful nests in nest boxes.

Perry Reservoir, Jefferson Co., Kansas
May 5, 1972

museum Techniques Course to Paradise Point. materials needed
conse, paddles, life preservers, sponge, food, milk, butter,
boots, raincoat, shoes, jacket, bird book, skin kit, cotton, traps,
tow, thread, clay, oat meal, corn meal, ice box, binoculars, watch,
journal, pen, skin. pans, black glass pins, maps.

Robert Wallner & Stephen Peckham + I drove to Paradise Point
at 1:00 P.M. and established Camp at NW corner Point of the
peninsula. At 3:30 P.M. set 100 trap in field of switch grass
with general weed debris at base. This field is SE of the
circular turn around just S of entrance to the park.
all traps in runways or feeding corridors. Complete overhead
protection. Lake approx 100' beyond. One small mammal
observed. Considerable cut grasses and some green feces.
Completed line at 4:30 P.M. High wind, high clouds overcast
and temp approx 75° F. Wind approx 25 mph. Birds in area
are bluewing teal, coot, cormorant, Forster tern, ring-billed
gull, duckbill, cowbirds, meadowlark, red-winged blackbird.
In forested area: bluejay, redhead, Baltimore oriole, chipping
starling, grackle, turkey vulture, mourning doves. Other birds are:
Franklin gull, barn swallow, bobwhites, cardinal, blue bird, titmouse
red-bellied woodpecker, orchard oriole, shrike, redstart, robin, downy.

From trapline caught the following (8:00 P.M. to 8:30 P.M.)

- 1 *Synaptomys*
- 2 *Synaptomys lemniscans*
- 17 *Micromys ochrogaster*

May 6, 1972

Other birds. Goldfinch, crested flycatcher, Cottontail. Brown
thrasher, eastern kingbird. Inspected trap line set last night. This
field is being allowed to return to native plants and grasses and as
yet has not been cut which is routine for other areas of Paradise
Point. There did not seem to be a preference for small mammal
use of field, however, edge effect had some control in increased
numbers. Low cut grass associated with this area did not support
mammals. If these areas could be maintained in this
condition of succession, not to low or high, the small mammals
could build up a tremendous population for predatory species
such as weasels, marsh hawks etc. Cutting grass in such a
way as to leave adequate protection or islands of vegetation may
have same effect as ^{large} grazing animal in keeping the condition prairie.

36
mammals captured from traps (100) set last night. Interval space 20' and linear. (Includes those caught 4 hrs after traps were set) Locality is: 800' W, 1900' S of NE corner sec. 19, T9S, R18E, Paradise Point, Jefferson Co., Kansas.

MICROTUS OCHROGASTER

Species diversity is:

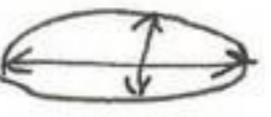

Redmond Reservoir, Kansas

May 19, 1972

Annette C Bee reported approx. 45 pelicans on reservoir

Highway 59 and Wakarusa River, Douglas Co., Kansas

May 20, 1972

Collected a *Proptera purpurata* 720520-1 from river below bridge.
 It measured 122 x 900 . Length included heel.

Lakeview, Douglas Co., Kansas

May 28, 1972

Measured *Natrix* (40 inches long) ^{road} on dike across Lakeview Lake.
 It has been run over by car.

End Tennessee St to end Iowa St via Santa Fe tracks, Lawrence,
Douglas Co., Kansas

June 9, 1972

Tracks at N end Tennessee St. 9:15 A.M. Day windy, temp 60°.
 Yesterday temp 98°F.

grackle 114-2-1, Baltimore oriole 1, starling 1-1, house wren 1, mourning dove, cardinal 1.

9:23 first small creek - catbird 2, B. oriole 1, house wren 1, mourning dove 1-1-1, starling 1-1, red bellied woodpecker 1, robin 1-1-1-1-2-1-1-2-1 yellow shafted flicker 1, grackle 1-2-1-2-6-2-2-1-4, Bell's vireo 1-1-1, titmouse 2, mourning doves 2, starling 12(young), 6-2-6-4, red-headed woodpecker 1, cowbird 2, black-capped chickadee 2, Baltimore oriole 1.

9:45 water plant crossover. Cowbird 1, Eng. sparrow 2, crested flycatcher 2, grackle 1-1-1-2-3-6-2-4, 18, house wren 11, indigo bunting 1-1, Baltimore oriole 1-1-1-1, starling 2-2-34-2 (4 were light brown colored), robin 1-1, brown thrasher 1, black-capped chickadee 1-1-1-1, titmouse 2, yellow billed cuckoo 1, crested flycatcher 1, blue jay 1, downy woodpecker 1, warbling vireo 1, cardinal 1, mourning dove 1, black billed cuckoo,

10:15 railroad bridge at N end of cottonwood grove, open field beyond. barn swallow 1-1-1-1-1-1, green heron 1, indigo bunting 1-1, grackle 1, starling 6, mourning dove 1-1-1, deckassel 1-1-1, meadowlark 1-1, redwing blackbird 1, cowbird 1.

10:40 under turnpike - mocking bird, deckassel 1, starling 2.

10:45 private road crossing tracks - robin 1-1, deckassel 1-1-1-1, bobwhite 1, grackle 1-2, redwing 1-1-1, barn swallow 1-1-1-1, cowbird 2, approx 1/10 mi S of R.R switch are 3 good fossil rocks.

40
 11:00 R.R. switch to W. - yellowthroat 1, dickcissel 1-1-1, starling 1-2-2, redwing 3-1-1, Baltimore oriole 1, grackle 2-3-1, meadowlark 1-1, bobwhite 1, robin 1, mourning dove 3, cowbird 1,
 11:20 bend in tracks beyond Calgary Chemical switch - cowbird, dickcissel 1-1-1-1, Baltimore oriole 1, downy woodpecker 1, robin 1-1, cuckoo 1, chimney swift 1, meadowlark 1, eastern phoebe 1, moun-
 ing dove 1, killdeer 1, Arrived road (N end of Iowa) at 11:40 A.M.
 Continued across graded field at commercial complex and
 picked up a fat scrapper no 720609-1

Summary.

Peterson or

~~Hallmark Pond, N Peterson Rd, Douglas Co., Kansas~~

June 9, 1972

at sundown (10 minutes before) a woodduck arrived from E and alighted on pond. It left at 10 minutes after sundown and flew east. Caught 12 Lepomis macrochirus (bluegill sunfish) 2 Lepomis cyanellus and 2 Lepomis

~~Lawrence, Douglas Co., Kansas~~

June 9, 1972

Information from Dr Frank W. Wilson of Geology Dept that might be useful for Prairie National Park:

Chase Co could be recommended for mapping (U.S.G.S. tops) if National Park so requests. It takes approx. 4 years to get final map. Walter Kollmorgen (434 Lindley, KU) is interested in the Flint Hills and may have maps of the area being considered by National Parks.

U.S.G.S. topo maps of 1889 of some of the Flint Hills still stand as maps for the area but they are not accurate.

~~Lawrence, Kansas Power & Light Co to Callery via Santa Fe tracks, Douglas Co. Kansas.~~

June 11, 1972

Start at Lakeview but recorder failure to first drainage east of Power Plant. Birds in area of drainage are: yellow-billed Cuckoo, black-billed cuckoo, 20 starling, yellow warbler, great crested flycatcher, robin, bobwhite, mourning dove, red-headed woodpecker. Birds prior to this drainage are in recollection are: duckbill, redwing, m. dove, starling, black-billed cuckoo, yellow-billed cuckoo, Baltimore oriole, chickadee, redheaded woodpecker, sparrow hawk, meadowlark, Eng sparrow, chimney swift, flicker (y.s), bobwhite, dodge bunting, cardinal

From this drainage will keep complete record to Callery switch off. Cardinal, yellow-billed cuckoo, bobwhite, great crested flycatcher, redhead woodpecker, Baltimore oriole, bobwhite, blue jay, chickadee, Bell's vireo, bluebird, 2 Baltimore orioles, T. bird, robin, fox squirrel, mourning dove, robin, dodge bunting, cardinal, bluejay, redwing, 2 Baltimore orioles, 2 cardinals, cowbird, 11:36 crossing road that leads to field across tracks, 3 Eng sparrows, 2 redwings, starling 2 redwings, B. oriole, B. oriole, 2 redwings, 2 duckbills, duckbill, redwing, duckbill, redwing, 2 redwings, robin, duckbill, 8 starling, 2 redwings, meadowlark, 4 starling, duckbill, mourning dove, starling, duckbill, redwing, 13 starling,

11:50 Callery switch, now side branch, redwing, 5 redwings.
dickcissel, bobwhite, redwing, grackle, shrike, grackle,
12:00 switch to Callery Plant (now abandoned) but continuing
main sidebranch, B. oriole, 8 starling, cardinal, 5 starlings,
mockingbird (white in tail does not show until at sunset), the
white of wing is pure white, mourning dove, grackle, bobwhite,
brown thrasher, 4 grackles. 12:04 beginning of wooded area
to left. 2 mourning doves, yellow-billed cuckoos, robin, 2
chickadees, robin, cardinal, dickcissel, robin, B. oriole,
meadowlark, flicker 12:15 end of clusters at main road (N end
of Iowa).

Lawrence, Douglas Co., Kansas

June 15, 1972

Made census of birds from Museum of Natural History at K.U. to
402 Yorkshire Dr via walking (approx 3½ miles),

Clunney swift, bluejay, Eng sparrow, nighthawk, cardinal,
yellow-shafted flicker, starling, goldfinch, robin, B. oriole,
titmouse, grackle, mourning dove, house wren, Bell's vireo,
redheaded woodpecker, meadowlark. Practically all the different
kinds were on campus at K.U. City area did not contribute beyond
initial census. It would be interesting to make census across
the city in several directions and correlate birds with principal
highways, residential areas, business areas, peripheral versus
central area. Noticed for that traffic noises drowned out the
calls of birds.

Lawrence, railroad tracks (Santa Fe) from end Tennessee St to
end Iowa via Callery turnoff, Douglas Co., Kansas

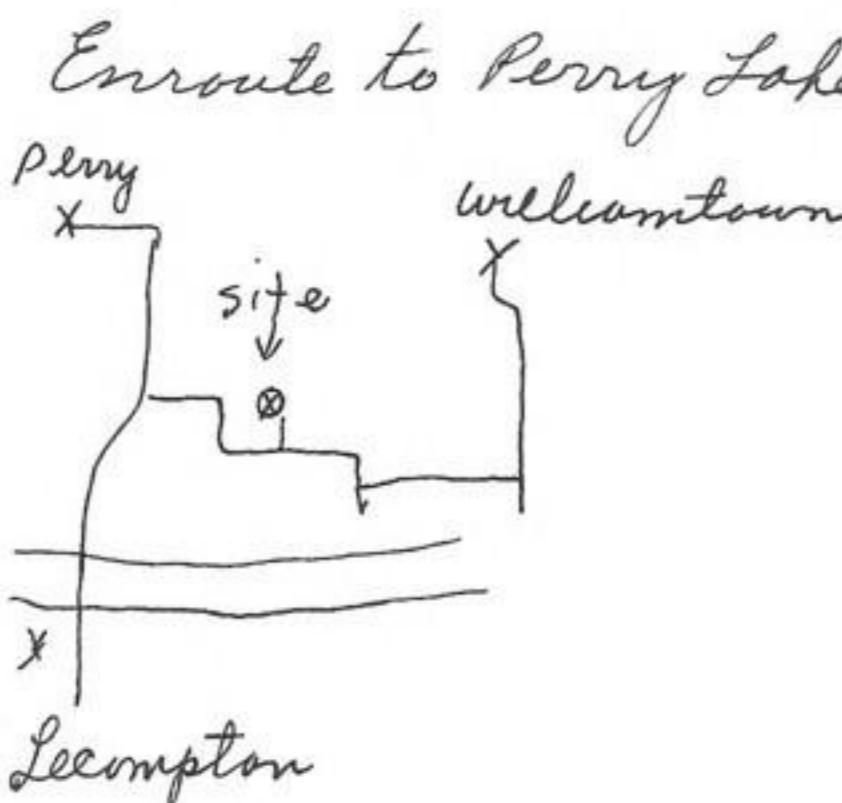

June 18, 1972

Made complete census of birds and mammals from tracks, morning
7:15 A.M. 2 black chickadees, 4 grackles, 2 grackles, 15 grackles,
B. oriole, 8 grackles, yellowthroat, catbird, cardinal, catbird,
house wren, brown thrasher, cardinal, brown thrasher, 7:20 first
drainage ditch just beyond curve, B. oriole, house wren, cardinal, red-
eyed vireo, marmot ^{train} road kill, yellow-billed cuckoo, 4 starlings, M. dove,
B. oriole, yellow-shafted flicker, 2 grackles, M. dove, 2 robins, robin,
brown thrasher, robin, robin, catbird, 4 robins, 3 grackles, bluejay,
2 cardinals, house wren, 2 titmice, 4 robin, Bell's vireo, redheaded
woodpecker, cardinal, 4 Eng sparrows, robin, catbird. 7:30
waterworks crossover. Sky 90% clear. No wind among trees

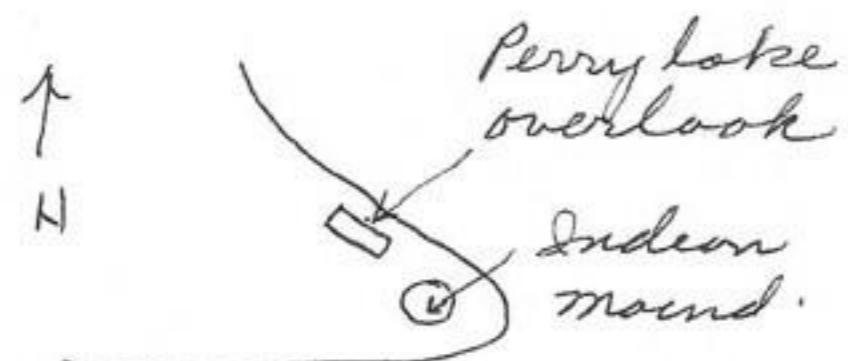

but some in open fields. redheaded woodpecker, B. orole, m. dove, house wren, robin, 6 robins, red-bellied woodpecker, 2 mockingbirds, 7 grackles, yellowthroat, chickadee (2), 8 grackles, B. orole, bluejay, B. orole, robin, Indigo bunting, Chickadee, robin, B. orole (3), Cardinal, 2 robins, redhead, B. orole, robin, chickadee, blue jay, B. oroles (2), M. dove, yellow-billed cuckoo, 7:47 bridge at end of forested area. red-bellied woodpecker, phoebe, Left this bridge at 8:05, 1 grasshopper sparrow ?, yellowthroat, redwing, bobwhite, chickadee, M. dove, barn swallow, 2 grackles, starling not as numerous as previous trip, mourning dove, yellowthroat, barn swallow, downy woodpecker feeding on mulberries, barn swallow, 4 grackles 8:25 turnpike, redwing, robin, grackle, m lark, redhead, M. dove, duckessel, M. dove. 8:30 private roadway across tracks. duckessel, Indigo bunting, meadowlark, duckessel, redheaded woodpecker, duckessel, duckessel, B. orole, robin, 2 duckessels, redwing, yellowthroat, 4 redwings, 8:41 railroad switch from main line, now toward Kollery. 2 duckessels, robin, 2 bobwhites, B. orole, 2 redwings, robin, redwing, bobwhite, 3 meadowlarks, green heron, duckessel, grackle, grackle, 19. grackle, mockingbird, meadowlark, 2 starling, meadowlark, redwing, bobwhite, meadowlark (2), 9:00 middle of bend & beginning of deciduous trees on left, redheaded woodpecker, robin, 2 robins, cardinal, carolina wren, robin, 2 grackles, indigo bunting, robin, B. orole, mourning dove, cardinal, eastern phoebe, meadowlark, robin, 9:10 end of Java street and end of complete census. Across flat of commercial plant area observed 3 killdeer which were the only ones birds observed. Home at 11:00 P.M.

Perry Lake, Jefferson Co., Kansas

June 25, 1972

Enroute to Perry Lake, Checked Hopewellian Indian site NW of Perry

abandoned home and barn. This area is now in corn and impractical to visit. In fall after plowing will check the area. Gilbert said he picked up potsherds 6" in diameter. Continued to Perry Lake and at the Look over station on top of hill beyond the west end of the dam visited an old Indian site.

This mound is just beyond Overlook and to the SE some 40'. It overlooks Delaware valley & Kaw Valley at a most advantageous position.

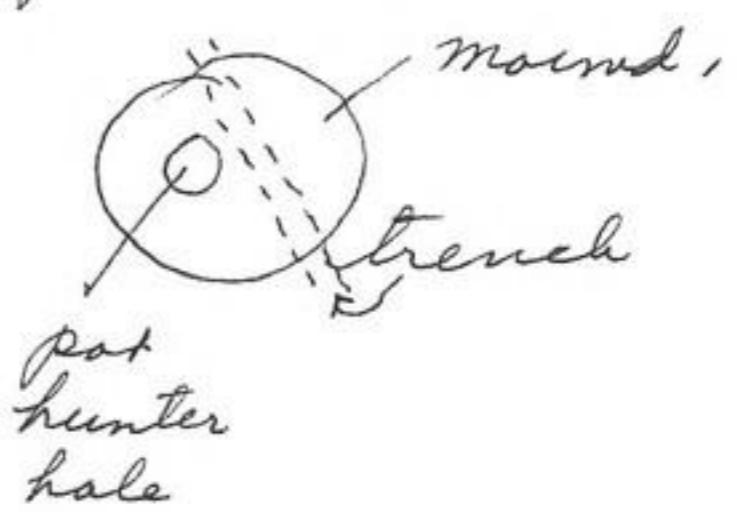

a trench has been dug across the mound and a pot hunters hole near center. At approx 1/10 mi w of this site at edge of forest, ^{2:00 P.M.} on S slope flushed a chuck-wells-widow and 1 of her two young. The first bird that left the ground was was the adult that flew 20' and alighted 20' away. It scolded and demonstrated injured behaviorism on the ground and then flew into tree some 100' beyond. This adult bird remained in area the entire time and came as close as 25' and as far as 70', chacking at all times. At the call of the young which I held in my hand the adult would come nearest and usually present injured behaviorism. When standing upright the wings would point slightly forward ^{and off}. The tail appeared unusually long. The young flew 25' at the time the adult left, and alighted on ground. It flew 3 times for this length of flight (25' each time) but remained still on the fourth approach. It opened wide its mouth when touched. The second young remained crouched at all times until picked up. It could fly but not as good as the other young. The young when pursued hop rhythmically with a ~~rhythm~~ ^{rhythm} rhythm regardless of obstacles or barriers. The wide mouth is used as a defensive behaviorism. The young measured (total length) 147 mm

In lake along dam caught approx 50 fish with fly and they included bass, bluegill, green sunfish (all small).

Perry Reservoir, Jefferson Co., Kansas

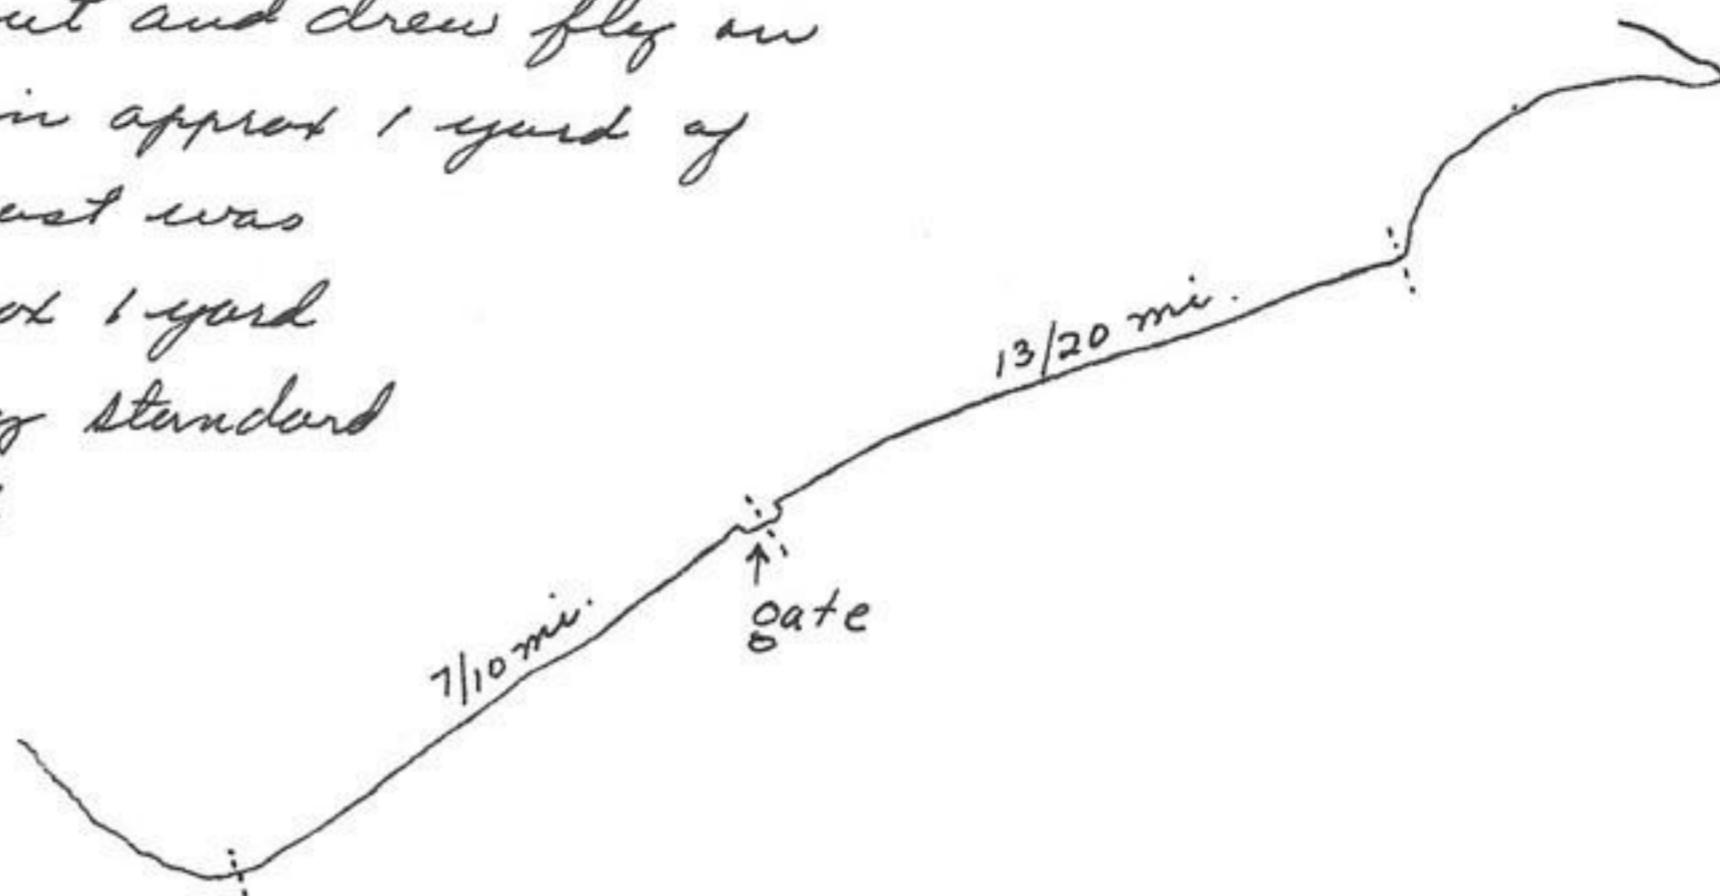

June 29, 1972

Fished curve of w end of dam from 200' beyond curved (east) to point where shore contacts native hillside, starting at 5:30 P.M. at hillside shore. Fish record consecutively and by length. greenfish 130, greenfish 85, bluegill 115. 6:15 P.M. logs at bend. bluegill 120, 6:45 P.M. bluegill 108, bluegill 112, end of line at 7:00 P.M. Breeze audible, waves slight, sky clear, sun at 7:00 1 hr from ridge.

Perry Reservoir, Jefferson Co., Kansas
July 1, 1972

Fished dam from outlet gate to curve at w end. This distance is $\frac{7}{10}$ mi. Cast approx 30 feet out and drew fly on 14 hook to within approx 1 yard of rocks. Each cast was separated by approx 1 yard will list fish by standard Texas length and consecutively as caught.

Started at gate 8:27 with water at 99 1/2 feet.

B = blue gill

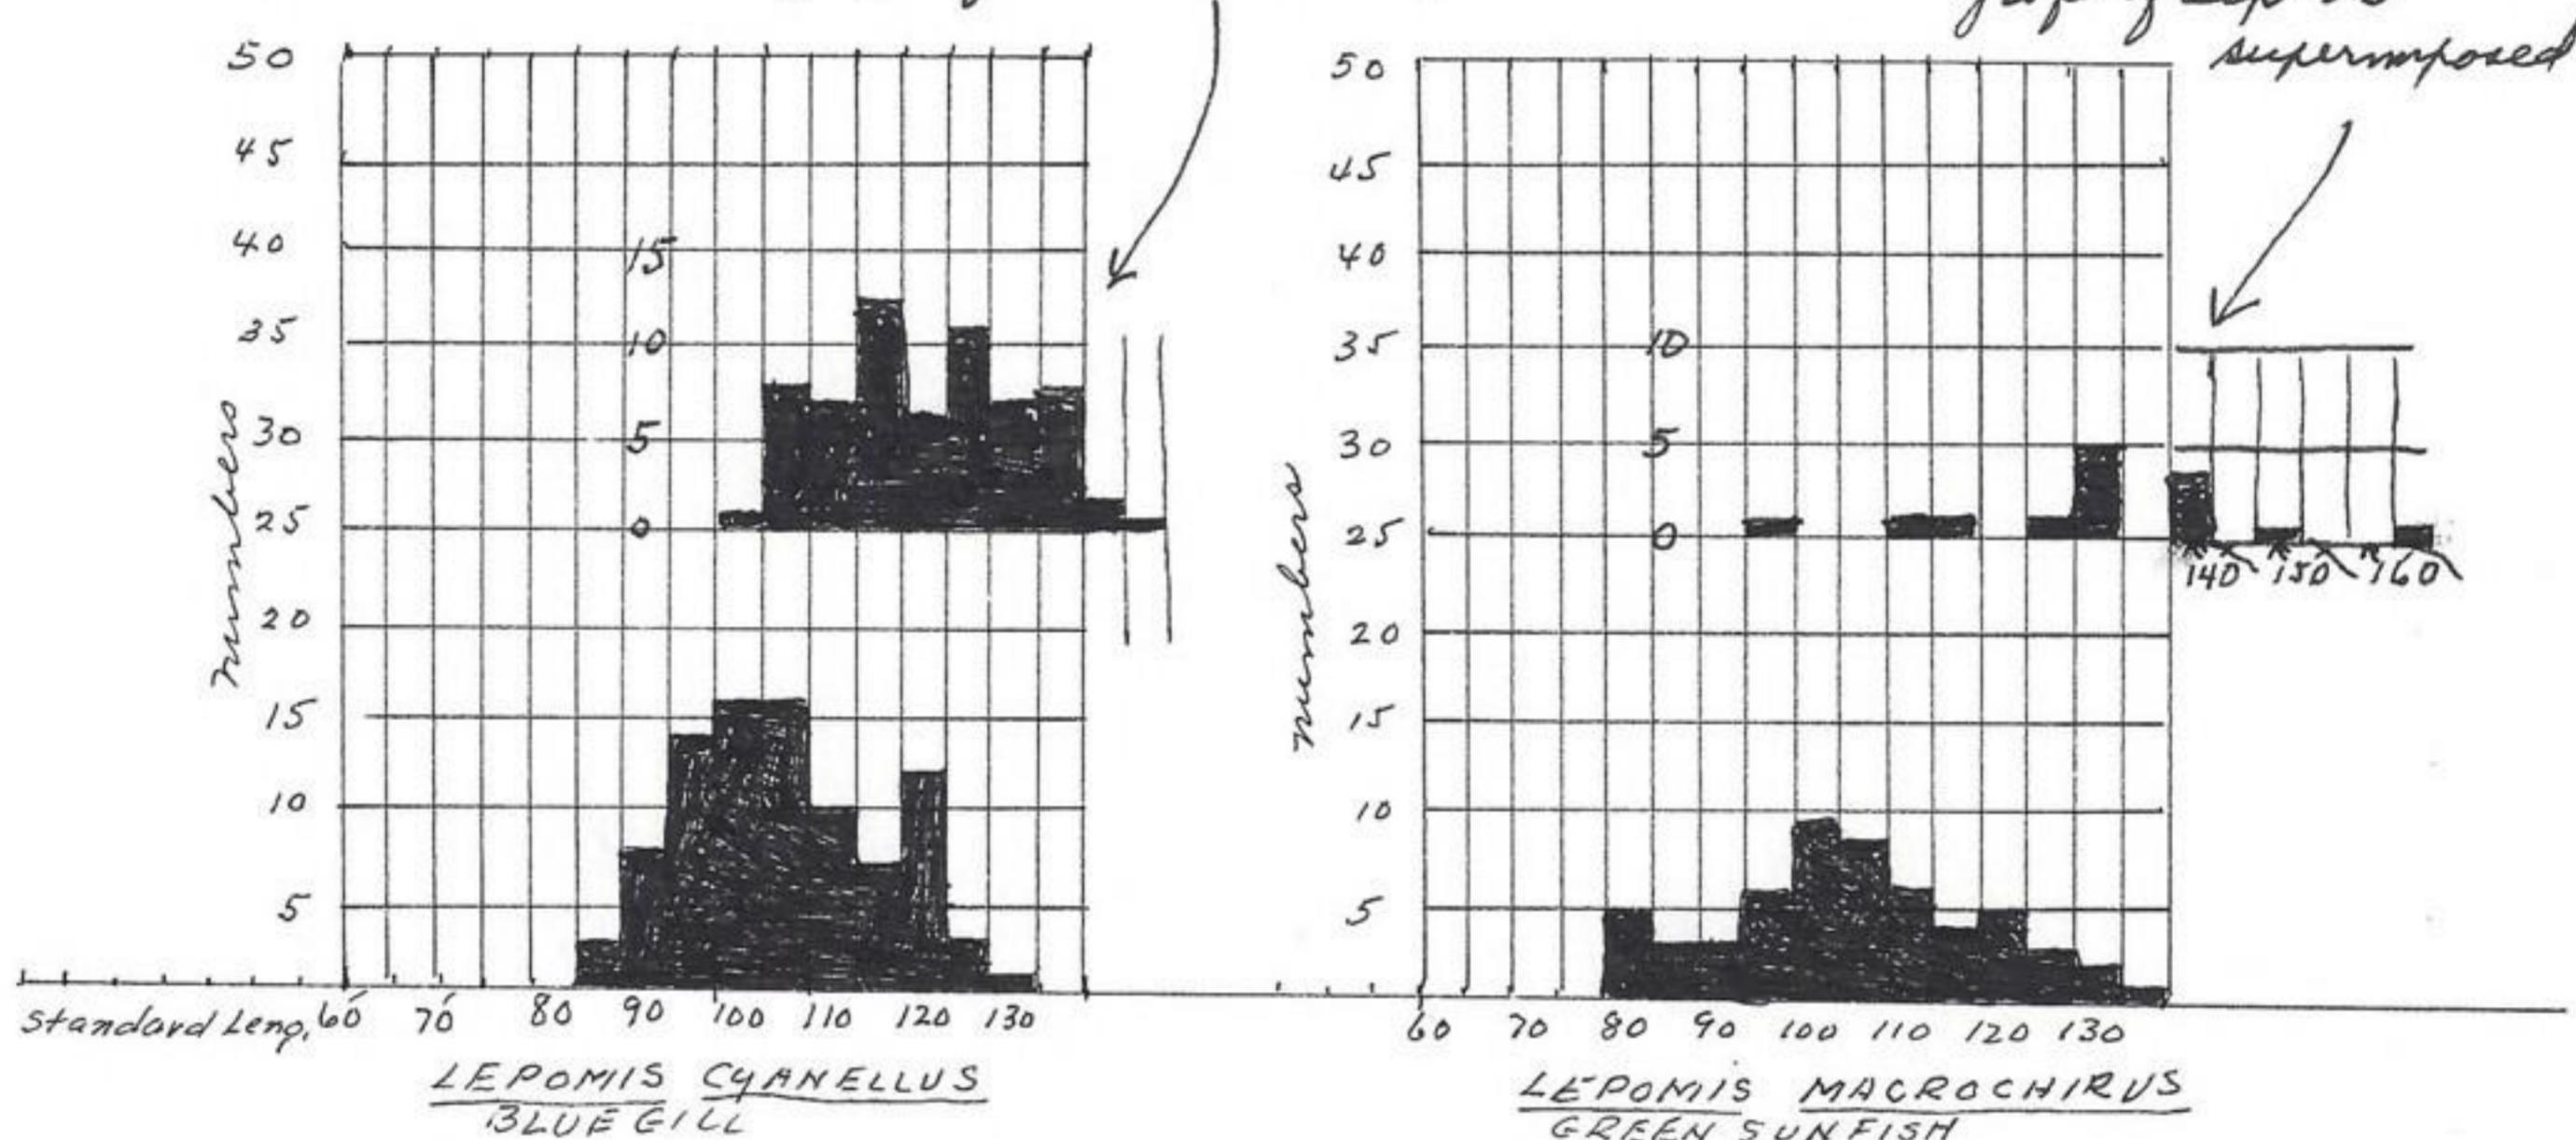

G = green sunfish

day overcast and weather variable with winds in late morning to gusts. Later winds subside but always ripples. Wind from N.E. Grackles along dam and only bird. They leave in middle of day graft of Sept. 23 superimposed

In comparison of this date and the census of June 29 in part of this area would say that there is a decided difference in feeding behavior. In the late afternoon of June 29 the day was hot and clear and the fish were not feeding whereas today the sky was clouded and cool with winds to create a water surface agitation that is protective for fish exposure.

Enroute to Perry Lake this morning recorded the kinds of bird: (left 7:30, via road just N of turnpike, thence to Leavenworth, Perry etc.). meadowlark, Eng sparrow, starling, barn swallow, dickcissel, grackle, killdeer, redwing, mourning dove, cowbird, cardinal, bluejay, bobwhite, (Kansaskiu), indigo bunting, 780 mm kingsnake. (Perry), mockingbird, (SE Perry Lake area). From here to End dam - barn swallow, mourning dove, meadowlark, bobwhite, robin. In walking on top of dam from west end to gate noted 10 individual grackles either on rocks or slope or near water. They are most commonly seen in morning or late afternoon and are the only birds using the dam area on N side. Wave action from passing motor boats must be an important factor in fish feeding. One bullfrog (large) among rocks ^{in water} and calling and only one observed. Water among rocks not used by fish.

Lawrence, Douglas Co., Kansas

July 4, 1972

by walking

Made census of birds, from museum Natural History at K.U. to 402 Yorkshire, keeping list of kinds of birds per unit of route. Today is characterized by firecrackers on all side and this noise seemed to influence numbers of kinds and especially singing of birds. Left museum 11:28 A.M. and traversed Fowler Grove and Patters Lake seeing - robin, Baltimore oriole, starling, Catbird, cardinal, bluejay, chipping sparrow, eastern Kingbird, eastern pewee, swallow sp., mourning dove. At 11th Street & main at 11:55 A.M. For the next block observed bluejay, Eng sp., brown thrasher, cardinal, starling, robin. 10th & main. Eng sparrow, robin, bluejay, starling. 9th & main Eng sparrow, starling, titmouse, cardinal. 8th & main. Eng sparrow, starling, mourning dove. 7th main. robin, cardinal, Baltimore oriole, Eng sparrow, starling. 6th & main starling, Eng sparrow, house wren, robin. 5th & main grackle, robin, Eng sparrow. 4th & main Eng sparrow, catbird, robin, house wren. 3rd & main. no birds, 3 and missouri - robin, Eng sparrow, bluejay. 3rd & Arkansas - Eng sparrow, eastern Kingbird, robin, 3rd & michigan - catbird. 3rd & Florida - robin, Eng sparrow. 3rd and minn(?) - robin, 3rd & Wisconsin (newton) - Eng sparrow. Now to W which would be equivalent to extension of Princeton Ave - yellow-billed Cuckoo, Eng sparrow, eastern Kingbird, Mt Hope Nursery (entrance) robin, cuckoo, Eng sparrow, robin, Turnpike no birds. Iowa and Princeton (?) - meadowlark, martin, Eng sparrow, robin. Kingston & (Toco) robin, martin, Eng sparrow, Westchester martin, Eng sparrow, robin. Home at 12:45. Numbers of occurrence of birds in each section are:

17	Eng sparrow
15	robin
7	starling
4	cardinal
4	bluejay
3	Catbird
3	eastern Kingbird
3	purple martin
2	mourning dove
2	house wren
2	Baltimore oriole
2	yellow-billed cuckoo
1	Chipping sparrow
1	eastern pewee
1	swallow sp.

1	brown thrasher
1	titmouse
1	grackle
1	meadowlark

Camp Kivawood, SW Ottawa, Kansas

July 9, 1972

In 39 miles of country road from Kivawood Camp to Lawrence noted the following kinds of birds: (route directly N using right hand roads when obligatory and then N again at first available road. This route ends just E of Lone Star Lake. Day hot and slight breeze. Annette P and Dennis Dailey accompanied.

Mockingbird.

Lawrence, Douglas Co., Kansas
July 14, 1972

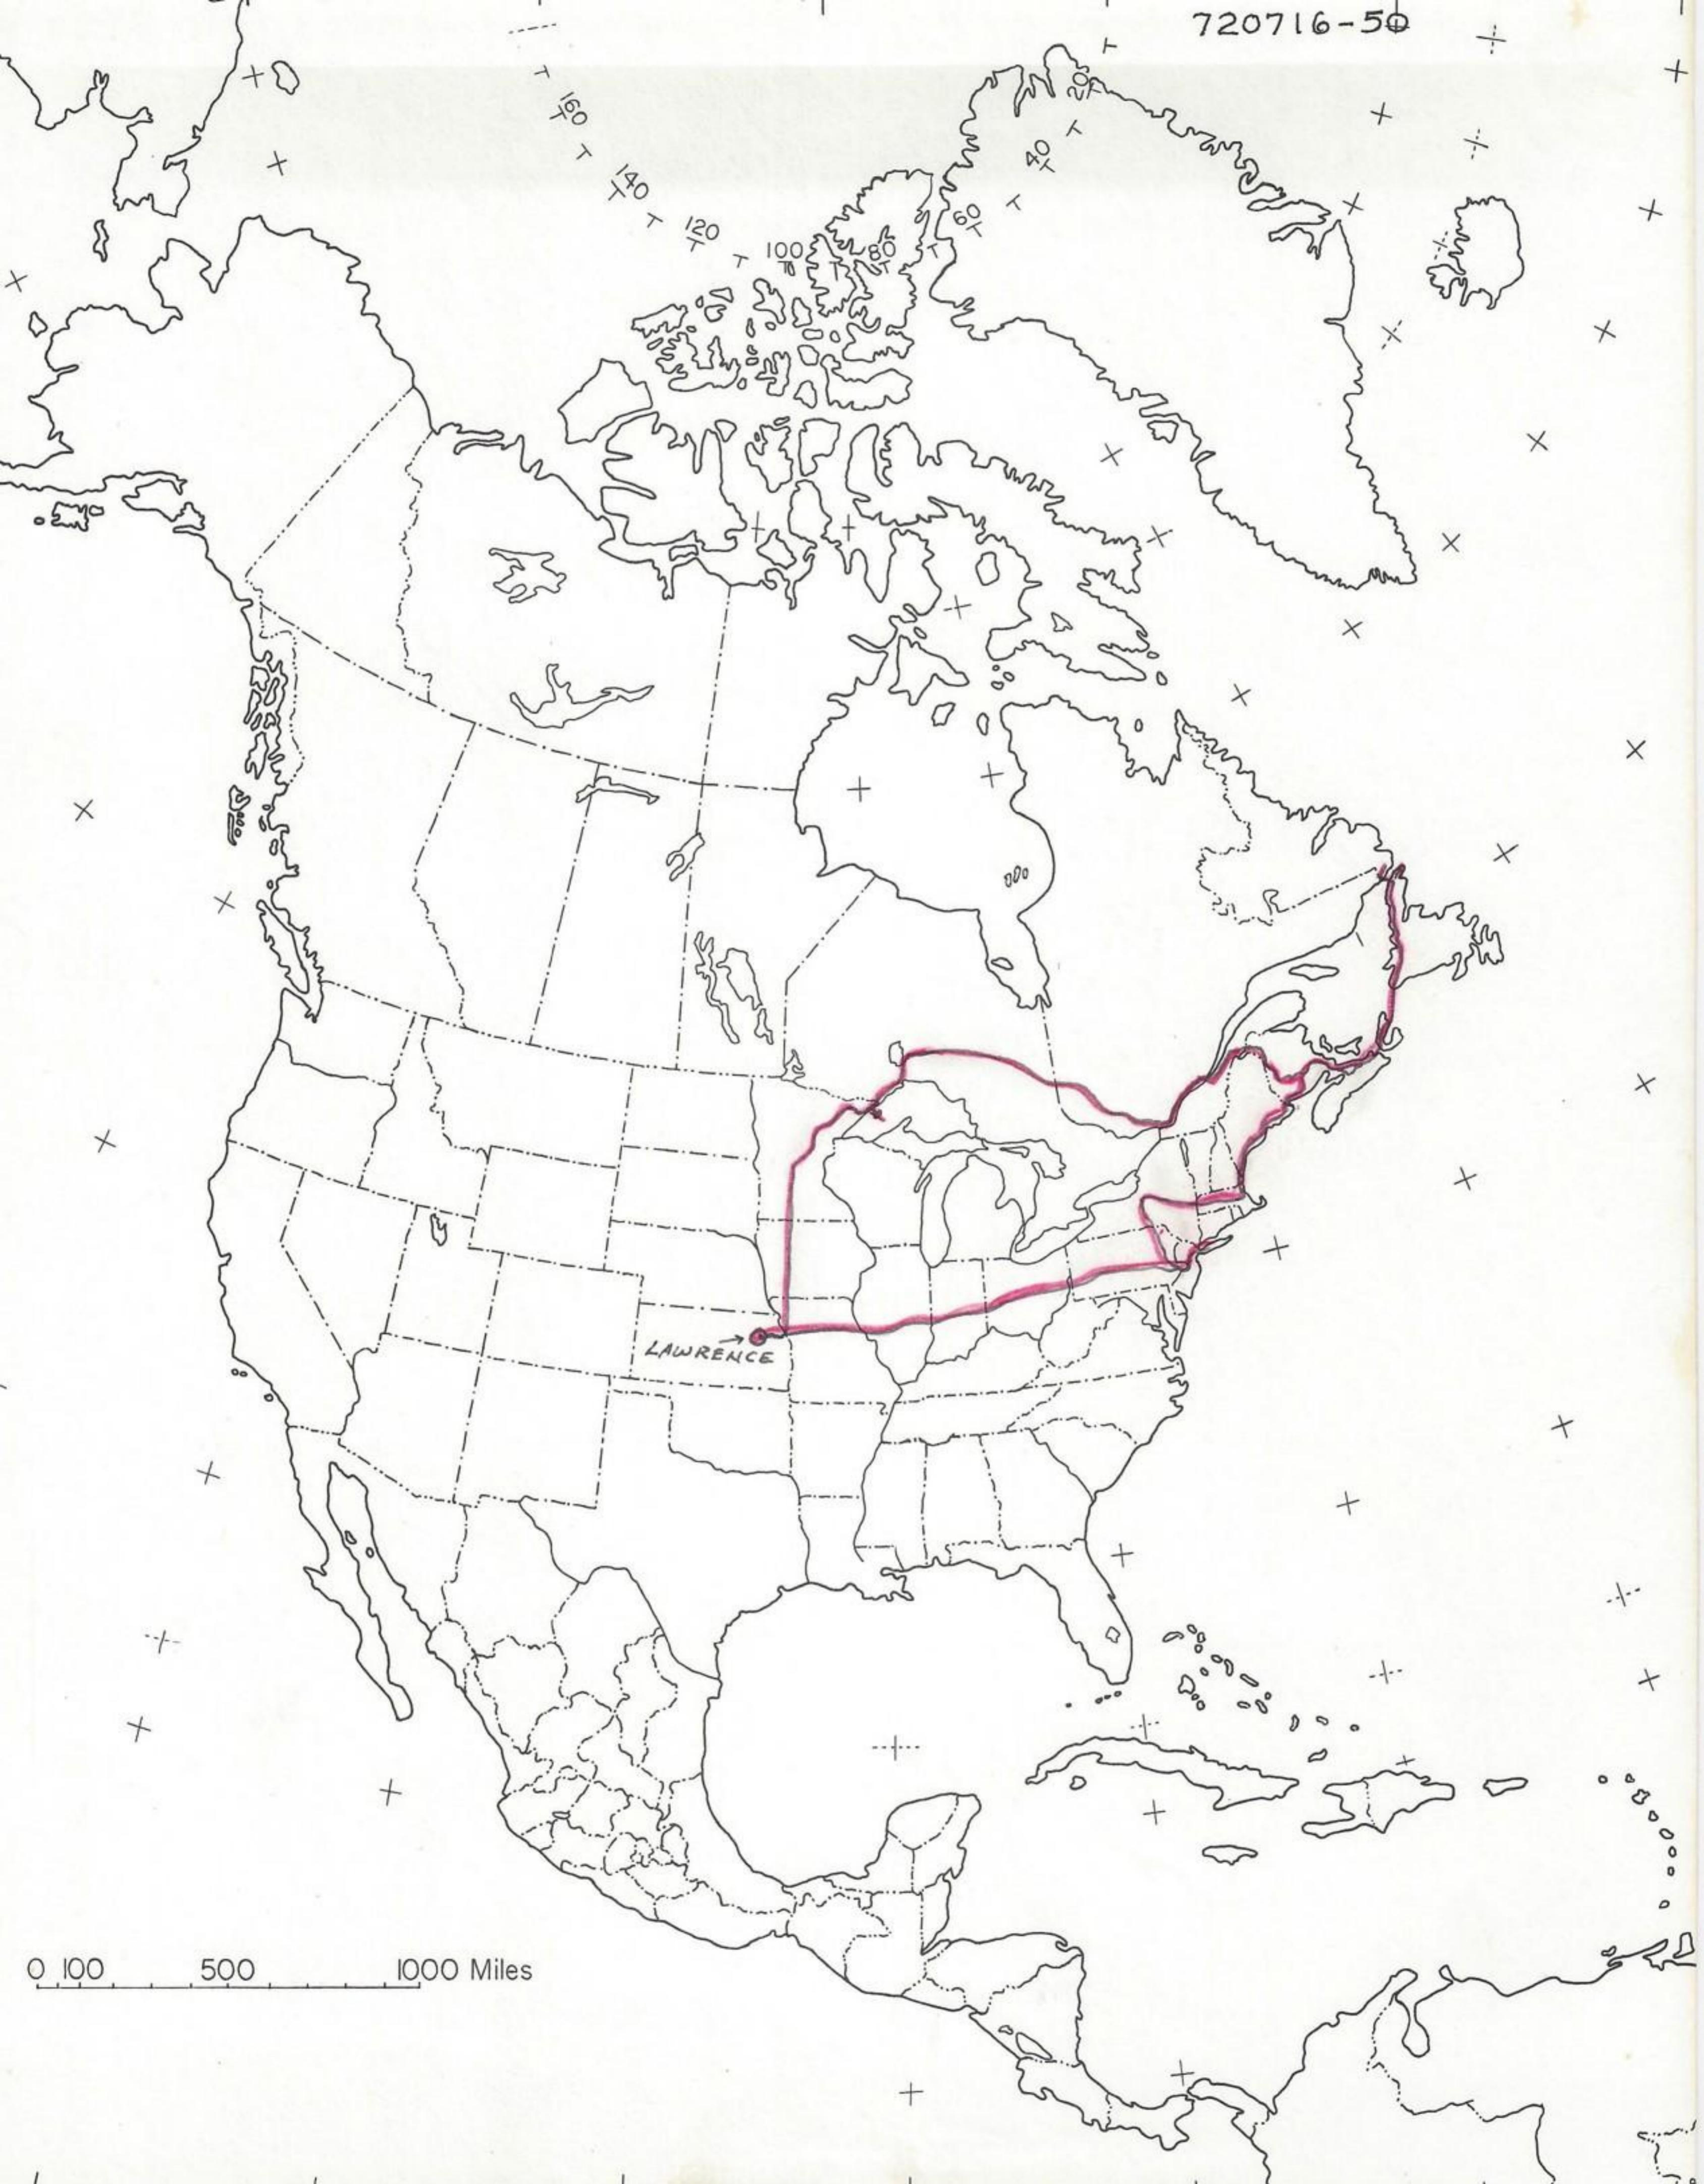

made preparations for vacation trip to NE U.S. needed to be done:
adjust brakes, new tires, change transmission oil, check trailer
tires and brakes, butane tank valve and lights. Install battery.
Grease & change oil in car; mammology book, 40 were for shrews,
thread labels, new valve for butane tank, extra hitch or address
where it can be purchased, insurance card, cotton, rain hat
coat and pants, boots, thin leader for 16 hooks, 2 fly poles
and line, camera, meter, lens, film, scope, 2 pr binoculars,
dry case, skin equip, traps, bait, jock, chain, radio, shaver,
hot water plug-in, max-min thermometer, tree book, bird book,
cats, fish pond, spectacles, Simpson book, fluorescent lamp,
2 life preservers, small note books & journal paper, drivers
license and registration of car, traveling shoes, hiking shoes,
recorder, watch, field folder note book, bat net, monkey teeth

Lawrence, Douglas Co., Kansas

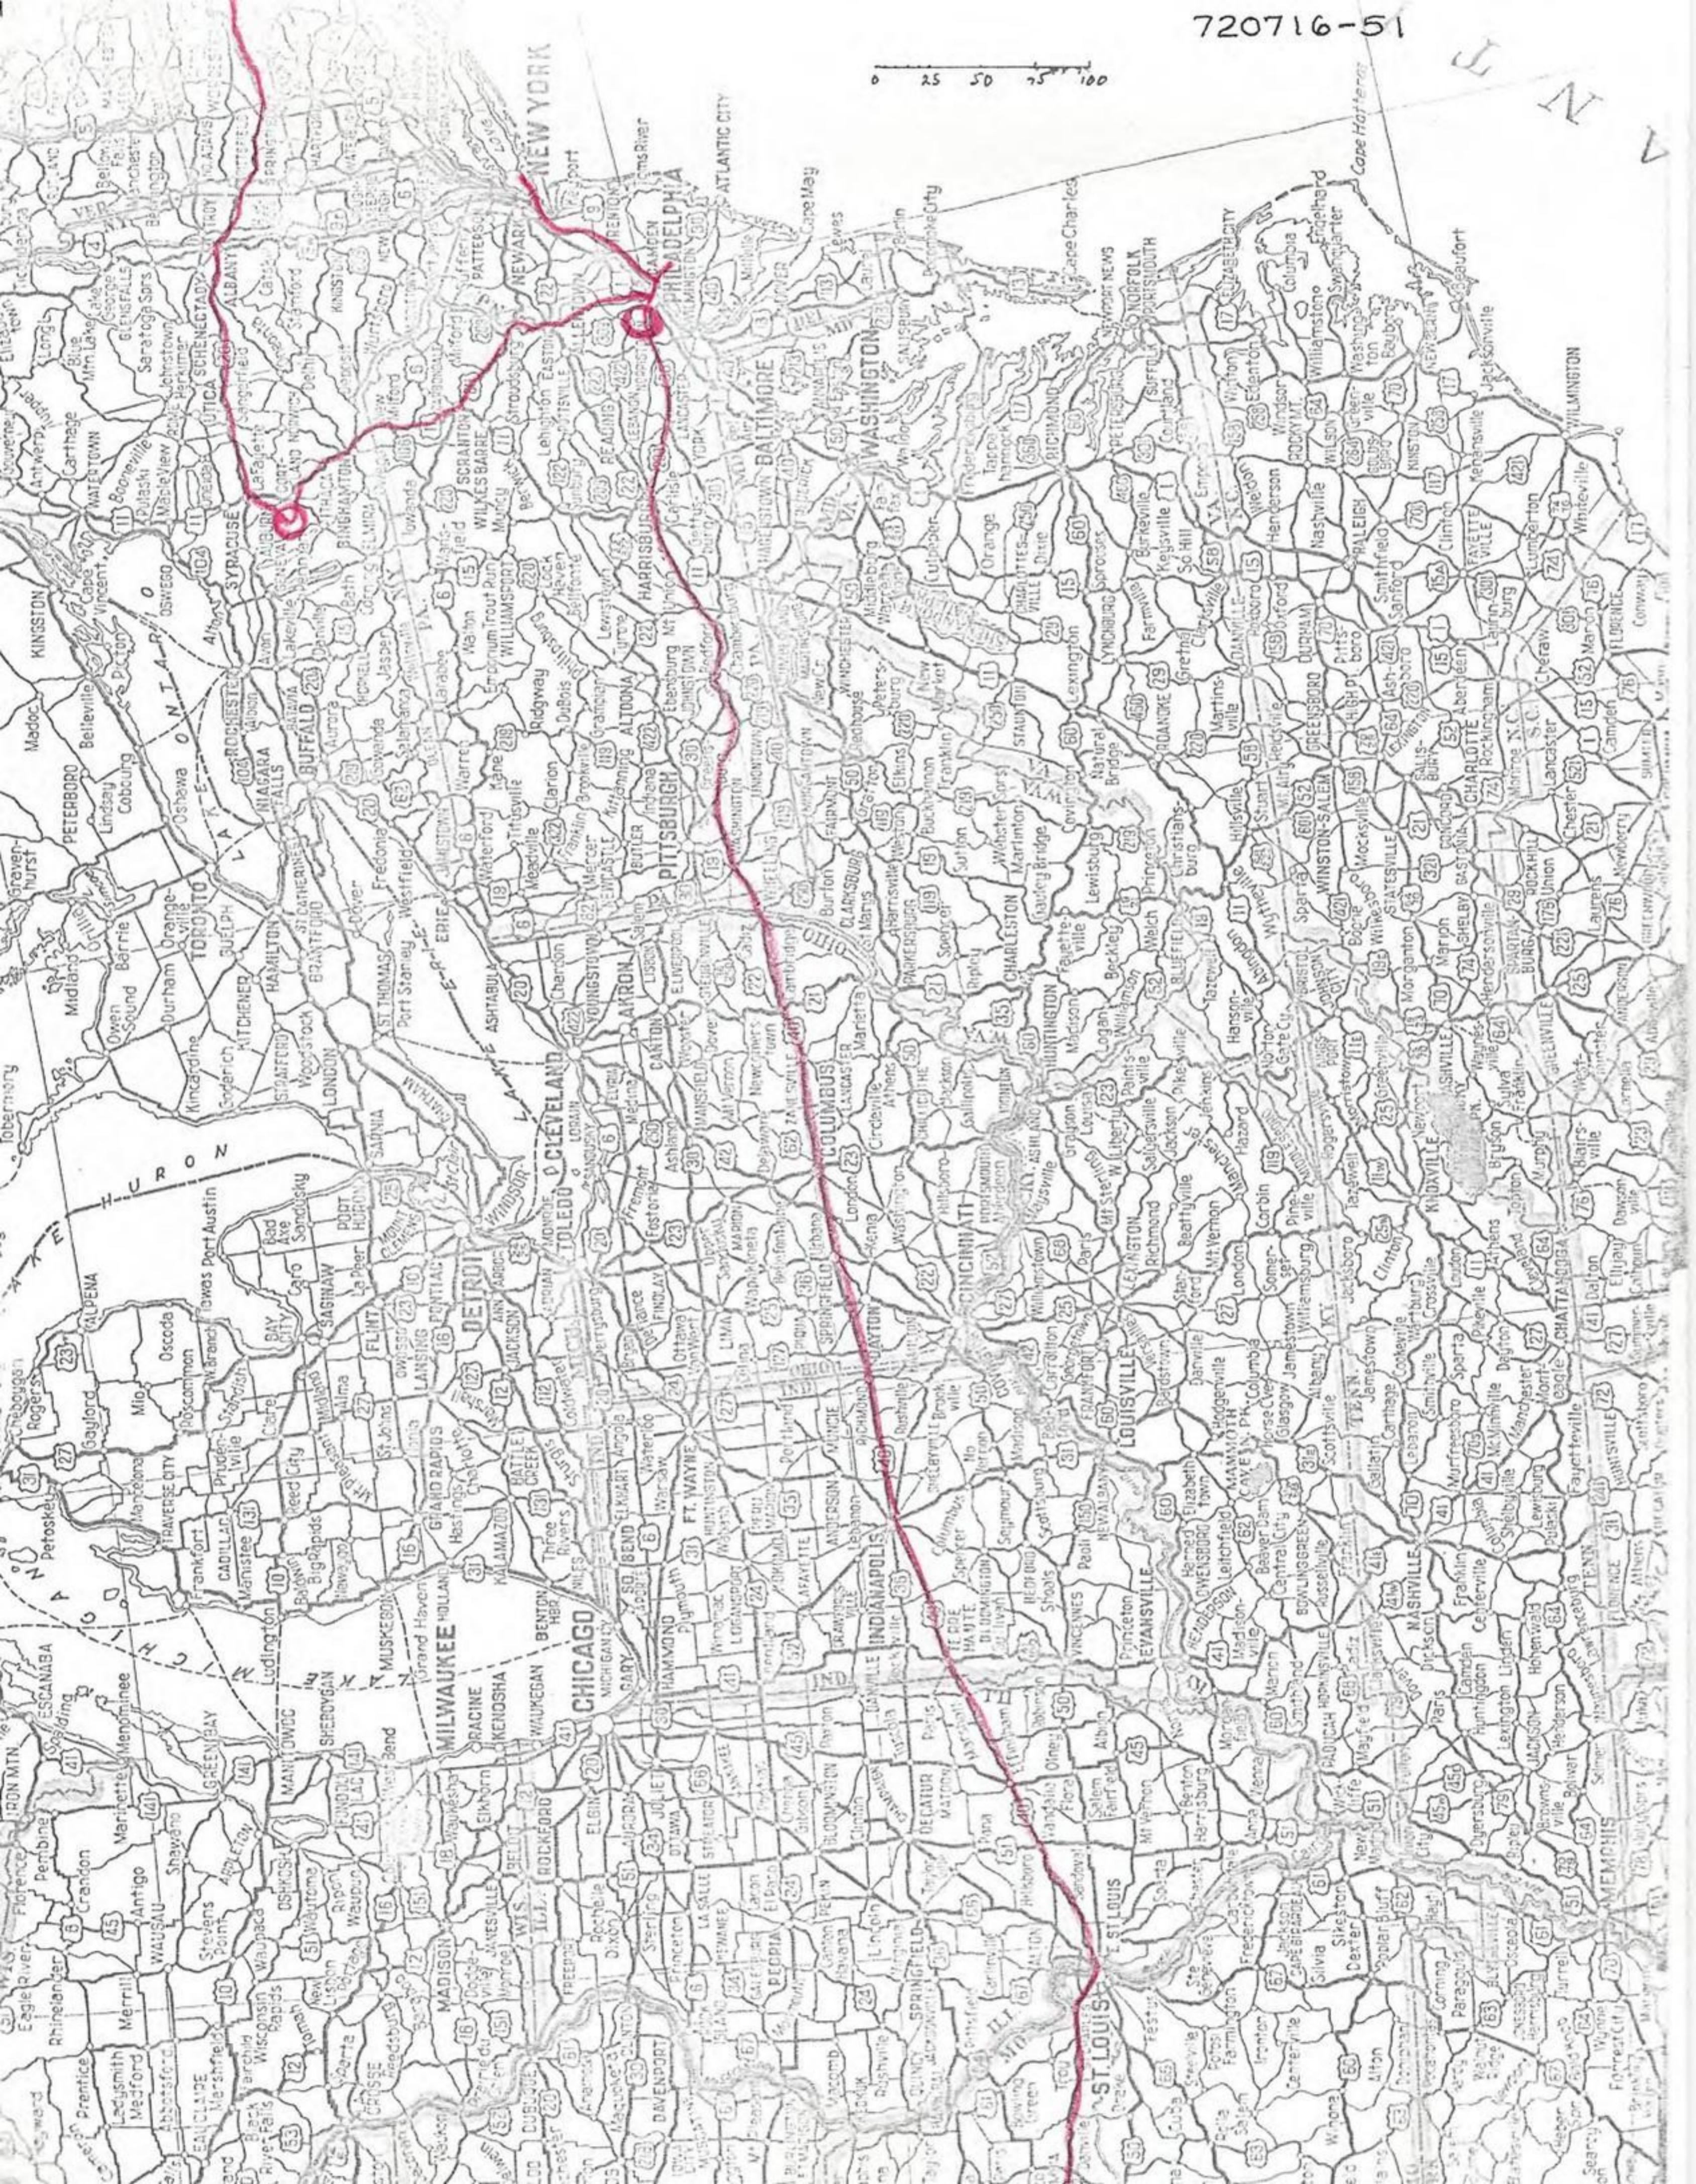

July 16, 1972

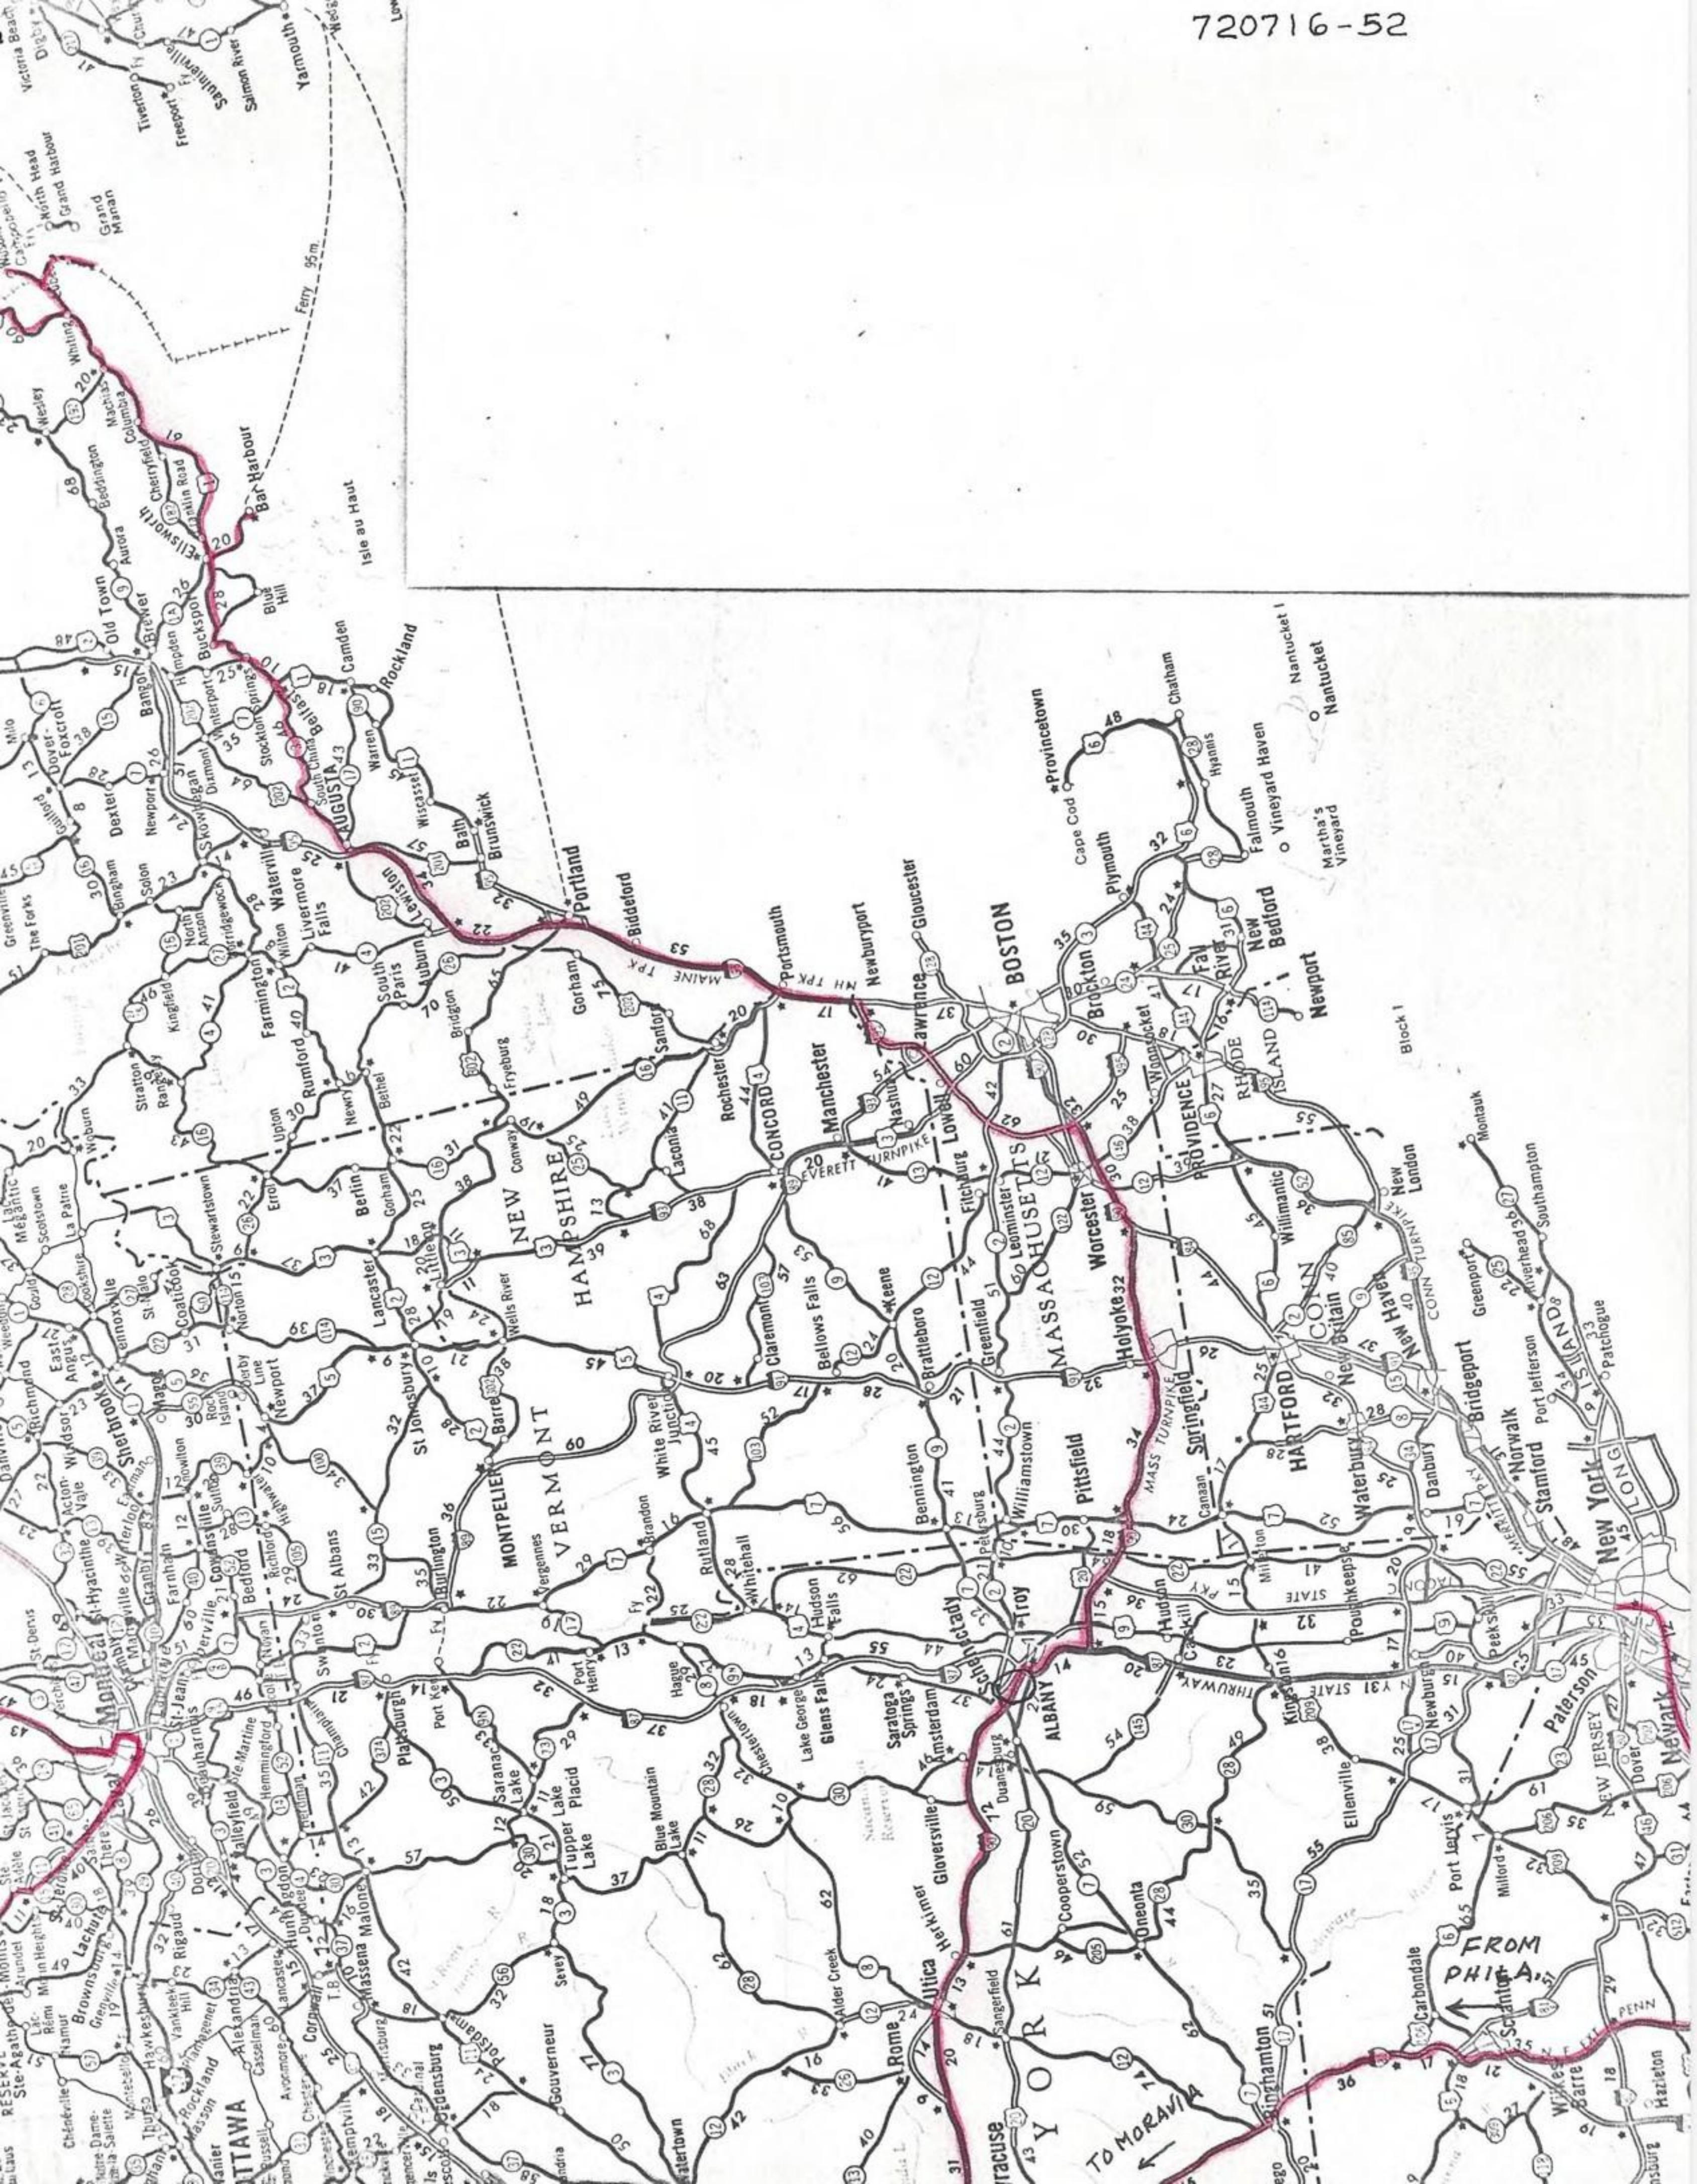

Left 1:00 P.M at mileage 52630. Interstate 70 route.
Birds between Lawrence & Kansas City on highway 32 are;
dickcissel, meadowlark, mourning dove, English sparrow,
grackle, barn swallow, redwing blackbird, bluejay,
starling in order of first observed. Beyond Kansas City
the birdlife was considerably fewer in number and
in addition to above were red-headed woodpecker, ^{Mockingbird, Crows,} yellow-
billed cuckoo and redbellied woodpecker. The first raptor,
a red-tail was observed at 52758 which proved to be the
only one observed today. At 52763, near a clear water river
was a road kill marmot of adult size. 52768 Pilat
Grove. 52770 first turkey vulture. At 52824 near Lake
Calwood in extensive forested area (mainly oaks) and first
such extensive forest, noted 10 turkey vultures in one group.
no other turkey vultures beyond. From Lawrence to
about middle of Missouri the forests are sparse and appear
to be intermediate between prairie and true forests of
eastern Missouri. The western half of Missouri is hilly while
the eastern half flat with, as stated above, forested with
oaks and savannas. Continued to Placerville and arrived
at 52952 at 9:15 P.M covering 322 miles since 1:00 P.M at
Lawrence. Gas consumption approx 10 miles per gallon.

A

Pocahontas, Illinois

July 17, 1972 (Monday)

Left 7:00 A.M. at mileage 52952. Fog, rain and thunder in area, visibility 3/10 mile. 52960 raccoon road kill associated with vegetated pond near side of road. Grackles are most commonly seen in river valley and in an unusual situation are nearly 100 per hect flying south, even on the uplands. Fog increasing as we travel east. 52984 redtail hawk in tree although raining. The fog bank increased to maximum and then decreased to thin layer with indication of sun at which point it rain very hard after which the road beyond was dry, but fog maintained with visibility approx 1/2 mile. Wind from south. This highway has created many barrow pits but there are no ducks 52998. visibility approx 2 miles. Grackles moving south and mainly as individuals or small groups. 53006 Little Wabash River 53023 fog increasing to 2/10 mile. No gopher diggings in road cuts. 53057 leaving flat uplands and entering flat valleys and hills. 53069. 8 State Line of Indiana at 9:15 53079. Wabash River and is about same size as Kossuth River. 53082 first sparrow hawk since Lawrence. Strip mining planted to conifers and are doing good. 53104 Dalleys & ridges like marine estuaries. 53119 2 bald eagles?.

53123 first saprophyte in trees. Temp at noon under cloudy skies 73°F. 53218 sparrow hawk. 53269 marmot at side of road with heavy traffic 10' away. Creeks with vegetation on sandbars and at edge of creeks. 53373 forests now broadleaf and fewer oaks than to west and are taking on a decided new character, one tree a white barked one. Salt Fork Lake at 4:25 near road turnoff to marina (state Park), 3 marmots. Approx 15 small Cottontail rabbits feeding on side of road shoulder. Camped at Salt ~~Lake~~ Fork Lake at 53428 (at first contact of road with lake (on way to headquarters)), after having driven to camping grounds & return. Birds in area on S side of road in area of isolated lakes are: song sparrow, yellow-throated chat, crow, peewee, house wren, thrush (call up & then down), eastern kingbird chased 2 cedar wrens from dead tree in lake, barn swallow, goldfinch, titmouse, chipping sparrow, pied-billed grebe, yellow ^{shotted} flicker, bobwhite.

Salt Fork Lake State Park, Ohio

July 18, 1972.

Morning overcast and hazy. Temp at 6:30 A.M. 72°F. Left camp at 7:40, mileage 53428. Birds in area along road are: crow, cardinal, barn swallow, redwing, starling, purple martin, robin. Marmot road kill. Crobs about 1 per mile. No evidence of commercial farming, slopes used mainly for grazing. Corn in small patches sometimes grown. Open or cleared slopes growing back to trees. Crown vetch on road cut and in blossom. Some flocks of redwings. 53471 St. Clairesville and country less deeply incised than has been the case before. 53437 sparrow hawk. Canyons now 3 times as deep as previous. 8:50 53462 ^{River} wheeling at Ohio Bridge. 53496 Henry's line hovering cross small section of W. Virginia at 9:10. Few grackles along but very few. Birdlife in this area is minimal compared to Kansas. 53515 marmot road kill. 53516 marmot road kill. 53521 marsh hawk being chased by redwing. 53526 marmot road kill. 53549 Yukon at 10:15. Starling most common bird along turnpike. Crow also comfiding. 53590 Somerset at 11:10. Left at 12 o'clock. In the ridge & valley area the valleys are developed agriculturally; the ridge are untouched and completely clothed in forests. 53671 redtail-like hawk and dark. 53071 Leesburghonah River. Continued east (all time on Pennsylvania turnpike. Country flattens out and roads are straight. Left turnpike at Valley Forge and continued thru park to Phoenixville, thence to Baker Park where we camp. Arrived there at 6:00 P.M. at 53811 mileage having travelled 383 miles today. Found some early American pottery artefacts on gravel bars of the Pickering Creek at camp.

Valley Forge (Baker Park), Penn.

July 19, 1972

Spent the day in Philadelphia and Camden, N.J. Visited W. Laurel Hills on Belmont Ave., museum of Art and at Bookbinders Restaurant. Photos 720719-1 to 720719-5 of record of Pictor-maliced grave stones in W. Laurel Hills.

Valley Forge (Baker Park) Penn.

July 20, 1972

Spent the day in New York City visiting Am. Mus. Nat. History, Rockefeller Center etc. Used Amtrak from Philadelphia. No birds enroute.

Valley Forge, Baker Park, Penn.

July 21, 1972

Left for Moravia this A.M. at 8:15AM, mileage 53989 or 178 miles in Philadelphia. At mileage 54123 noted first redtail since last one. Raptors and birds in general are scarce in eastern United States. Forests from Philadelphia to Moravia change from deciduous to deciduous-conifer. Great areas are undisturbed, particularly on ridges. Some streams deeply entrenched. Arrived Moravia at about 4:00 P.M. at mileage 54235. Last storm of about 2 weeks or so ago is claimed to be one of the 100 year cycle. Rained for 2 weeks, attributed to storm coming from ocean onto mainland. All crops poor because of rain.

Moravia, New York

July 22, 1972

attended wedding of Betsy Malseed, in morning and afternoon. From residence of James Malseed collected a Tamias striatus
 SKU 720722-1 ♂ 155-91-35-18-81 gms. skull only.

July 23, 1972

Rained last night for short time. This P.M. hiked approx 1½ miles from reservoir to mouth of canyon of the Fillmore State Park. As a result of heavy rains in the last week, mushroom were growing in unusual profusion, representing several dozens of species. This canyon could be surveyed geologically and biologically with profit. The fracture systems were expressed in the creek floor. Some areas had circular masses of lighter colored shale that might represent colonial formations. The last devastating floods caused soil slippages, entrenched side gullies and displacements of large sheets of shale. Many trees had fallen into creek bed and some log jams had accumulated. A census of this effect on trees should be made, as well as other things, to document the flood waters. There is no record in the area of Moravia of such flooding of creeks & lakes in the history of man habitation there.
 Photo 720723-1 of a red flower (Cardinal red). These forest require humidity & rain.

July 24, 1972

Left Moravia this date. Before leaving measured 4 cottonwood trees in town (Moravia). The largest is 2 block N of the center

of town. It measured 25'9" in circumference at chest height. The other 3 measured were in residential area^s w of town. They measured 19'8", 17'2", 17'3". At Moravia noted white-breasted nuthatch, grackle, redwing, red-eyed vireo, starling, robin, barn swallow. Birds are unusually scarce in this area.

Left Moravia at 1:00 P.M. at mileage 54251 and followed 38A finally reaching highway 20, thence to Thatcher State Park where we camped at Thompsons Lake Camping Area arriving at approx. 6:30 P.M. at mileage 54432. Visited Indian ladder trail (east entrance) to road trail on w end of trail. Noted a sparrow hawk at base of Helderberg ridge at New Salem. I have recorded all observations of raptors since leaving Lawrence and I might say the population is extremely low. The eastern hemlock (*Tsuga canadensis*) is common and terminal cones are numerous. The eastern white pine (*Pinus strobus*) is the dominant pine. There appears to be three species of Juniperus.

Thatcher State Park, New York

July 25, 1972

Drove to Albany and visited the New York State University, the museum and several places of special interest to Annette. Albany Senior High School, three residence of former home of Annette (Lark Street, Chestnut Street, Mercer Street and Delaware Street). Ate at Wellington Hotel. Met George Mells at his place of business. Continued east on Mass. Turnpike 90 to Sturbridge where we camped, arriving at 7:00 P.M. at mileage 54590 or 158 miles today.

Sturbridge, Mass

Left 7:00 A.M. and

July 26, 1972

Drove to Boston, thence N to Gloucester where photo 720726-1 of rocky shore on S side island. Great black-backed gull, Herring and barn swallow in area. Continued around edge of colored peninsula, thence N to New Hampshire, thence to Maine on 95 highway. At Augusta east on 3 to Belfast and then to Ellsworth and thence to Lamoine State Park where we camped. Arrived 7:00 P.M. at 54949 or 359 miles. Forest from strictly deciduous to deciduous-coniferous at about Moine. Crow most common bird on turnpike and usually in groups of 2-5 and feeding off shoulder of road. No hawks. Starling, rock pigeon (domestic), grackle most commonly seen but even these are uncommon.

Some trees at camp area are: jack pine (*Pinus Banksiana*), Tamarack (*Larix laricina*) and aspen (*Populus tremuloides*). Robin, grackle in area.

Lamoine State Park, Maine

July 27, 1972

Left at 8:30 for Bar Harbor. Just outside of Park noted a young raccoon road kill. Continued to Bar Harbor and visited Jackson Memorial Research Lab and thence to top of Cadillac Mountain. Pulled trailer to top. There is a resemblance of alpine on top although only 1500 feet above sea level. *Loche Montanae* in evidence on all slopes, ridge etc. Took the following photos:

720727-1 Annette looking south from near top.
720727-2 To west with large lake. Photo framed with lichen covered rock & dead tree (fir on top)

720727-3 From top to east showing Bar Harbor & islands to E.

720727-4 Bar Harbor below from about 1/2 way up.
white crown sparrow present. Returned to Bar Harbor and ate The Golden Anchor Inn (Lobster at 4:20 ea). At Bar Harbor photos:

720727-5 Bee's Stationery store. Name of man who built store a hundred years ago.

720727-6 Docks at Bar Harbor. Lobster boat and placing lobster in water

720727-7 General shot of harbor.

720727-8 Sailing boat and other row boats surrounding

720727-9 Yacht and Bar Harbor Inn in background. This building probably an old home.

At a sail boat rental the following prices are:

14' Javelin	\$5. per hour
15' Centerboard	\$5. "
15' Keel Sloop	\$6 per hour
16' Bullseye	\$6 " "
18' Keel Sloop	\$6 " "
21' Ventura	\$8 " "
24' " Corsair	\$10 " "
35' Ketch	\$30 " "

The commonest in area and the scarlet tanager in low forests just outside of town in Acadia National Park. The gulls are mainly Herring and ring-billed. Tomtit seen in area as well as a road kill porcupine.

There are differences between this area and say the west Coast:

1. No pollution on beaches even in most concentrated areas of Bar Harbor at fishing wharf. Not a single can or paper or foreign product.
 2. Gulls not in area around habitation. Not one gull at docks. Several flew by at high elevation.
 3. Marine Crafts are small, and few in number.
 4. Stores are not commercialized and are generally distributed, not for instance on one street.
 5. Homes too large for such a far removed area of the country.
 6. See home reconstructed and painted, many homes joined to bar
 7. Driving Considerate & moderate.
 8. Marine waters relatively calm.
 9. Birdlife in general scarce.
 10. Canada has developed its area better than Maine.
- Left at 3:00 P.M. at mileage 54987 for Campobello Island in New Brunswick. Trees are becoming more coniferous and smaller. Crows still most conspicuous and generally distributed along way of any bird, generally in pairs or groups of 3-6. At 54827 5 night hawks. At Sullivan photos 720727-10 of Bar Harbor or Acadia National Park mls. to SW. Arrived at Campobello Island at 7:00 P.M. at 720727-11 of fish traps on W side island. mileage 55100 or 151 miles today. At beach measured tide as

Tide moves up grade at 15' per 30 minutes from low tide to top of last wet sand is 200 feet and then 60' beyond to top of ridge. Water goes over this ridge in storms.

Campobello Provincial Park, New Brunswick, Canada

July 28, 1972

min temp last night 52°F. This A.M. photographed no.

720728-1 daisylike flower on sands near conifers

720728-2 trailer

720728-3 exposing beach to E where above tide transect was made. Rock extensively covered with help. The two black guillemot guillemot fed about 200' out from shore and then to W.

Birds in area are: Canada jay, crow, black guillemot, barn swallow, song sparrow, robin, Herring gull.

Left area and from island photo 720728-4 of fish traps.
Photo 720728-5 of Theodore Roosevelt home (living room looking
out of view window. 720728-6 of front of home. 720728-7
of Roosevelt home and Annette. At Quoddy Head State Park
photo 720728-8 of marine scene. Tide leave & rise rapidly here.
Photo 720728-9 of Annette, fog bell & lighthouse in background
photo 720728-10 of simple marine view, clouds & flowers in fore-
ground to SE. Photo 720728-11 of marine view & beach below.
These above photos approx 12:30. Two common eider fed along
shore about 100' from rocks to very edge of rocks. The
birds were blackish with no identifying mark. Shape of
head characteristic. The pine siskin, song sparrow & pine
siskin in area. Photo 720728-12 of common flowers
representative of arctic bog about 1/2 mile to mile W of the light
house park. Photo 720728-13 of Creaphorn about 2/10 mile
from arctic bog area. Continued on to St. Andrews
and photo 720728-14 of red conglomerate rocks below the
block house. Robin are most common bird and about
1 per 3 miles along road. No raptors. Arrived
Moncton at 8:45 P.M. at 55345 Rained late afternoon
continuously. From Essex to Moncton countryside beautiful
with farms cut into coniferous forests, all on slopes and
valleys. Reminds one of what the Alps might look like without
the mountains. Entire country carved by glaciers. Tonight
drove to Moncton Tidal Bore Park and watched the bore move
up river (12:23 A.M.). It is about 1 1/2 feet high and moves as
a straight line up the river, making a spectacular sight and
considerable noise. Sometimes the sides would surge ahead.
Tide rises after much faster than elsewhere.

Moncton, New Brunswick, Canada

July 29, 1972

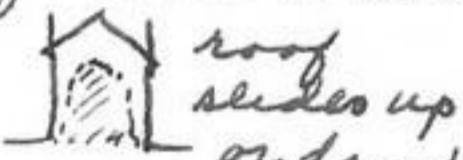

Min temp 57° F Rain & fog. Left at 55370 at noon.
at 55430 at Shinimica noted a sparrow hawk. Sparrow hawk
at 55445 at Pugwash. Tatamagouche at 2:15 P.M. Forests
smaller (height of trees) and open fields domp. Photo 720729-1
of green meadow and marine beyond approx 2 mi E of Tatamagouche.
Continued to N Sydney and got in line for ferry ^{departing} at 1:30 A.M. Have
noticed that crows have increased in numbers to the east and
may be a piling up effect. They still occur most commonly in
singles or pairs to 5 but no flocking.

North Sydney, Nova Scotia, Canada

July 30, 1972

Left for Port aux Basque at 1:30 A.M. Cost of return ^{ticket} \$92.00. Slight swales in sea, bird rare just a few gulls following ship at times. Arrived Port aux Basque which is unique so far having arctic background of few low trees and mainly bare exposures and short tundralike vegetation. Mileage here 55480. Between here and St. George counted 18 single robins (mostly flying across road), 1 crow and 3 small unidentified birds. Photo 720730-1 of marine bay with red berries in foreground at Barachois Brook at 55761. At Stevensville photo 720730-2 of pond algae and buildings in background. At 55771 a kingfisher on line with fish. Corner Brook at 12:30 at 55809. Deer Lake 55862 at 3 P.M. Photo 720730-2 at head of Bonnie Bay with fireweed foreground at 55876. Along coast crows (1-3) about 1 per mile in stunted trees above ocean. Arrived River of Ponds Prov. Park at mileage 55963 at 8:00 P.M. Road along ocean not too impressive, beach with boulders and trees or heath toward mts which are in the far distance. Road terrible and construction has pulverized the seashore environment. Road speed from 10-30 miles per hour.

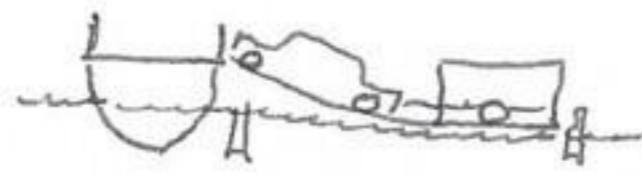

*Hay protected by roof that is moveable
as hay is used*

River of Ponds Prov. Park, Newfoundland.

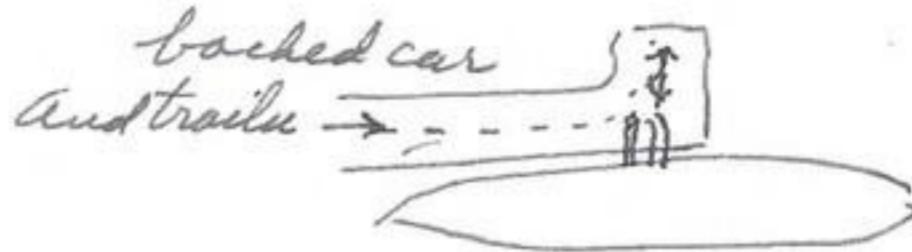

July 31, 1972

Left 9:30 A.M. at 55963. Continued up coast to St. Barbe. min temp last night 50°F. at Castor River at 56024 took photo 720731-1 of village with buttercups & daisy in the foreground. House have screens but windows all open as well as screen. Road from Deer Lake to St Barbe all gravel and although good grade the surface is washboard and with chuck-holes that keep traffic to 15-30 miles per hour. The dust is incredible and hazardous for traffic. Unless one has an objective in going I would not advise use of this road. The country is mainly dwarf coniferous and heath and not impressive. The shoreline is not as dramatic as other areas and is characterized by extensive fields of boulders at low tide and sand into forests. The road construction is mainly along coast from forest routes to less of conifer barrier to between ocean and conifer barrier. This latter condition has will be handicapped by moving sands. The entire route along sea has used adjacent gravels for road construction and the effect on the ecology & aesthetic appearance of the land is disastrous. Moving sands & high water will be

major problems. Robin still most common bird. A few gulls along shoreline. At Saint Barbe put trailer and car on ferry. Car wheel (right rear left plank and back of trailer) droppped on rear bumper. Disconnected trailer and put new inclined ramp for car and with all personnel available pushed car on ferry.

Block and tackle pulled trailer on ship. Car had flat tire on board. Captain and crew complained that government had forgotten the people and facilities in Labrador and realized the loading system for trailers was inadequate. On ship took photos:

720731-2 of Anchor Point to right as we left the Harbor. <sup>for 720731-2a-b.c.
see April 13, 1973</sup>

720731-3 of car + trailer on board.

720731-4 ibid

720731-5 group of passengers, mostly young people from the more western provinces.

720731-6 Annette and Canadian flag

720731-7 Cashes Satchen and sea thru farthale

A large whale?, 20' or so surfaced & blew air. Two others were observed about $\frac{1}{2}$ way across strait. A sooty shearwater flew by. It flew ^{from} about 40' to water surface and weaved back & forth. Its behaviorism is entirely different than gulls. Arrived Blanc Sablon (2 hr trip) and continued to approx. $2\frac{1}{10}$ miles east of the village on the high promontory where we camped, overlooking the marine waters for approx. 200 degrees. Photo 720731-8 to S across heath. This slope is soft to walk on and sinks about 6 inches when walked upon. 720731-9 of trailer with water west of area. Photo 720731-10 to E in over line into Labrador showing several sets of elevated marine terraces. Several thousand gulls were generally distributed in the bay below. Larger aggregates in water near fish activity. 2 raven on beach, and horned larks in foreground. The great black-backed gull, herring gull, ringbilled and black-legged kittiwake? in area. Arctic tern frequently observed.

Set 100 traps this evening, one group $1\frac{3}{10}$ mi W L'Anse au Clair in Labrador and 50 $6\frac{1}{10}$ mi ^{$2\frac{1}{10}$ mi S1} E. Blanc Sablon, Quebec. Trap is almost on the provincial line. The Quebec set was mainly sealed Grumbolt on slope above cliffs while the Labrador was, although similar, was associated with water course from springs. Both sets were completely sealed with vegetation of herbs, conifers etc.

g50 $1\frac{3}{10}$ $8\frac{1}{10}$ mi S

COLLECTING LOCALITIES

AND CAMP SITE

1 2 3 4 5
MILES

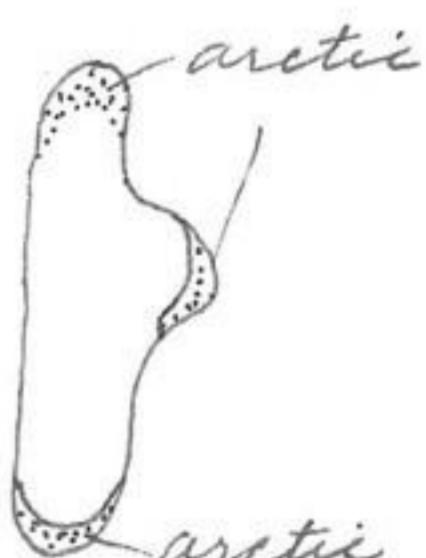

Some of the roads are
in approx. position.

Camp was on high ridge east of Blanc Sablon (1 1/2 mi. W and 1/2 mi S of L'Anse au Clair) with view of water in approx 310°. The area is subarctic and at this point is controlled by wind. It is an interesting observation that areas subjected to wind in several directions (for example, this area, N end of Newfoundland Peninsula, SW end of Newfoundland) are more like the arctic than areas, although farther N in position, which received wind from one direction. A model would be thus,

with arctic conditions in exposed positions and subarctic elsewhere. At the camp in Labrador the surface of a typically developed heath was soft to walk on with feet sinking to 6-8 inches. Walking became labored.

Other areas on exposed ridges were salid with 2 or 3 inches of mosses and lichens. Some areas were developed to rock basins from action

of water and wind. On S exposures rock covered with mosses and lichens. Conifers ranged from matlike surfaces to small trees 4 or 5 feet high and these modified to Krumholz. Some swales and meadows produced typical grass-sedge communities. Water courses were narrow, deep and sometimes covered overhead with mosses and lichens.

minimum temp last night 48°F. This afternoon made trip to Red Bay and return. Recorded a few observations enroute. Left Provincial boundary on road east of Blanc Sablon at mileage 53.7. At L'Anse au Clair mileage 55.5 or 1.8 miles from border. Between L'Anse au Clair and Forteau noted 6 American roughlegged hawks and one snowy owl. The hawks were either flying or sitting on top of telephone poles. The owl was hunting. At Forteau Point took several photographs including:

720801-10 fishing shed

720801-11 cleaning cod. The women made incisions, the middle operator gutted and cut head off body and passed to a fourth member behind him who cut out the tongue. The man on left cut out bones and segregated fish into bins, a pile for drying etc. The livers were in a large barrel and were probably extracted by second operator. The guts were thrown into the water where they accumulated at the bottom some 8-10' deep. The people claim that this material is carried out into the main lake by receding tides. Several foot long trout swam in sight. They claim that trout are everywhere. These fish appeared to be fresh and in good condition. A new resource in the herring is being pursued. Cod sells for 7¢ per lb.

720801-12 Sheds used by fishermen. They seem to be clean and fresh smelling.

720801-12a of fishing docks & sheds

wheel barrows are used to transport fish from outer sheds to the inner shed on shore. I presume that the outer sheds are so placed for ready contact with the small fishing boats which would be handicapped approaching a land based shed and also for cleaning the fish the outer-deeper water accommodates the debris of the unused fish. Control of insects may also be a factor.

Photo 720801-13 of large metal pot - Annette's hand indicates a comparison of size, is heated by wood from beneath and serves for many purpose from boiling fish to washing cloths. These pots are frequently seen associated with fish operations. Photo 720801-14 are children, all but one from the same family. They are shy at first but soon show their intelligence by action and conversation. Most of these children and adults are able to converse in a very intelligent manner. The large child introduced the rest of the children by name and formerly relationship. They seemed to be dressed inadequate for the climate and temperature but seemed healthy. Running noses and insect scars on their faces were common.

Photo 720801-15 is a child that is found in every community. They approach you without hesitation and seem to anticipate your arrival by before anyone else. They are generally subnormal in intelligence but this is compensated by their aggressiveness. They must spend a considerable time out-of-door and their faces show effect of wind, insect bites etc. All people are curious of us and the entire family will be standing in the door way of their homes. The young children are happy and energetic, the teenagers have suffered from proper community contact and proper standard of living. Large families seem to be the usual. The villages show prosperity as far as buildings are concerned but these are probably being financed by loan or government. The villages are generally at sea level and at the mouth of a river. Roads drop abruptly from ^{the} higher plateau.

Continued to bridge at 64.7 at W Saint Modeste. Pinware at 81.8. 720801-15a good development ^{Erythrophorum} and ^{hummocky tundra (crevasses)} to ^{ledges} at 85.0 turned around. Beyond the road follows a wide valley, and is very beautiful in water, trees and distant views. At this point photo 720801-16 of mosses & lichens which have covered the road right-of-way. Snow on sidehill (5 exposure) at 87.1. At W St Modeste photo 720801-17 of fog in rock strewn by. The fog is variable and seems to occur in N-S banks from E to W. Some valleys are open while others are closed in fog. This fog must be common in this area as is indicated by its control on the vegetation. Need more time to investigate this subarctic land and especially the people & their fishing. 720801-18 of L'ameau Clair? with steep approaches & dusty road.

1 mi. W L'Anse au Clair, Labrador, Canada

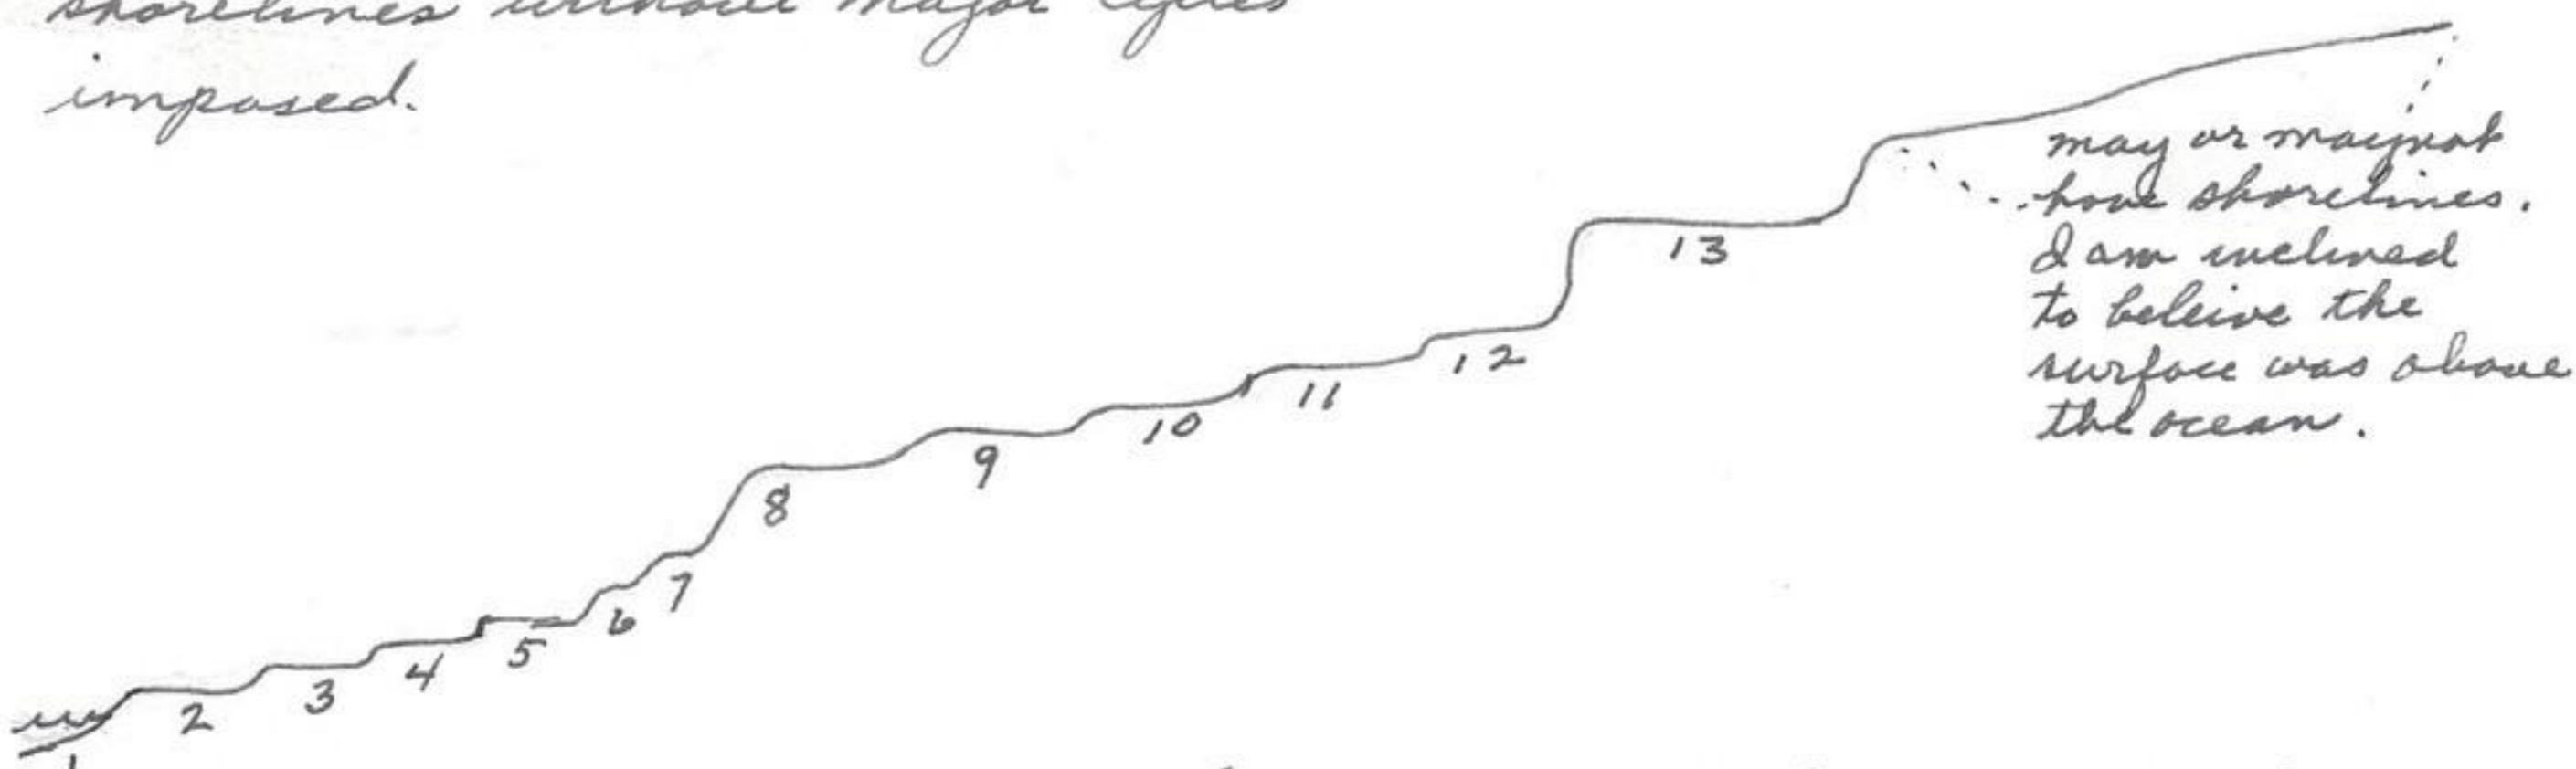

Aug. 2, 1972

min temp. last night 55°F

From 100 traps set in meadow of herbs sealed with sphagnum moss (4-8 inches). The runways were under the cover and trails received 100% overhead protection. Along side of meadow were some grasses with trails but this area did not support mammals. The *zapus* & *mustela* were under dwarf conifers on edge of meadow.

At a point approx. 1 mi w, 1/2 mi S of L'Anse au Clair in a bay area examined the slope for elevated shorelines. From the present shoreline to top of slope where topography is approaching the plateau, noted 13 well developed shorelines. In areas of sheer cliffs there may be additional ones not recorded because of the soiled rock slope. There appears to be a regular periodicity in the successive shorelines without major cycles imposed.

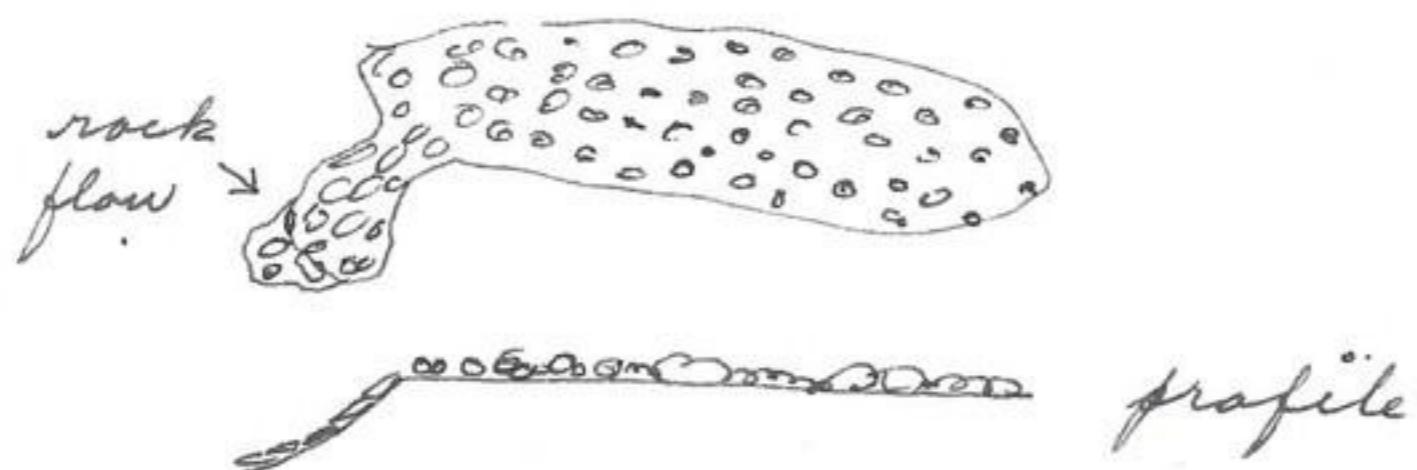

Some resistant layers of rock control the larger intervals as no 8 and 13. It would be of value to survey this area for defining the successional elevation of land since the glaciers left the land masses. It is interesting to speculate on whether climate or irregular uplift produced the shorelines.

Not all rock basin are flat but most of them are so. At
 → direction of wind.

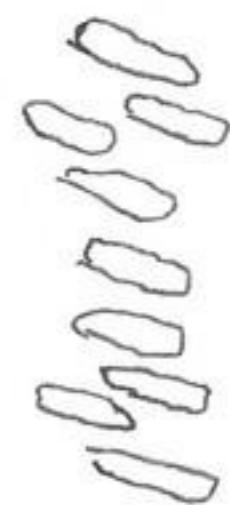

the rocks while the S side is exposed. The orientation is thus:
 The rock flow appears in areal view thus:

At the edges some reservoirs of rocks have flowed down from the sides. The N side is mat vegetation and mat to interrupted tundra with roots

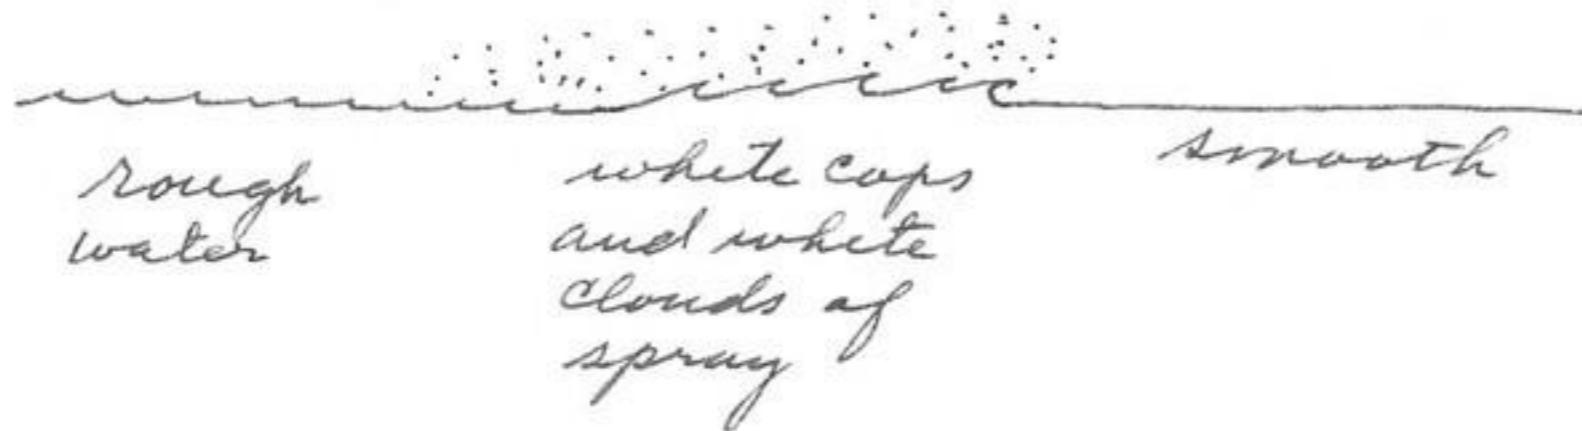

direction of winds while we were in the area.

It is believed that these bare rock areas are produced by a combination or singly by wind on the one hand and water percolating up thru the gravels on the other hand.

One hard wind from the NW blew across the upper slopes and then down on the ocean below. Its advancement across the water was thus:

→ direction of wind.

This afternoon examined the dens of Marmota monax ignava. On flat areas dissociated with rocks the dens are squirrel-like but aperture larger averaging 9 inches in diameter. From this hole, which turns abruptly laterally below, are generally 2 or three trail approaches and at the edge of the hole are well worn. Immediately beyond the hole the trails become inconspicuous beyond the second foot. From patches of Krummholtz or other masses of shrubs, the trails, while currently used are only faintly discernible and narrow; they appear in fact as old unused trails. They are surfaced with matted green vegetation of the same kind as the adjacent vegetation. These trails are first observed as indication of the marmots in the area. The dens or holes are inconspicuous unless the den has been recently

excavated or the hole or den recently cleaned of its debris. Den ^{near} steep rock outcrops were on flatter slopes adjacent to the rocks but with trails leading to the rocks. One was heard but not observed among dense conifer-shrub mass without noticeable trails associated. It call from this place (exact spot) on 3 different occasions I had to pass the area. The call is more squirrellike than marmatlike. The first note (1-3) is a sharp chirp followed by a series of ~~to~~ softer notes (5-8) given in a muttering voice. The call is in the form of the marmat call but sounds more like a Citellus call.

From an area from ocean beach to plateau above collected the following dominant lichens and mosses:

<u>720802-11</u>	720802-36
<u>720802-12</u>	720802-37
<u>720802-13</u>	720802-38
<u>720802-14</u>	720802-39
<u>720802-15</u>	720802-40
<u>720802-16</u>	720802-41
<u>720802-17</u>	720802-42
<u>720802-18</u>	
<u>720802-19</u>	
<u>720802-20</u>	
<u>720802-21</u>	
<u>720802-22</u>	
<u>720802-23</u>	
<u>720802-24</u>	
<u>720802-25</u>	
720802-26	
720802-27	
720802-28	
720802-29	
720802-30	

In the interest of conservation I would suggest that cars and trucks not be driven on the tundra; that excavations for roads, ^{material} not be made on ridges ^{but} adjacent to the roads; that refuse be placed in a land fill; that prevailing trash be cleaned from tundra. There has been severe violation of the above, especially wholesale distribution of pink and refuse. It has developed from generally dumping on tundra ridges to concentrated dump over cliff. Polluting the land & ocean is still practiced in this part of Labrador.

This afternoon checks environs at camp and embayment east of camp. From camp dropped down to one of the old beach platforms and followed east to the first bay to examine again the elevated beaches and shorelines. In this area on beach of present level not 2 whimbrels which seemed concerned of the area, flying back and forth on the beach. They are typical curlew in voice and behaviorism. The shorter bill is diagnostic. 2 spotted sandpipers and the gulls were the only other birds noted on the beach. The robin and white-crowned sparrows were the only birds observed on slopes above the present beach. ^{and the horned larks were on the first plateau on top.} At the point where the ocean water has carved a cliff are many flowing springs from the cliffs. These have produced an unusual array of masses that are freshwater in character but which at times must adjust to the spray of saltwater. The beach is characterized by large round boulders to water edge in some places to small boulders in other places. There are no sandy beaches. The surf rolls the rock landward and then by gravity the boulders roll back following the retreating water. The cliff forming sections of the slope, especially the uppermost one had produced large blocks, some 20' or so in diameter. These slopes of rocks below the cliffs are partly sealed with mosses & lichens. These rocks appear to me to be an unused niche and if one were to predict the kind of animal that might be associated in and among the deep recesses, it would be Clethrionomys. Marmots were observed & heard among or at the edge of the rocky area more at the edge than among the rocks. If I were to look for archaic man in Labrador, I would check these displaced ledge rocks on the uppermost level of the slope. Because most slopes are protected from winds, but excluding areas that hold snow patches, mammals are found commonly. The snow accumulates on S exposures as in the arctic because of the driving winds from the north. The best mammal communities are in the areas listed 6 and 7 on the previous elevated shoreline profile. On to of the ocean facing slope, one of the most characteristic features is the patches of washed rock surrounded by tundra. These patches are not oriented according to the direct of the winds of the period we were there but with their axes more to the NW to W. which would indicate that the damaging winds are from the NW^{to W}, rather than from the N. The center bare areas of small rocks are lacking small fragments and sand and indicate a washing effect from standing water.

Photo 720802-31 of car & trailer at sundown. Temp this evening 50°F. A high wind started at approx. 8:00 P.M. and blew all night, rocking the trailer. In spite of weather, shortwave reception to all parts of the world is incredibly clear and strong. Purchased minerals, Asbestos (720802-32); amber (720802-33), amber (720802-34); native copper (720802-35).

1 1/2 mi W and 1/2 mi S L'Anse au Clair, Labrador
Aug 3, 1972

min. temp 46°F last night. Rained most of night & high wind. Left camp for Blanc Sablon for 10:00 A.M. ferry. Before leaving camp photographed:

- | | | |

| 720803-1 | bare gravels on wind swept ridge (see previous description) | |
| 720803-2 | ibid | 720803- 2a ^{4a} moss and lichen covered rocks as talus below the cliffs. |
| 720803-3 | bay east of camp. | 720803-4b upper slope of bay as slopes grade to plateau. |
| 720803-4 | upper reaches of embayment. | 720803-4c bay to east showing elevated shorelines. |
| 720803-5 | dominant lichen | |
| 720803-6 | dominant moss | |
| 720803-7 | ferry boat with trailer on deck | 720803-4d ibid |
| 720803-8 | ibid | 720803-4e lichen on rock |
| 720803-9 | Annette on board. | 720803-4f spruce forming solid surface mat like a lawn. |
| 720803-10 | end of dock as we pulled out to sea showing barrels of herring. This fish is being exploited for the first time as salmon and cod deprecate in resource. | |
| 720803-11 | Blanc Sablon with remnants of a snow bank for trailer - car shown in background dock for trailer - car. | 720803-11c St Barbe docks |
| 730803-11a | Labrador in distance and typical fog banks. | 720803-11b approaching St Barbe Bay. |
| On return noted 2 sooty shearwaters move across the water at about 2 feet from the surface. As a herring (adult) gull approached them they flew upward for approx. 60' and met the gull in combat the shearwaters being the aggressors. In approx 2 minutes they left the gull and continued on their way. Later another shearwater with white underparts and black back (greater shearwater ?) passed by. One group of 6 northern phalarope fed and rested on the water. There is an eiderlike bird that could be a scoter that was occasionally observed, also common murre & 2 kittiwake and 2 black bellied. Arrived St. Barbe. For best facility at boarding the ferry one should consider the tide level. If too high it is difficult to get car or trailer on board. In any case the trailer has to be hauled on separately from the car. | | |

Continued north to L'Anse au Meadow. At mileage 129 noted an osprey fish along edge of water. It dropped to within 3 feet, hovered a second and then dove into water to come up with a fish. Photo 720803-12 of ice berg in Straits of Belle Isle.

This iceberg has drifted in from the Atlantic and could be lodged on bottom. These ice masses are believed to come from the west coast of Greenland and take up to 3 years to make the journey to the Labrador - Newfoundland Coast. At the north end of Newfoundland the topography flattens and become more arctic in vegetation. Photo 720803-13 of Grignet. At L'Anse au Meadow (meadow made from Medusae which is a jelly fish) found a very exciting setting of the early (1000 years ago) Viking community. It is characterized by meadows of grass, a small flowing stream thru the center of the community, an ocean front, a small harbor and a ridge to west as a NW windbreaker. It is believed that the shoreline 1000 years ago was much high than today, possibly to base of exposed rocks on ridge. Took several photographs:

720803-14 wall forms (of cut slabs of tundra) before excavation showing walls, a door way & an adjacent room.

720803-15 elevation of room with forge. Large rock an anvil.

720803-16 a room

720803-17 small creek running thru site. Should be checked carefully for artefacts.

720803-17a at village to NE

720803-17b small pet grown to moss & lichen at village

720803-18 shoreline, blue flowers and distant view of Viking site

720803-19 fishing wharf. near village to east.

720803-20 " " " " 720803-26 ice berg to E of Viking site.

720803-21 Iceberg in Atlantic 720803-22 wood pile at village E of Viking site. 720803-23 village E of Viking site (arrived St. Anthony. From L'Anse au Meadow to St Anthony (in single or pairs)

Counted 18 ravens, no crows. Drove to light house on south side of bay. Photo 720803-~~24~~^{#27} of steep cliffs just S & W of the light house. Left St. Anthony (the Grenfell hospital most impressive in such a far north setting). On return to St Barbe passed over the extensive boulder field at mileage 270 which represents the approx. center of this unusual field of rock. There is a feeling of recent activity in this area and may represent a recent disappearance of a glacial tongue. It is claimed that the top of the mountain range to S is flat and tundralike. Returned to St Barbe and camp there. Enroute in evening along coast on way to St Barbe photo 720803-28 of pond and wrecked ship at beach.

St. Barbe, Newfoundland, Canada

Aug 4, 1972

Min temp last night 47°F., light rain occasionally.
Left at 8:15 P.M. at 56319

Continued 5 and for 10 miles took complete census of birds: 321 robin, 326 rabin. As has been the case on the trip, all raptures have been recorded. Photo 720804-1 of Point Saunders. Photo 720804-2 of Torrent River. Photo 720804-3 of glacial striae on ocean beach at Hawks Bay. Photo 720804-4 of general view with glaciated rock as flat and extensive as a highway. It is remarkable that the striae have been so well preserved on an eroding beach and that the boulders are still in relative position. Most exposed eroded surface another parts of the glaciated country are irregular and of the ^{rough} ~~massive~~ type, with smooth surfaces on the glacial side of ice advancement and the quarried side on the lee side of the outcrop. These beach surfaces are absolutely flat and of extensive surface area, more so than I have ever seen elsewhere. It may be that they were formed and controlled by a particular water level, much on the same order as today. At mileage 290 observed a pigeon hawk flying low over small conifers. Photo 720804-5 of Portland Creek and canyon. Photo 720804-6 of Gros Pate mountain at Portland Creek. Near here are lobster cabins used during season and shown in Photo 720804-7. At mileage 432 pigeon hawk south of St Paul's outlet. Photo 720804-8 ^{near} of Norris Point. Photo 720804-9 of Norris Point with deep bay, cliffs and docks in foreground. Taken in rain. Photo 720804-10 of small ferry, ~~car~~ trailer. Car will be placed on end of ferry. Photo 720804-11 of car with back end overhanging boat. These ferries are just not equipped to handle modern trailer car combinations. Photo 720804-12 of ferry at Woody Point, fjord beyond. Photo 720804-14 of Annette and steep cliffs taken crossing on ferry. It is my estimation that this area is the most beautiful area observed so far in Newfoundland with its fjords and bold topography. In face of the rough country, the villages and fields are peaceful in appearance. I would recommend this route rather than the new highway that bypassed this area.

The lombardy poplar trees are unusual for this part of the country. Left Woody Point and at 508 mileage, (late afternoon) noted a ^{photo 720804-15 just beyond.} mustela erminea start across the road approx. 150' ahead. At about the middle of the road a second weasel came in from the opposite side of the road and there came in contact with the first one, not in physical combat but with keen concern for each other. As the car approached they both left together in the direction of the second pursuer. Continued to Deer Lake, arriving 8:00 P.M. at mileage 522. The road from Deer Lake to N end Great Peninsula (L'Anseau meadow) is of standard construction and base but the surface is wash-board

and deeply pitted to the extent that at 30 miles an hr one could rupture all four tires. Grading of surface gravels is helpful but this does not eliminate the dust which is unbelievable and at times hazardous. Rocks break trailer windows and completely remove paint on basal part of trailer frame. Dust was in effect on way up but rain was problem on way back, handicapping travel, however, in areas of construction where new soils were rutted and in places ^{progress was} almost impossible. On the whole I would recommend this road which can be travelled conveniently with trailer but keeping in mind that in places one has to travel at 10 miles per hour because of the surface of road and in dry condition the dust is solid! Camped at 56535 beyond Deer Lake.

15 mi. S Deer Lake, Newfoundland, Canada

Aug 6, 1972

Left 9:00 A.M. at Pasadena the S end of Deer Lake was completely filled with logs averaging $3\frac{1}{2}' \times 6"$ in diameter. Several areas of lakes and rivers have been completely utilized by the pulp industry. Log at pulp site are sometimes 150 or so feet high and cover, at the base, a city block. All thru the maritime provinces one sees stacks of these logs along the side of the roads. The native original timber is gone, in some places the second growth has already been harvested and now they are exhausting the second, third and fourth growth! There must be some resource that can be maintained & harvested without cutting down the forest. What is happening is equivalent to removing water of a lake instead of using the water to propagate fish and aquatic life. Photo 720806-1 of hillside of lush deciduous & conifer growth. In areas where conifers have been cut the deciduous trees have grown to large size and look like forests of the tropics. All stages of succession are represented in Newfoundland. Arrived Port-aux-Basque at 12:30 at mileage 56690. Took several photos here.

720806-2 Port aux Basque

720806-3 Trailer waiting to be driven on to ferry. A reservation places one before current ticket purchasers. Ferry holds 120 cars.

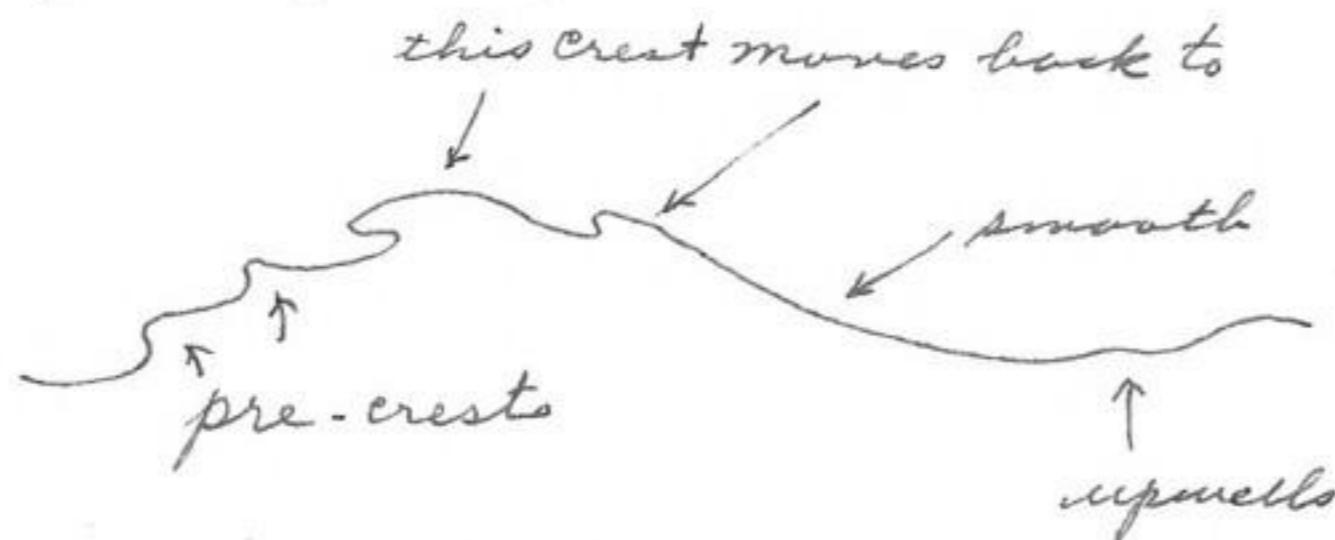

720806-4 Glaciated rock and Port aux Basque in background.

720806-4a 720806-5 Front Ferry (Leif Eriksson) with Port aux Basque in background. 720806-5a Annette on ferry.

St Louis & St Jean

720806-6 Docks near by with Coast Guard ships, & 2 train cars. The background is arctic at Port-aux-Basque but changes gradually to tundra inland. Area E toward Otter Bay is even more arctic in appearance with houses on stilts likediamond islands in Beaufort Straits.

Photo 720806-7 of the ship Lucy Maud Montgomery. This ferry brought us over and holds only 60 cars. The cars are always held to the floor of the ferry with chains whereas the ferry at Woody Point - Norris area hold only loose wooden blocks for keeping cars from shifting. Open seas require solid attachments
 720806-8a ^{gang ready to release rope on dock (3 performed at one time)}
~~720806-8a leaving port of Port of Basque~~ Of the ferries I would recommend the larger ship and be sure to take day trip. The night trip is miserable because of lack of comfortable sleeping accommodation. You sit up or recline in chairs. Some rooms & beds are available by reservation. Before boarding ferry the Dept of Agri vacuumed car & trailer and cleaned all soils from on & under both car & trailer in the interest of the potatoe investigation on Newfoundland. Areas on Newfoundland not visited by us but considered choice in scenic value is Notre Dame Bay with its hundreds of islands. Left Port aux Basque 3:30 P.M. on the Leaf Eriksson. Photo 720806-9 of light house. Photo 720806-10 of open sea and some development of white-caps showing impracticality of navigating open sea with small boats or canoes.

With additional wind the whitecaps are surflike and a single swell will have secondary crests which in turn have tertiary crests.

photo 720806-9 wake action of ferry meeting wave action of sea
 photo 720806-10 wake action of ferry.

photo 720806-11 " " "

photo 720806-12 " " "

photo 720806-13 " " " and Annette
 photo 720806-14 cloud line overhead

Rainbow colors from spray of front of ship did not record on film. Birds on sea were black headed gull, Herring gull and these only near land. No other kind of bird observed. Arrived North Sydney 9:30 P.M. and camped just w of town at mileage 56697.

720806-15 Headwind encounter

North Sidney, Nova Scotia, Canada

Aug 7, 1972

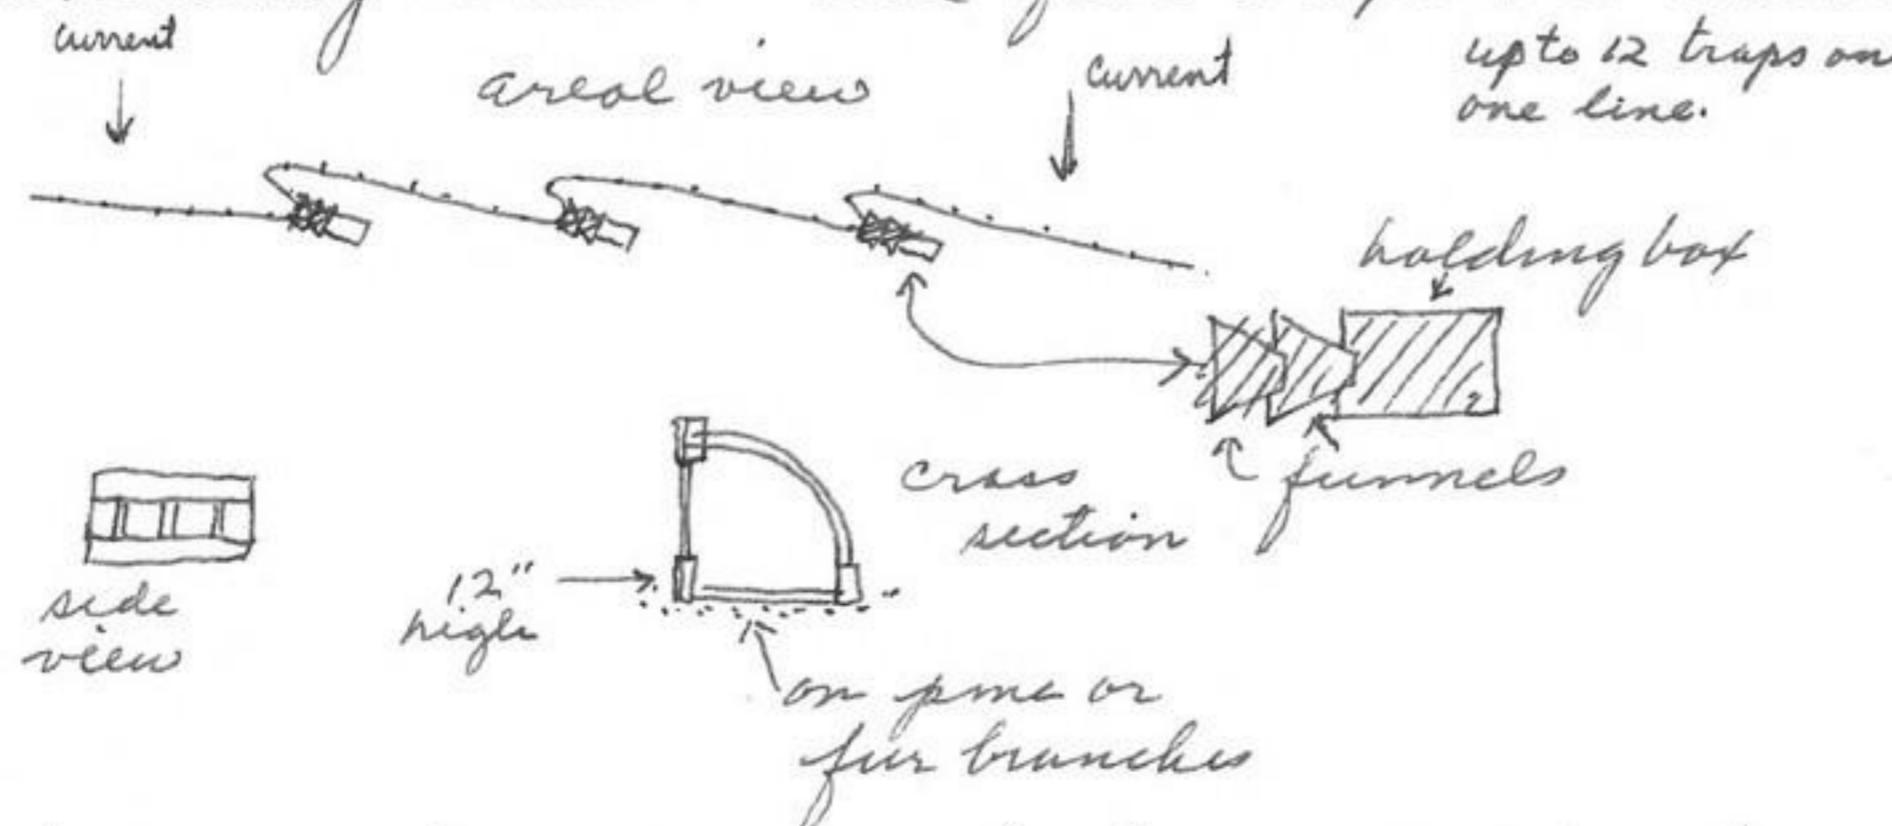

Min temp last night 53°F. In travelling across northern Nova Scotia (see maps) have noted that there is a building up of numbers of crows and raven (fewer in numbers) toward the east end of Nova Scotia both in numbers and size of aggregations. Grackles

are common to eastern terminal of island. Robins, swallows and grackles most common birds. At ~~#~~ 12 miles west of N. Sidney observed one redtail and 2 kingfishers. At Whyecomagh noted a striped skunk and porcupine road kill within 50'. The porcupine is the most common and generally distributed of the road kills with the striped skunk a close second. Neither of these species or other kinds of mammals are common. At Truro did laundry and serviced car and at 2:20 P.M. left at mileage 56887. ^{was evening} 5, grosbeaks fed along side of road. Camped at end of abandoned road that ran into lake at 57137 below Kingsclear near Bruno. Made 251 miles today. Today observed 13 porcupine roadkills which were generally distributed. Both crows and ravens were along road right-of-way. The crows invariably left on approach of car while the raven most frequently remained. The raven can be told from crows by the accentuated wobble in walking. 2 crow road kills today.

N of Bruno, New Brunswick, Canada

Aug 8, 1972

Min. temp 55°F. Photo 720808-1 of camp with boat pulled on dry dock on old road. Goldenrod in foreground. Left 8:00 A.M. osprey fished off camp. Country side all along the way is similar to N New York in the fingerlakes region with glacial carved slopes with lakes and conifer-deciduous forests and cleared farmland and old reconstituted houses. ^{at Riviere du Loup first morning dove on bottom (Camp site)} Continued to Pointe provincial park where we camped. This evening proclaimed at low tide n to actual point. Marine biome well defined. Mud flats possible but appear supported by man's influence in area. The semipalmated plover is the most common bird. Feeds like killdeer but flies more like spotted sandpiper with rapid wing beats. Herring gulls, a black-crowned night heron, crows and scoters? were in area. Also some small sandpipers & one larger sandpiper of a solitary habit. The fish traps are numerous

Fisherman trail thru forests to point among almost climat forests.

all trap construction of boards and curved limbs held together by wooden dowel effect & pegs. Bows chinked base. 1 foot rise directed fish to traps unless the fence supported nets at the time they are used

Camp au Poente, Quebec, Canada.

Aug 8, 1972

Prov.

Min temp 55° F. visited City of Quebec. Conversation is in French and English is not understood. all signs are also in French. The city is interesting but historical, ^{old section} area too concentrated and renovation is too late. The newer (not newest) part of city is more interesting and authentic. Of all our trips we would have to get stuck in mud in the very center of this old city, just outside the walled section. A wrecker was called and the main traffic thru the gate was interrupted. The souvenirs are trash. Continued toward Montreal on N side river, following St Lawrence waterway route which passes thru the small villages. Camped near Lanaudiere at mileage 57646 or 234 miles today.

Lanaudiere, Quebec Province, Canada

Aug 9, 1972

Min temp last night 51° F. Visited Montreal Exposition today, main part on island not being used but regular section is still maintained enough to get the general idea of the original and is worthwhile. The China exhibit is outstanding, but as with Russia they both are peddling Communism as their theme. France is strictly modern and is unacceptable. All in all its worth the trip to see. The river was in flood. Continued NW thru city which has an infinity of residential half homes, all about the same size and in juxtaposition & with a specialty of iron work on steps, particularly circular type stairways and on porches. Camped at Val David in campgrounds at mileage 57741. A large pond had overflowed its dike and had eroded the dike down below the level of the pond. The fast water going thru the bottom of the pond had created deep erosional channels in the sedimentation.

Val David, Quebec Province, Canada

Aug 10, 1972

Min. temp 49° F. At mileage 57822 sparrow hawk. 830 marmot road kill at Mt. Laniel. 865 entering La Verendrye Prov. Park. 956 marmot. 073 mileage a photo 720810-1 of pollution from a plant at Rouyn. The smoke expanses as it leaves this area and is traceable for 50 miles. Continued to 13 miles W of Noranda Rouyn where we stayed at a lake in a Provincial Park. Photo 720810-2 of telephoto of sunset from camp. Measured bear track as 3 1/2 inches wide. Adult twice the width. Covered 346 miles today.

13 mi w noranda-Rouyn at junction 59-46 Hwy Quebec, Canada
Aug 11, 1972

min. temp 43°F. Left at 8:30 A.M. at mileage 58087. Birds in area are common tern, family of mallards, killdeer, swamp sparrow, Herring gull, pied-billed grebe, grackles. The grackles are the common camp birds and feed inside the 50 gal. drums for food. There is considerable squabbling on the rim of these drums. They seem to be more dedicated to camp areas than birds in Kansas area. At 58095 striped skunk road kill and 5 evening grosbeaks. At mileage 58098 at Ontario Provincial line. Will keep complete census of birds from here across Province or to W of L'Orlac. Observation will be correlated with mileage. Started at 9:00 A.M. 99 song sparrow. Sky overcast and blue 10% 100 small bird, beaver dam. 101 Virginia town. One travels across Canada but does not see lakes. 103 grackle. Several lakes have been drained. 105 Bear Lake. 109 Larder Lake. 110 robin. 111 sparrow hawk. 115 2 crows. 120 Mud Lake. 121 2 swallows (probably barn). 121 King Kirkland. 123 Gull Lake, small bird. 125 Turkland. 127 robin, crow. 128 crow. 130 Swastika, Chipmunk. 131 skunk road kill (striped). 136 raven. 137 pine siskin. 139 2 crows 141 small bird. 143 raven. 143 now in Arctic water shed. 151 sparrow hawk. 154 sparrow hawk, 2 crows. 155 30 grackles, crow, sp. hawk. 158 robin. 160 6 crow, one eating spatted skunk road kill. 161 sparrow hawk, 2 crow. 164 starling. 168 matheson. 171 2 crows. 172 Turnoff on highway 11, 3 crows. 175 crow, sp. hawk & small bird. 177 crow & 40 starling. 179 small bird. 181 crow. 185 robin. 186 2 Cocobird. 188 Drogosie Falls. 189 crow. 192 Belly? Lake. 193 crow. 196 sp. hawk. 198 sparrow hawk. 199 sparrow hawk. 203 crow. 213 4 swallows & small sparrow. 214 Cochrane. 220 2 starling. 225 40 starling. 226 2 crow, E kingbird, 2 starling. 235 small bird. 248 raven, sparrow hawk, song sparrow. 250 Smooth Rock Falls. 257 crow. 258 50 starling. 260 2 grackles. 261 Strickland. 263 sparrow hawk. 264 sparrow hawk. 265 2 swallows, 8 swallows, 2 starling 267 sparrow hawk, small bird, crow, crow. 268 Sanguier. 8 grackles. 269 Ground Hog River, 6 starling, 2 swallows. 271 sparrow hawk, song sparrow, crow. 273 crow, 2 barn swallows. 274 Moonbeam. 275 3 crows, 2 swallows, 5 starling. 277 sparrow hawk, sparrow hawk. 278 2 crows. 278 2 raven 279 sparrow hawk, sparrow hawk. 281 crow. 282 2 sparrow hawks.

Aug 12, 1972

Tammascurus, chipmunk, 5 Canada jay in area. Also moose and
 bear tracks. Min temp last night 49° F. Will keep complete
 records to Thunder Bay. 58487 Canada jay. 488 small bird.
 492 kingfisher. 493 LMF Ranger Station. 494 Ring-billed gull
 and common tern. at Keogamisis Lake. 495
 McCleod Provincial Park. Prior to this area there has been
 no fall colors but here the yellows are just noticeable but
 uncommon, just a few isolated trees, mostly aspen trees.

496 North Geralton, crow and sparrow hawk. 501 3 crows.
 502 raven. 504 now in Atlantic watershed, small bird, sparrow hawk, 513 Sturgeon River, chipmunk. 514 small bird, Canada jay. 518 small bird. 522 raven. 523 jellisae. 524 crow. 527 chipmunk. 530 60 starling at Tent? Lake road. 534 raven. 542 Canada jay 543 raven. at Beardmore, 58 and 11 junction at 543. 548 2 Canada jays, raven, 551 Shakspear Island area. 551 end of road at Nipigon Lake. (Alexandria?) 2 photos of annette at water edge nos 720812-1 and 720812-2 and 2 marine shots of Nipigon Lake nos 720812-3 and 720812-4. Herring gulls in area as well as robins & crows. Left this area at 11:15 back to main road. At 559 back to highway 11. At 560 the main town of Beardmore. Trees are increasing in autumn color, mainly yellows but occasionally a red. 564 raven. 566 2 crows. 570 Black Sand Provincial Park. 571 2 bluejays, 2 small birds. 579 Royal Windsor road. 580 20 starling & 10 Herring gulls. 581 raven. 584 striped skunk road kill, 30 grackles, bluejay road kill. Red colors are mainly at base of trees. 592 sparrow hawk. 602 Historic Canoe route, gulls, Thamnophis road kill. 603 raven, ducks. 605 5 end Lake Helen. 606 at Transcontinental highway crossing Nipigon River. 8 Grackles in the village. 610 crow. 614 South Red Rock. 629 2 crows. 635 crow. 636 20 grackles & 10 starling. 640 crow. 641 broadshouldered hawk. 642 18 blackbirds sp. 644 crow. 645 sparrow hawk, 3 crow. 647 Sibley Proo. Park. 58657 turnoff on scenic route to Thunder Bay and end of complete census.

Surveys of crows & Sparrow Hawks & raven etc.
across Ontario.

REEL 720812-14

Thunder Bay is not impressive as a town but high mountains to S.E. may be interesting. Photo 720812-¹⁰ of flowers in park in Thunder Bay. Photo 720812-¹⁰ of flowers in park in Thunder Bay, Photo 720812-10 as above but into light. at 58695 sparrow hawk, 699 sparrow hawk. Check Middle Falls and river. Photo 720812-13 and 720812-14 of these falls. These are the kinds of falls that are by-passed by the Grand Portage. Returned and continued to U.S border at 58722. Continued S to Grand Portage where we camped. Travelled 238 miles today. The country from Lake Nipigon to this area is interesting and variable, not like the monotony of the transcontinental flat forested areas of middle and eastern Manitoba. This evening recorded the sounds⁷²⁰⁸¹²⁻¹⁴ of the dances of a pow-wow of Cherokee Indians and others invited from as far as Montana. One group arrived by home made canoe from Wisconsin via Superior Lake. This canoe was basic wood wood and covered with large sections of birch bark and tarred at the seams. I would estimate the length as 30' long. The music was produced by three large drum, each group of operators playing for a particular dance. The one recorded and analyzed was on a drum approx. 40" wide. Six musicians each controlled a drum stick and for the most part played in perfect unison except where the song required variation. It takes well coordinated effect and memorization. One of the men (with a high pitched voice) was the song leader. He felt his whole sole into the rhythm and volume of the song. The women crowded around the drummers and sang while the braves danced around the periphery of the singers.

The area of Grand Portage has considerable historical interest especially the Grand Portage trail which we followed for a half a mile or so. The Fort seems to have been restored too late and the facility is obviously reconstructed and too new.

Grand Portage, Minnesota, U.S.A.
Aug. 13, 1972

Min temp last night 54°F. We were surrounded at camp by 9 camps of Indians. Made trip to Isle Royale and return same day. Left at 10:00 A.M. on Ferry (Passengers only). At Washington Harbor on Isle Royale noted Herring gull, red-breasted merganser, crow, Canada jay, ring-billed gull, chickadee, thrush, song sparrow, chickadee, great blue heron sparrow hawk, moose tracks 7½ inches in length. Did not

observe birds except an occasional gull on trip over to island. At dock made photo 720813-1 and 720813-2 of ships at dock, no 720813-3 on trail S of Harbor. 720813-4 of a white berry on the trail. Photo 720813-5 of sail boat at dock. The trails are spiny of forest debris and do not look as overused as in other national Parks. The shelters I do not approve. Canoeing is interesting but requires long portage on the inland lakes. All in all this island should be an interesting place to hike, especially in the interest of the 15-20 wolves and ^{the} moose on the Isle. I cannot see how these animals can live in natural relationship with each other with the extensive human interference. Certain areas of the island should be held in absolute inviolance for their needs and protection. Left at 3:10. The captain had lived in this area as a boy and had a tremendous truthful knowledge of its history. He pointed out his home on one of the islands. The old resorts and other buildings are gradually been raised to return the area into ^a natural setting for tourists to take over of completely ruin. There were no birds observed on return across the open waters. The captain told of how the eggs and young of the herring gulls had protective value on the nesting grounds. Arrived Grand Portage at 6:15 P.M. Wrote to the captain for early info on the wildlife of the area, especially as it relates to changing conditions. It is surprising to me that the National Parks did not invite the pow-wow to be held inside the fort yards and the building be made available for their use for both housing and eating. A free trip to Isle Royale would have been in order. Left at 7:10 P.M. at mileage 58734.

Camped at mileage 58757 at edge of lake where the waves had eroded a half of the road, no abandoned. This area is 10 mi N of Kondace River. In the evening noted a muskrat on peninsula of rock getting 40' into lake. There was a few blade of grass but otherwise bare and devoid of vegetation. At 4 feet it jumped into surf. About 3 minutes later it crawled out of the water and headed toward long over the bare rocks. As it approached the trees & shrubs I tried to force it to the back on to the rock peninsula. It could not be diverted from going landward. Being windy & cold it was about 50 per cent disabled. It had the alternative of going to the water or around my barrier but it chose to move directly into my position. Protected water among vegetation was on lee side of the trees.

10 mi N Kondance River, Minnesota

Aug 14, 1972

min. temp. 54°F Left 8:00 A.M. 759 Kondance River. At mileage 58776 at Pike Lake Road a lynx was noted crossing the road at a leisure gait some 300' beyond. As we pulled up to the position where it crossed the lynx had moved up the graded slope some 30' from the road where it stood in plain view for at least 20 seconds before it continued up slope to top of cut where it jumped over patches of low shrubs as would a deer in its high jumps. A humming bird (ruby throated) in same area. at 842 a myrtle warbler and black & white warbler. 850 yellow-shafted flicker. Back the raven and crow were in area from main road on Superior Lake to Ely. Road has changed and is losing its character. Ely at 58877. Bought Duluth Park (\$3.00). Arranged for Cessna flight (Pontoon) to see moose. On a 20 or so minute flight (\$10.00) we saw one moose (3:05 P.M.) in a marshy surrounded lake just N of Ely between Ely & Bass Lake. From this plane we could see all lakes in area even into Canadian Lakes. This type of flight is a must. One is impressed with the great amount of forest and marshy-boggy areas outside of the lakes proper. The pilot says they have 30 bears and several wolves on telemetry. Returned to Ely. The ideal trip of limited time would be to fly canoe & pack into distant lake beyond near portages and then be picked up at a later time. Continued S. At 59013 a sparrow hawk. 6 striped road kills since Ely. At 59015 a sparrow hawk. 59044 Red fox rd kill, at Deer wood, 59045 sparrow hawk and first mourning dove on return across Canada. 59082 sparrow hawk. At 59105 first meadowlark. Color of trees begin at Canada-U.S. border. Between Superior Lake and Ely spotty but noticeably showing color change. S of Ely yellow starting & some reds low in understory. In area S of Ely there are more ducks than we have seen elsewhere. Camped at 59117 just E of Grey Eagle on a lake (Bass Lake). 360 miles today.

Bass Lake, Minnesota

Aug 15, 1972

Min temp 64°F, at Iowa border made census of birds and raptures. None was observed to Missouri border. Arrived Lawrence at 10:30 P.M. at mileage 59670 or 7040 mi this vacation.
(See next page)

The following is from tape recorded overlooked at time of recording last day's trip. It supplements the above from the note book. Left Bass Lake with visibility approx $\frac{2}{10}$ of a mile. at ⁵⁹ junction with 71 Sparrow hawk. Mourning doves have increased since first ones observed yesterday. ²⁹ 59131 Saug Center. ^{133 2} Crows. From here to Missouri will keep complete census of crows and sparrow hawks. There are considerably more birds in the ~~prairie~~ prairie area than the Trans-Continental Conference Forest including meadowlarks, ducks, gulls (some Franklin), cowbirds, grackles, bobwhites etc. now in area of kettle lakes. ⁵⁵⁰ Marsh hawk. 156 some large flocks of grackles which ^{500 or so} is new to the landscape. 172 Wilmar. Black terns in lake. 177 Sparrow hawk. 184 Sparrow hawk. 209 Sparrow hawk. 245 Fox squirrel road kill. 293 2 Crows, 296 3 Crows. 407 2 crows at junction 217 and 71. 441 Audubon ^{1 per} 499 first red-headed woodpecker. 517 second redheaded woodpecker. 544 Pickering, Missouri. 552 Maryville, Missouri at 7:25 P.M. 570 first evidence of bog worms; raccoon road kill. Mourning doves across Iowa average ^{1 per} 3 miles and occur as singles or in pairs. 59579 Sovanna. 8:10 sundown. Still no crows in area where they should have increased over the Iowa populations. Cicadas heard for first time in this area and their the call was continuous. End of census. Continued to Leavenworth, thence S to highway 40, thence to Lawrence arriving at 10:30 at mileage 59670 or 7040 miles covered in last month

Lawrence, Douglas Co., Kansas

Sept. 4, 1972

Mary discovered a red bat in home at 402 Yorkshire Dr. It was captured with a butterfly net and prepared as a specimen (Mori's no. 1). The cat alluded to it position in the house and would jump 3 feet into the air in attempting to capture this mammal as it flew around the room. (see feed no 720904-1 James W. Bee. *Lasiurus borealis* 108-45-9-11-8.9 gms, wing spread 312 mm) (♂ testis 6 mm)
 ♂ (testis 6 mm) *Lasiurus borealis*. 108-45-9-11-8.9 gms. wing sp 312 mm

Perry Lake, Jefferson Co., Kansas

Sept 10, 1972

Fished the first 300 feet of base of dam from beginning at east end. Caught 2 green sunfish measuring 15¹/₂ and 130 mm respectively. One bass measured 98 mm. Fished from 11:30 to 12:00 noon. No unusual or aggregate of birds. The Kaw River has been high the last few days. Chimney swifts still in area. Noted a sparrow hawk near home.

Perry Lake, Jefferson Co., Kansas

Sept. 17, 1971

Fished (fly) from gate to east end of dam from approx 25' lakeward to 5' from base of dam. Rock bottom as a continuation of the slope of the dam. 10:00 to 2:00 P.M. Morning 10% in clouds, later 100% clear sky. Temp afternoon 90° F. Wind from SW and about 15-20 M.P.H. and was a handicap in fly fishing. Water level at gate 93¹/₂ feet. Caught the following species- Blue-gill, *Lepomis macrochirus*; green sunfish, *Lepomis cyanellus*; crappie, *Pomoxis* sp. Arranged as caught: (standard length)

Sept 18, 1972

Nights in area in evening. Also chimney swifts.

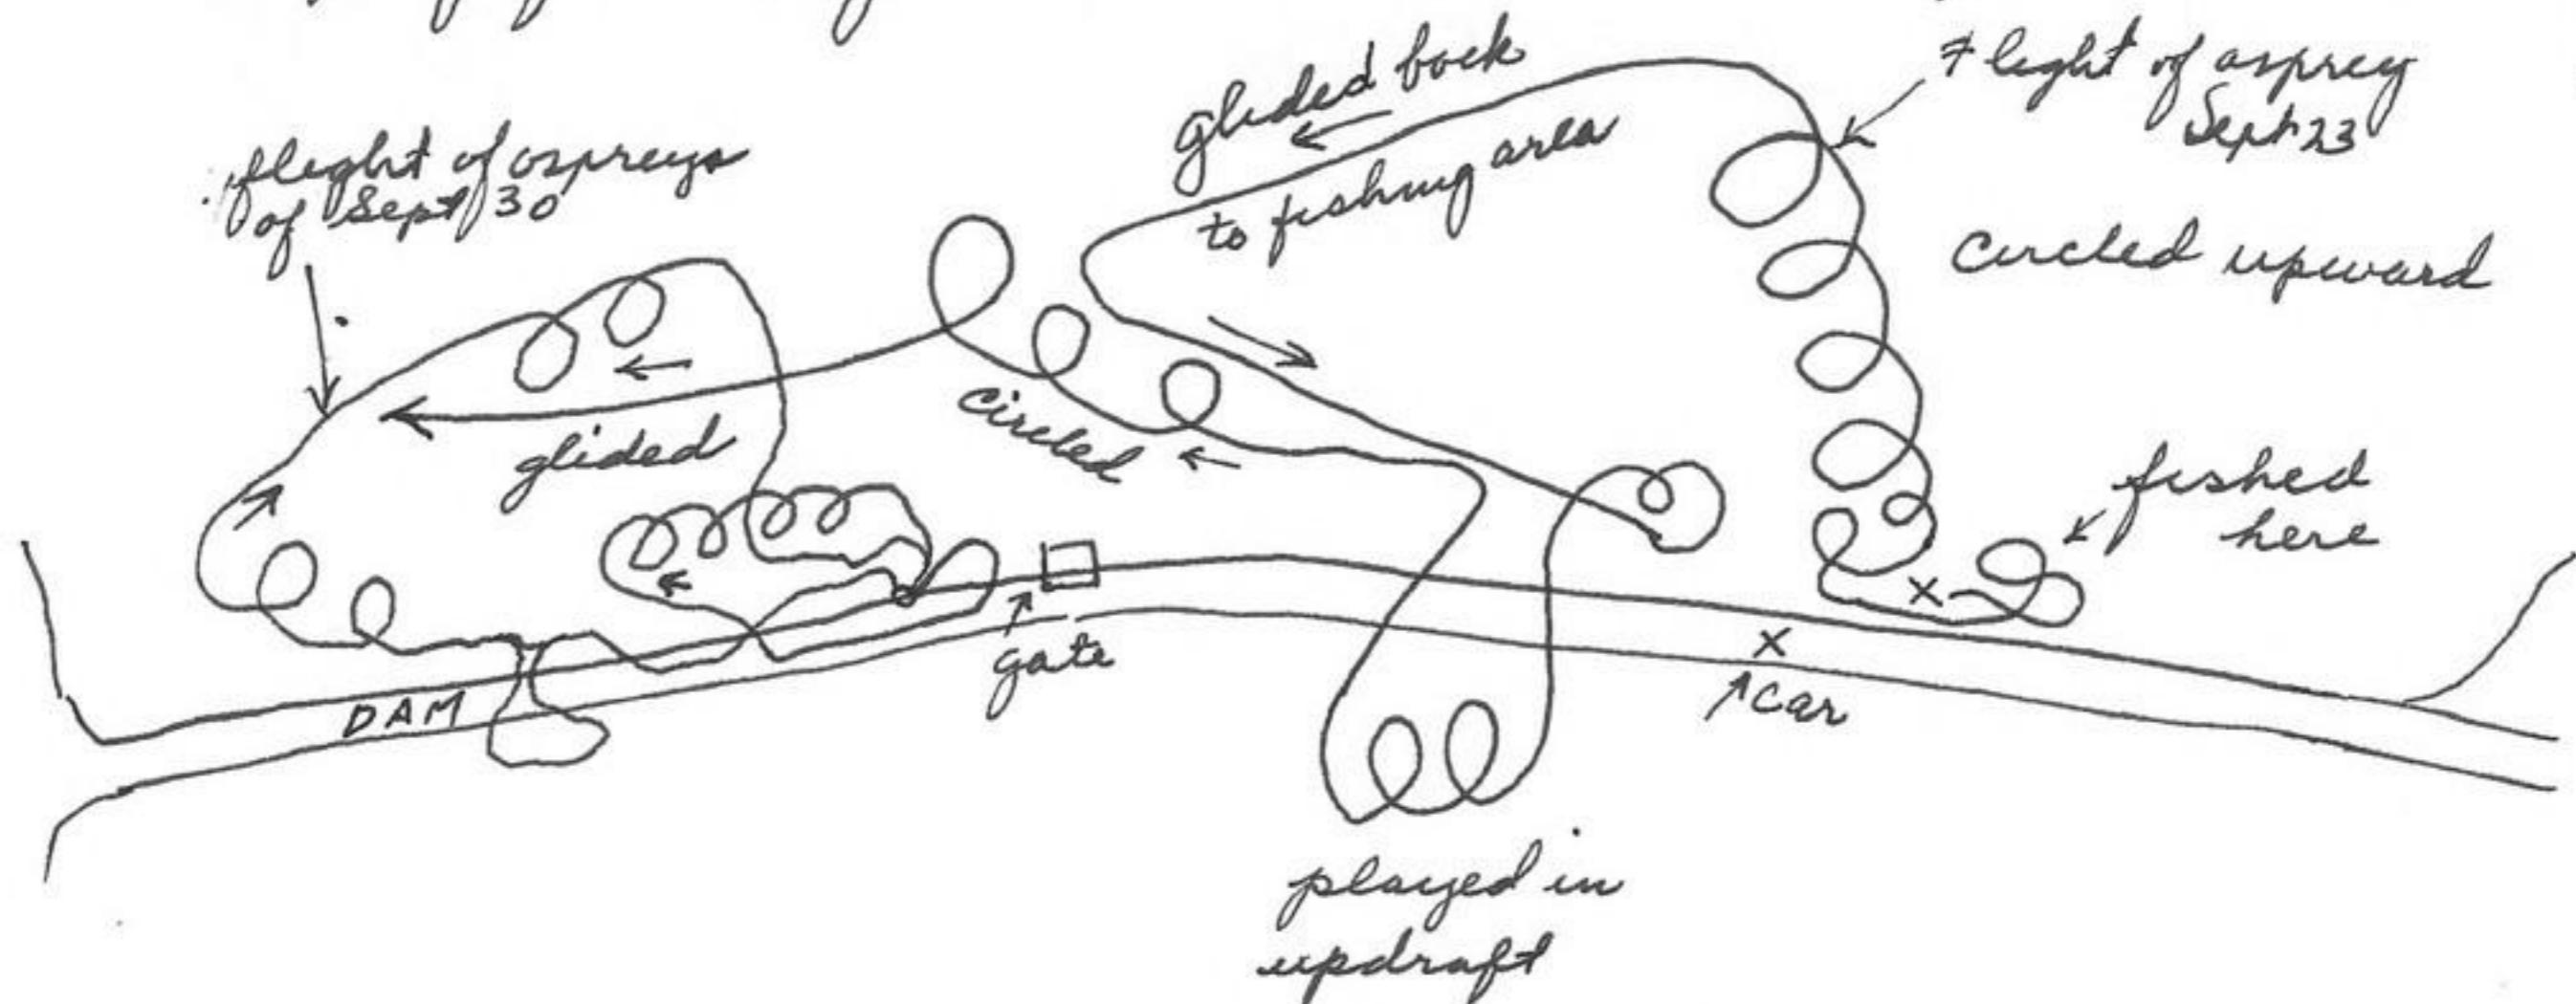

Perry Reservoir, Jefferson Co., Kansas

Sept 23, 1972

Fly fished from west end of dam to outlet gates along shore of dam from 30' out in lake to about 5 feet from shore. Day cloudy, 100%, no sun, fog drifted over lake once, occasional showers, wind about 8-10 mph from south and lee side dam with minimum effect of wind. Always some surface action (of water). Temp about 70° F. Started at 9:50 A.M. and completed fishing at 2:00 P.M. at gate. Water level 92,80 ft. Caught the following fish: Bluegill, Lepomis macrochirus; Green sunfish, Lepomis cyanellus; Lepomis humilis, orange-spotted sunfish; Lepomis megalophas, redear. The gizzard shad, Dorosoma cepedianum and a bull-headlike catfish (4-9" long) were common in shallow water among rock at shore and where they occurred they were generally in groups, especially the shad that worked the upper surfaces of the rocks for algae. The catfish worked with backs out of water. A fly placed in the center of their activity did not stimulate these species to accept the artificial line. The following fish were caught, in some places more commonly, than elsewhere and are recorded as caught: (no. 10 took fly).

An osprey fed along the shoreline at east end of dam

The osprey hovered several times while fishing and although it dropped down to water did not dive or capture fish, at times it flew by the car as close as 40-50'. Barn swallows, approx 150 all told fed on south side of dam and rested on pavement on top of the dam. 2 crows fed on west side of lake. Did not see or hear ducks or gulls. 2 sparrow hawks were observed to arrive from Perry Reservoir from Lawrence. No unusual bird aggregates. Grackles are forming long lines in Lawrence in evening. The only bird observed along dam in fishing area was one spotted sandpiper (exclusive of an occasional barn swallow). The grackles that are present here in summer are not here now.

Lawrence, Douglas Co., Kansas

Sept. 24, 1972

Netted small sunfish from Peterson Pond. They ranged from $\frac{1}{2}$ inch to 1 inch. One was definitely the green sunfish.

Sept 27

Chimney swifts still in Lawrence area.

1 mi. N, 2 mi. W Lawrence (P.O.), Douglas Co., Kansas

Sept. 28, 1972

Set 50 museum special traps in area in and around a semi-permanent man made pond consisting of short compacted grasses, hillocks of soil now covered with grasses, small willow, super-saturated soil supporting damp-loving plants. Area undergoing succession from clean barren soils to grassland to deciduous shrubs and trees. Highest temp today 80°F. No chiggers in an area that would support mag. numbers. Mosquitos common.

1 mi. N, 2 mi. W Lawrence (P.O.), Douglas Co., Kansas

Sept 29, 1972

Collected the following mammals from traps set last night. Temp. at 7:30 A.M. 45°F, slight rain in air and some wind.

720929-1	<i>Peromyscus leucopus</i>	171-72-22-14-28 gms ♀
720929-2	"	175-82-22-15-25 gms ♂
720929-3	"	186-83-22-16-28 gms ♀ post parturition
720929-4	"	172-74-22-15-26 gms ♂ Testis 12 mm
720929-5	"	175-78-22.5-15-28 gms ♂
720929-6	<i>microtus ochrogaster</i>	150-36-20-12-45 gms ♂ testis 13 mm
720929-7	"	151-32-20-11-49 gms ♀ 1x3 emb 12 mm
720929-8	"	144-33-18-12-45 gms ♂ testis 12 mm

A road-kill *Scurus niger* adjacent to wooded area near pond 720929-13 *Scurus niger*. 470-201-68-32-515 gms ♂

Perry Reservoir, Jefferson Co., Kansas

Sept. 30, 1972

Fly fished from west end of dam at a point where curve begins to the NW. to the outlet gate. Caught the following:

bluegill 108 mm standard length

B 110	G 150
Green sunfish 146	G 110
B 116	G 104
B 123	B 118
B 118	B 109
B 88	B 128
B 115	G 142
G 112	B 103
G 94	B 106
B 110	arrived gate 12:30 P.M.
B 92	
B 109	

Day clear, wind 4 mi per hour, temp approx 68°F. Water level at gates 91.80.

One spotted sandpiper along dam and except osprey, was only bird along dam.

At a point NE of gate about 1/3 way across lake were approx. 2000 American

Coot in a long linear raft formation. No ducks were associated. Two osprey hunted and

nested on the N side of dam (see map of Sept 23, 1972 for flight) These birds were in area from 11:30 to 11:55 A.M. Their movements were synchronized and they generally flew together or nested together. One cormorant observed flying by at 11:35 A.M. A sparrow hawk was on S side of dam.

Lawrence, Douglas Co., Kansas

Oct 5, 1972

Beginning of main color change. Mainly few underdust trees.

Oct 15, 1972

maximum color in native forests and colors there well synchronized. In the city the colors have not been synchronized.

Oct 16, 1972

Three sparrow hawks between 402 Yorkshire & Lake View.

Oct. 25, 1972

just beyond the middle of the month Lawrence had sub-freezing temperatures which was considered a near record for early seasonal freeze. By this date the colors are intensified because of the rain of about a week ago. Many trees are without leaves and the green leaves are curled and greyed from the freeze. This freeze effect is noticeable of the ^{and some} ~~refugee~~ cottonwoods and black willows along the Wakarusa River which are still green but greyish from the freeze and are curled.

15 mi. SW Meade, Meade Co., Kansas

Oct. 30, 1972

Mammalogy class presented me a Dipodomys ordii from above locality and collected on Oct 28, 1972. This specimen is:

721030-1 Dipodomys ordii 260-146-41-12 gms ♀ 2x1 plac. ears.
This specimen was prepared as a museum mount. Three live Dipodomys were placed in one 10 gal aquarium and the reaction was like a chain reaction. Remove 2 and single specimens lived satisfactorily. An Oryzomys was placed in same aquarium and in three days the two species were compatible and on occasions rested together. The Dipo is the aggressor.

Lawrence, Douglas Co., Kansas

Nov 1, 1972

In city the elms are yellow and just beyond maximum. Oaks deep mossy and dormant color. $\frac{1}{4}$ trees bare or with light green color from freeze. Maples just beyond maximum color. This year like last year but colors not as well synchronized. Colors on native hills precede city colors this year by about a week.

Nov. 7, 1972

major color gone and leaves 70° off trees. yellows of elms and maples on leaves lost on trees as result of winds. The frosted leaves remain on trees and are greenish gray. Nov 16, 1972 First ground snow 3". Layer of slush on water in streets like ripples (side walk, top 

Perry Lake, Jefferson Co., Kansas

Nov. 25, 1972

Kept list of birds between Home (402 Yorkshire, Lawrence) and Perry Lake via road that parallels turnpike, thence Lecompton ^{10:30 A.M.} etc. Mockingbird; sparrow hawk, 5 on entire trip; redwings, approx 5,000 in one flock which also included grackles, starling and cowbirds representing about 1% ; yellow-shafted flicker; crow, meadowlark; red-bellied woodpecker; downy woodpecker; cardinal, tree sparrow, slate-colored juncos; at the dam at Perry Lake noted approx. 15,000 mallard ducks. They were in center of lake π of dam formed a rather unusual raft thus: with a long single line of 3-5 birds forming as a circle off the main group. Along north edge of dam counted 38 american golden ducks in small groups of 2-8 and generally distributed along the entire length of the dam. One isolated bufflehead also along dam. These ducks (golden-eye & bufflehead feed out from edge of dam at about 20'. Also associated along dam were 13 horned grebes, feeding in the same areas as the ducks. One group consisted of 6 birds. Eight ring-billed gulls hunted the shoreline and occurred as singles. 2 Coats were noted.

Clinton Lake, Douglas Co., Kansas

Nov. 27, 1972

Base of dam from w side to Wabasso with a shallow layer of sand, nothing beyond to SE contact with side of valley. Most surfaces graded as associated with dam on w side. Trees cleared above dam along river. From the overlook at mileage 78.8 made censuses of birds along newly paved access road to highway 40. at 79.9 marsh hawk. 80.2 13 redwing blackbirds. 81.2 highway 40. No other birds except marshhawk noted. Time 9:00 A.M., sky clear, temp 38, wind approx 10 m.p.h. The newly graded sides of the road, especially near headquarters should be checked for indian artifacts before grown to grass or weeds.

Lakeview, Douglas Co., Kansas

Nov. 27, 1972

18 ♀ and 9 ♂ american mergansers, 1 pied bellied gobe, 1 ringbilled gull and 1 bufflehead on lake.

Clinton Lake, Douglas Co., Kansas

721213-96

Dec. 17, 1972

Annette and I made reconnaissance trip to N end dam site. There were no birds between the overlook and highway 40 on new road.

Dec. 17, 1972

Made census of birds in area of proposed dam site. No birds from highway 40 to overlook. No birds to bridge over Wakarusa (all trees have been removed and ground cover disturbed or graded). From bridge just beyond forks (house & barn have been raised to Collins home on Clinton road noted 1 crow and 2 groups of 4 meadowlarks. From Collins corner to S end of proposed dam noted 35 meadowlarks in groups of 18-7-4-2-4. In fallow field 1/10 mi W of S end dam noted 18 marsh hawks in general area, some hunting near ground level, others flying or circling above. The time was approx 20 minutes before sundown and these birds were collecting for roosting. A sparrow hawk and 2 redtails were also in area. Most of the trees have been cut N of the Clinton road to N side of valley and the lack of trees give one the impression of greater distance to the landscape.

Lawrence, Douglas Co., Kansas

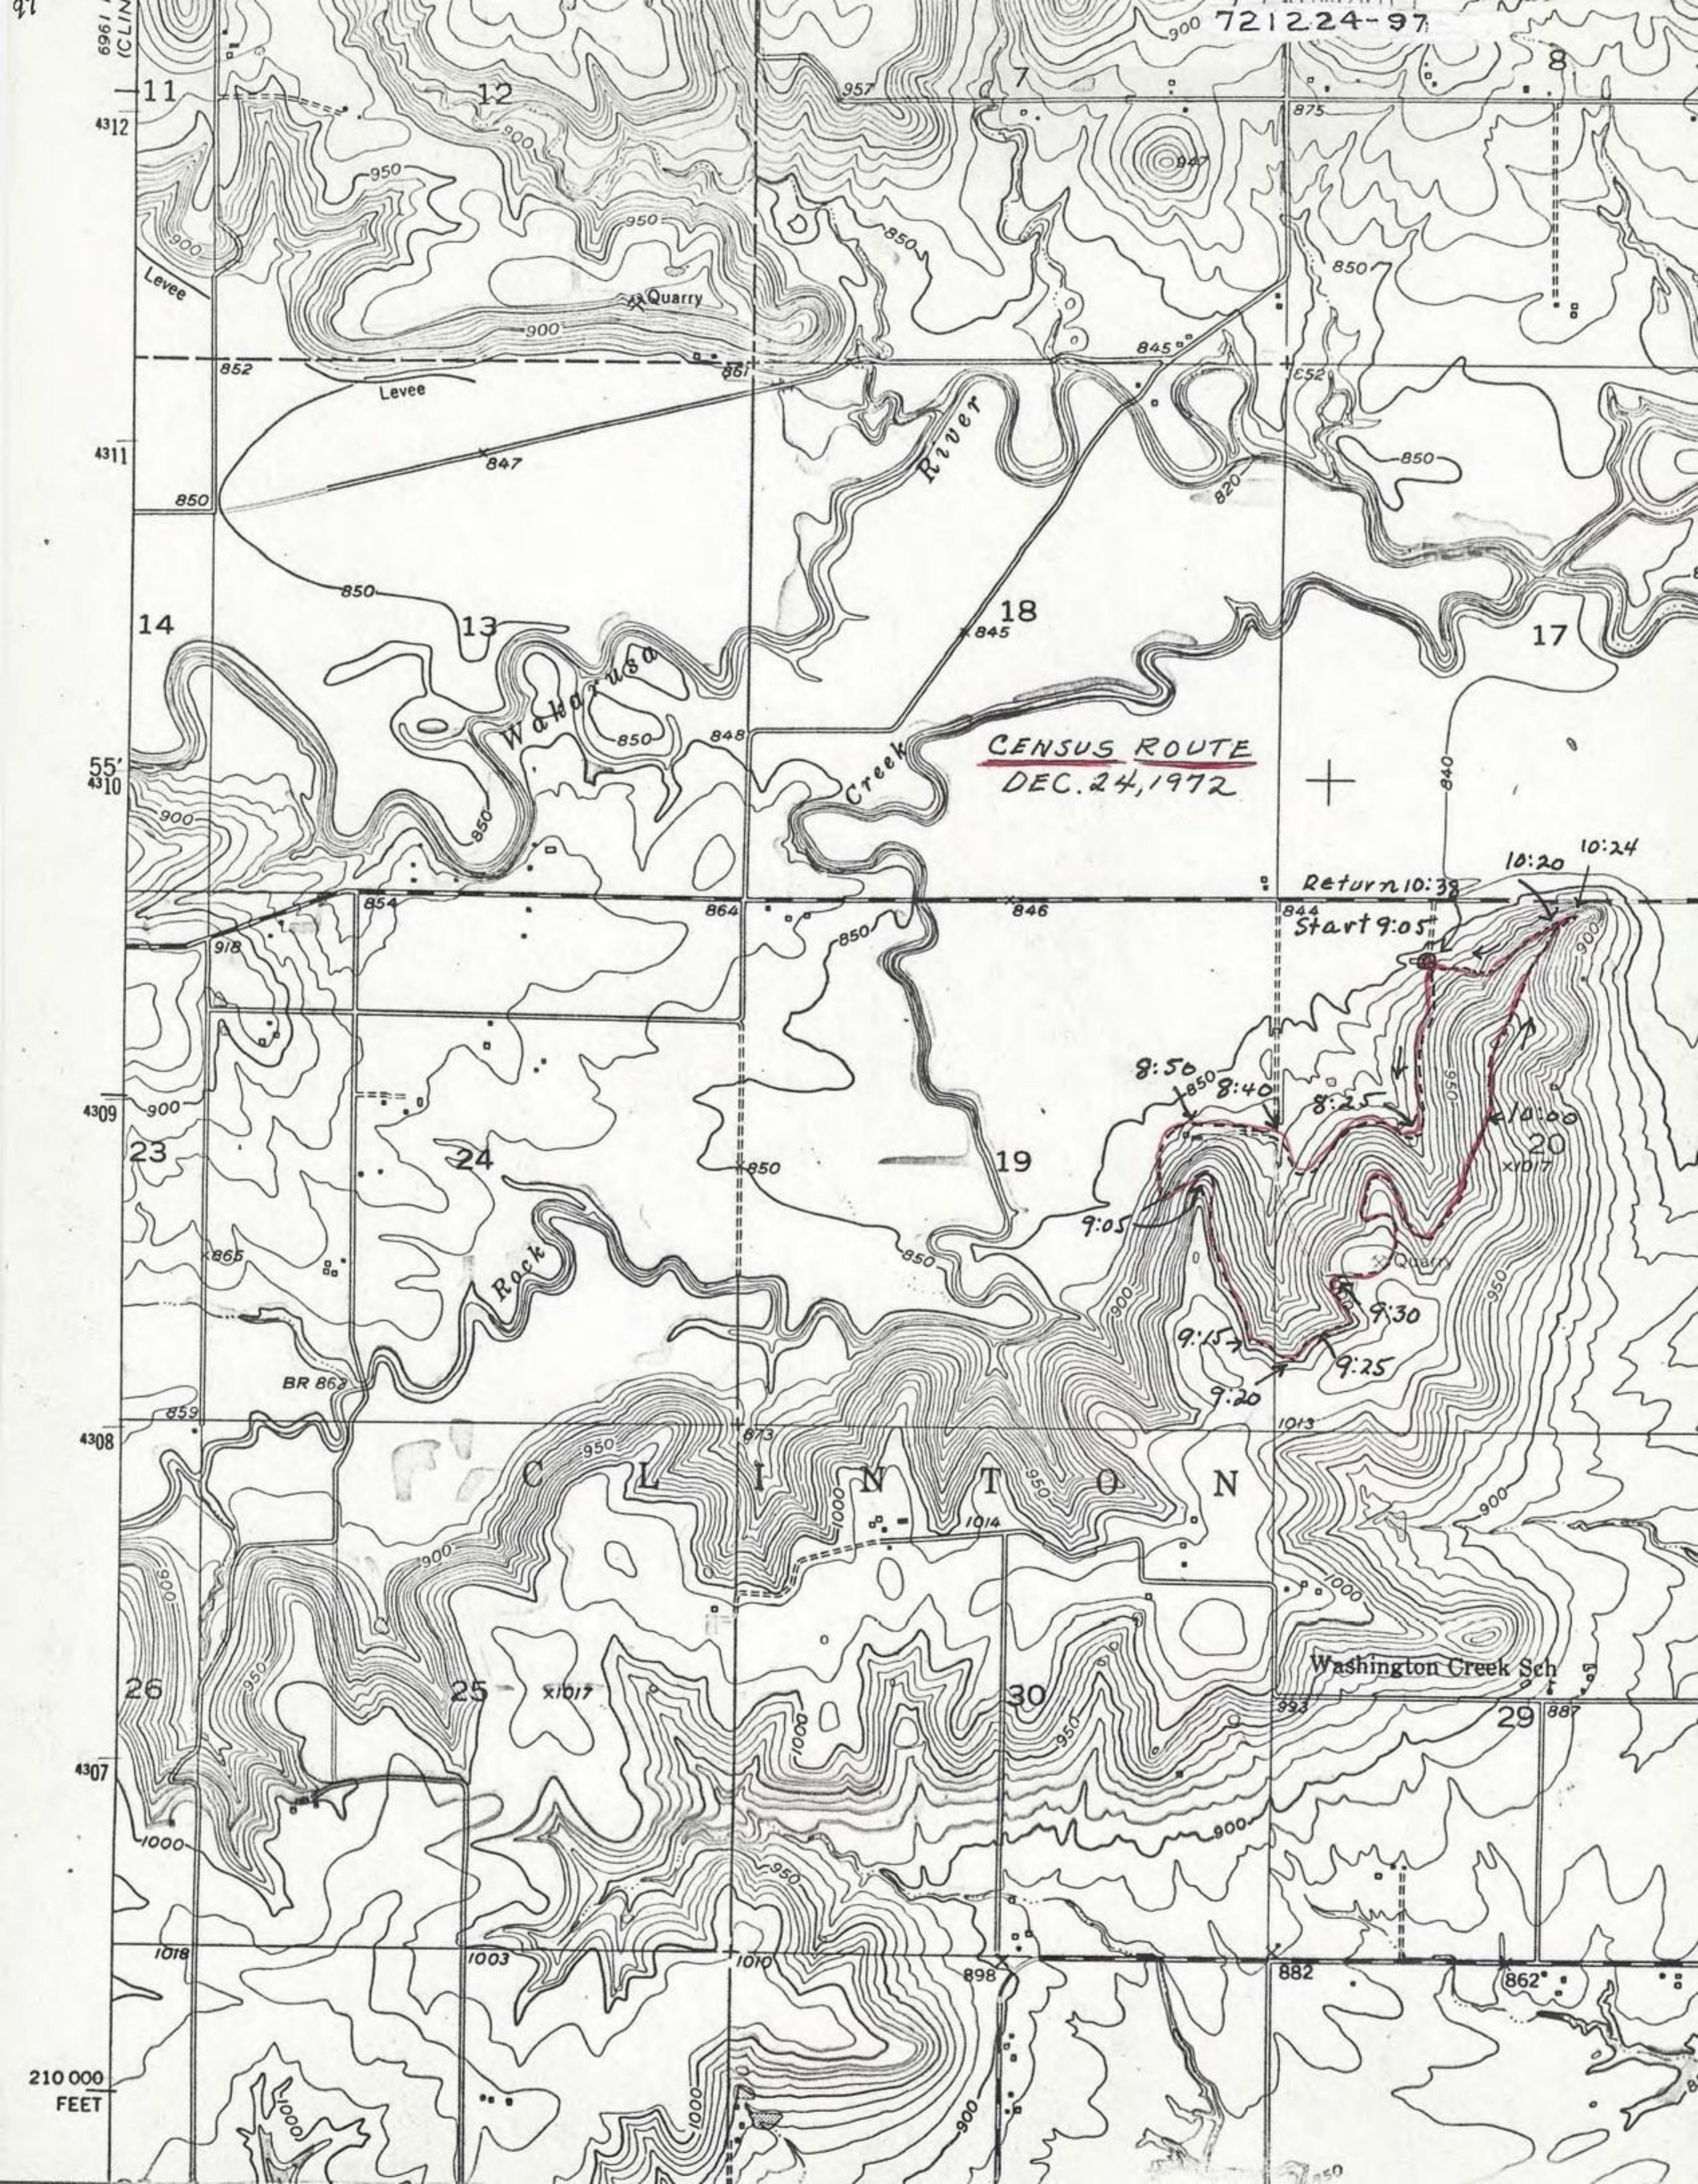

Dec. 18, 1972

Noted 2 redtail hawks systematically hunt a milo field near home. 402 Yorkshire

Clinton Lake, Douglas Co., Kansas

Dec. 24, 1972

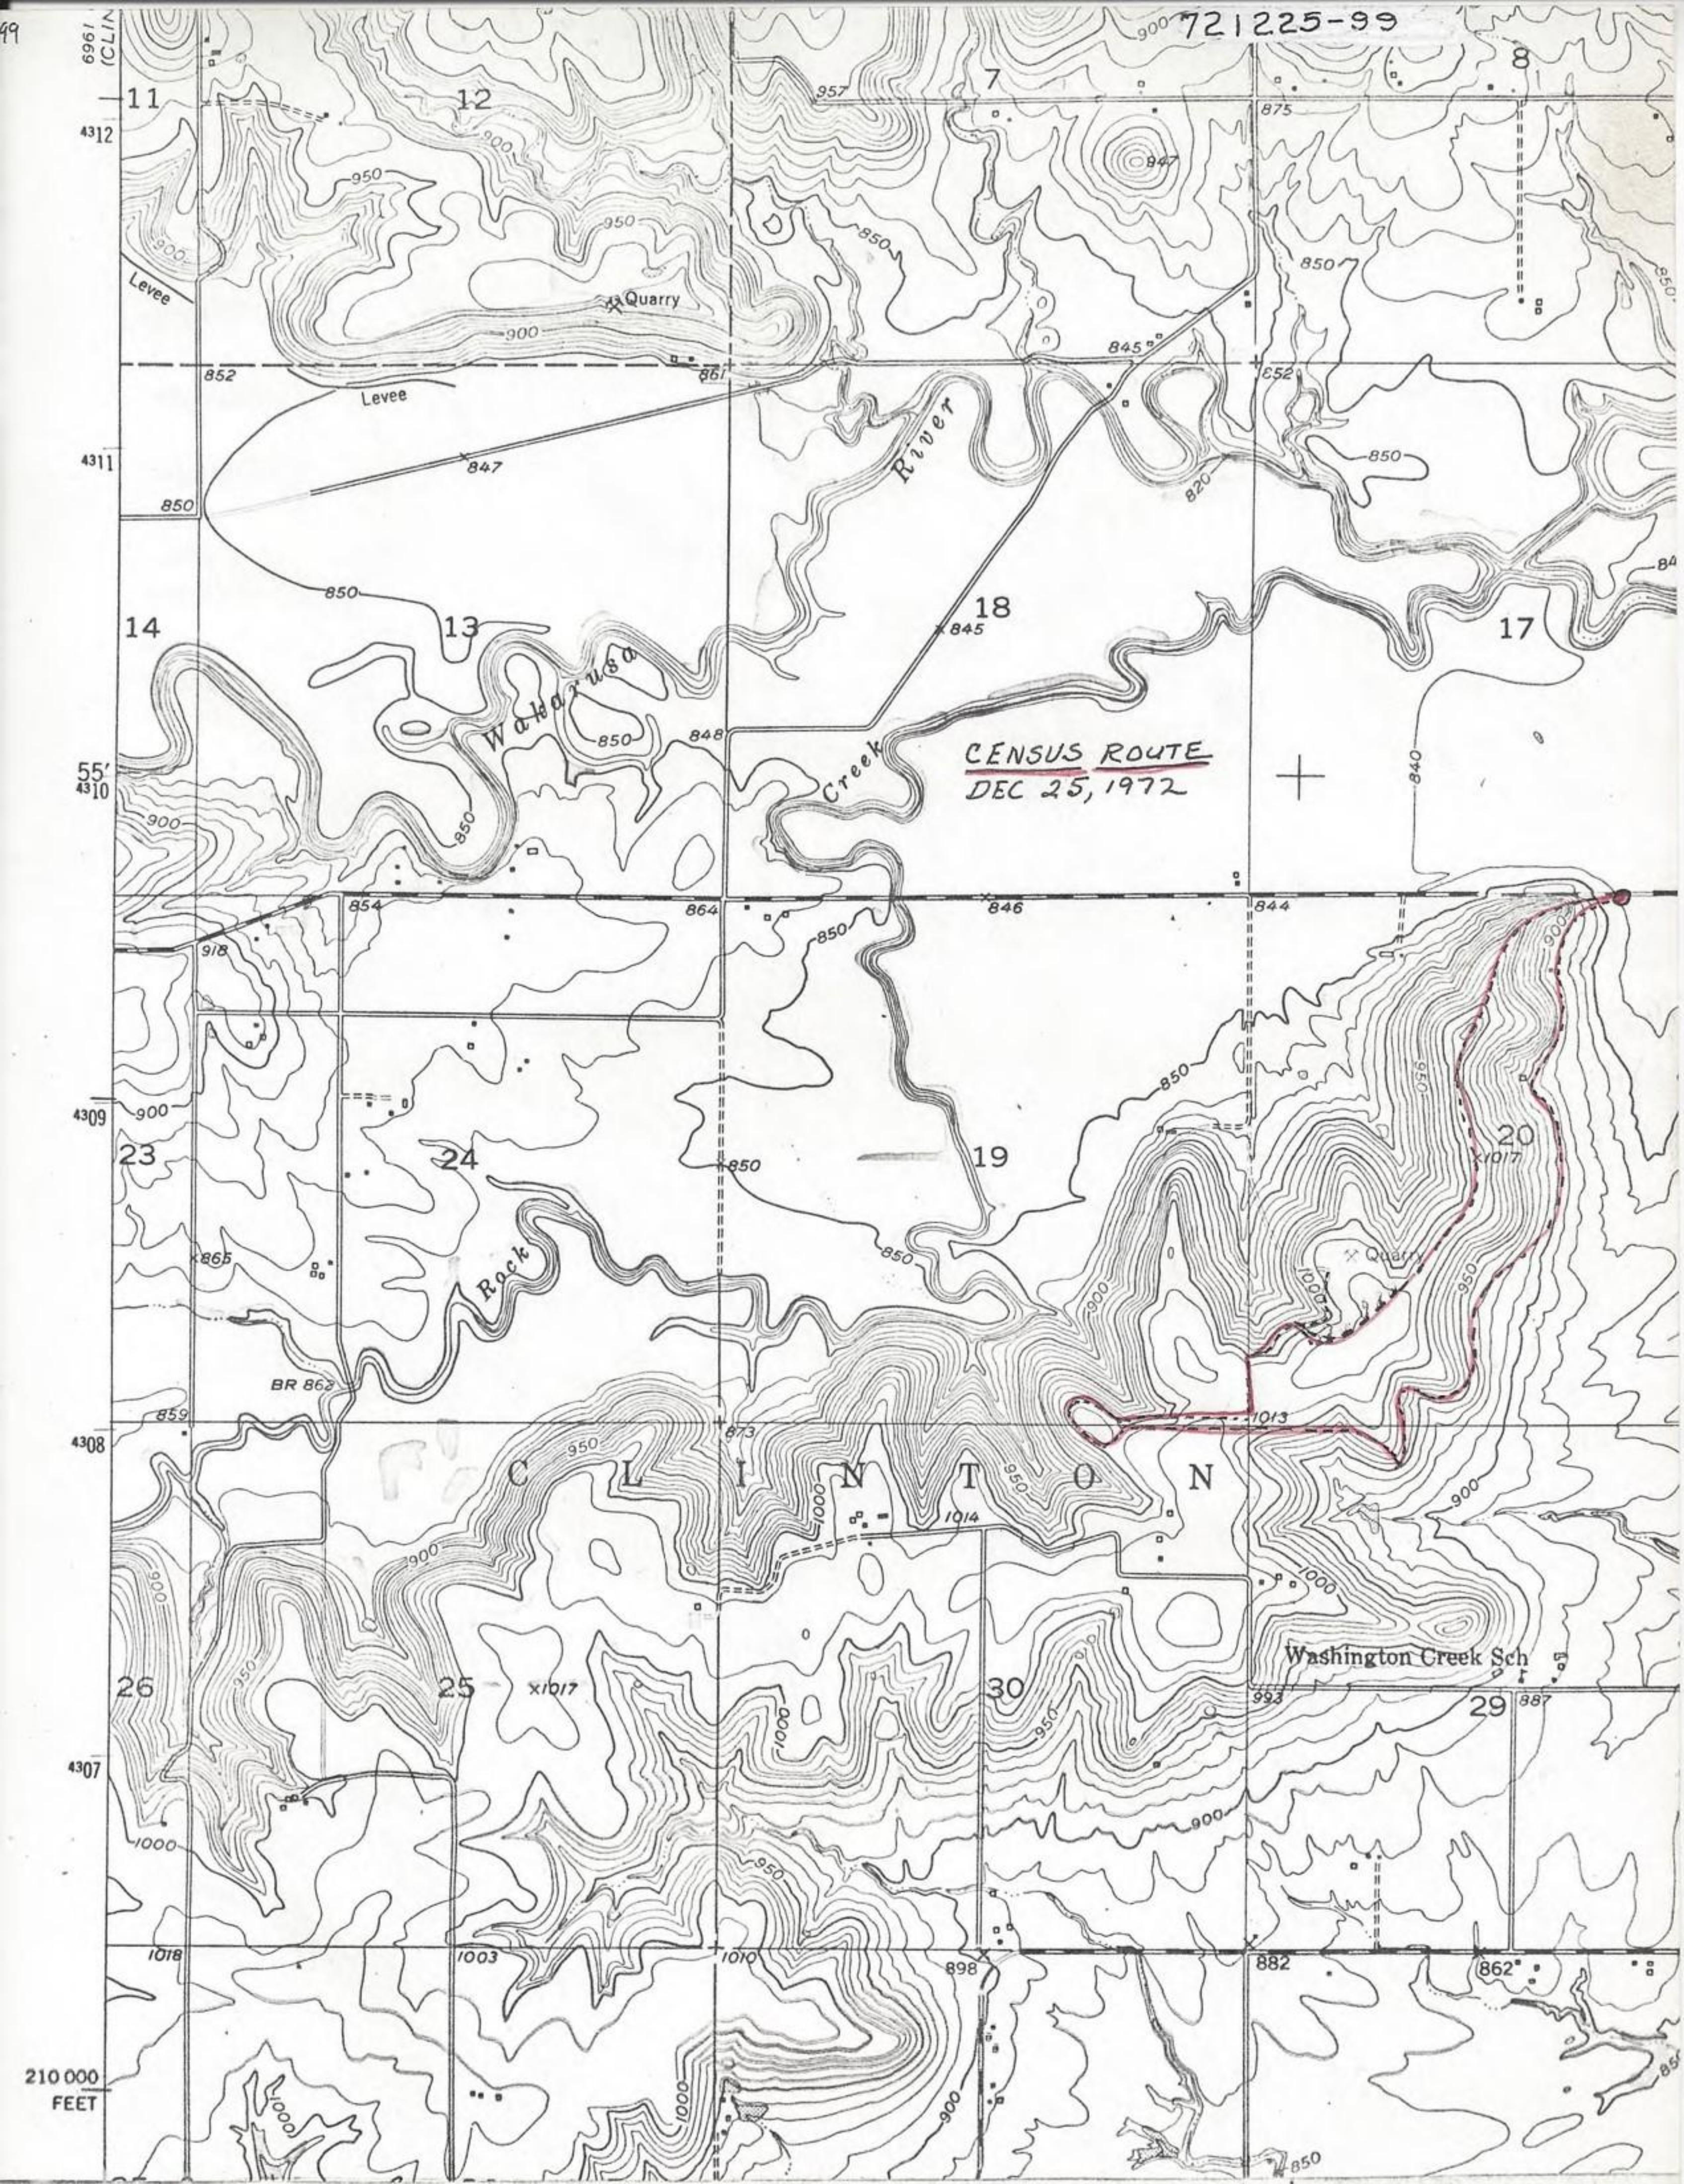

Left museum at mile 62895 at 8:40. Foggy and temp. 26°F. Robins singing on campus and have been doing so all winter. On highway 59 at Wakarusa bridge the ice is in large sheets and water 50% open. Water muddy from Clinton dam operations above. At 62903.4 at 9:05 AM at first farm house on west south side of Clinton road beyond S end of dam. Will keep complete list of birds and mammals in the area (see map). Farm house completely raised and barns and sheds partially down. Crow circling. 3 redtails, 2 of which could be Harlan's circling juniper point at South end of proposed dam. They definitely favored this area as a hunting site. 2 song sparrows and 1 savanna. 8 meadowlarks. 8:15 song sparrow. 8:20 redtail flew over and one of three from juniper point

98
 8:25 farm pond, 18 goldfinch and 2 meadowlarks. Pond frozen. 10 slate colored juncos fed in weeds on lee side of dam. 3 crows. 8:40 now at road leading to second abandon farm house on hill, house gone and ancillary buildings nearly demolished. 2 savanna sparrow.
 8:50 above farm area. Rank grass down slope from barn. Red-headed woodpecker flew N. This area has supported Sympatrics and conditions are ideal for good populations now. Considerable activity of neotoma as evidenced by houses and eaten osage orange seeds. 9:05 point above farm and now following upper bench just below rim. 9:15 head of gulch. Great horned owl and 2 bluejays.
 9:20 crossing section road (old) just above squirrel site (see notes of several years ago) and still on upper bench.
 9:25 gashawk flew thru timber with either a squirrel or rabbit kill and flew w across canyon thru trees. 9:30 gravel pits; cottontail. On weedy knoll to right of entrance noted a flock of birds composed of 15 cardinals, 40-50 slate colored juncos, 2 titmice, 3 downy woodpeckers, 8 tree sparrows, 2 bluejays, 4 crow call beyond and one rabbit. Approx 30 more juncos beyond three gravel pit area. 10:00 top of ridge: Grass grown considerably having now sealed in cacti that was prevalent during time of overgrazing ^{Trees grown in} of area. On ridge noted 2 yellow-shafted flickers, 5 bluejays, 12 juncos. 4 Crows in area calling almost continuously to east in fields below. Continued down ridge to juniper point arriving 10:20. The three redtails were circling the point. Mockingbird & one cottontail here. East point 10:24.
 Car 10:38 A.M. 2 marsh hawks in field at base of ridge to east.

Clinton Lake, Douglas Co., Kansas
 Dec. 25, 1972

Made census of birds and mammals in ridge areas S and W of the S end of proposed dam site. Left Museum at 7:20 A.M. at mileage 62925. Wakarusa 50% open and ice sheets as barriers. Left car at base of slope on east side of ridge (see map), at 7:45 A.M. 2 Crows, 2 marsh hawks, gray squirrel, 4 slate colored juncos. Under one osage orange tree counted 80 uneaten fruits and 65 eaten fruits (tree 30' high). Most trees with fewer fruits.

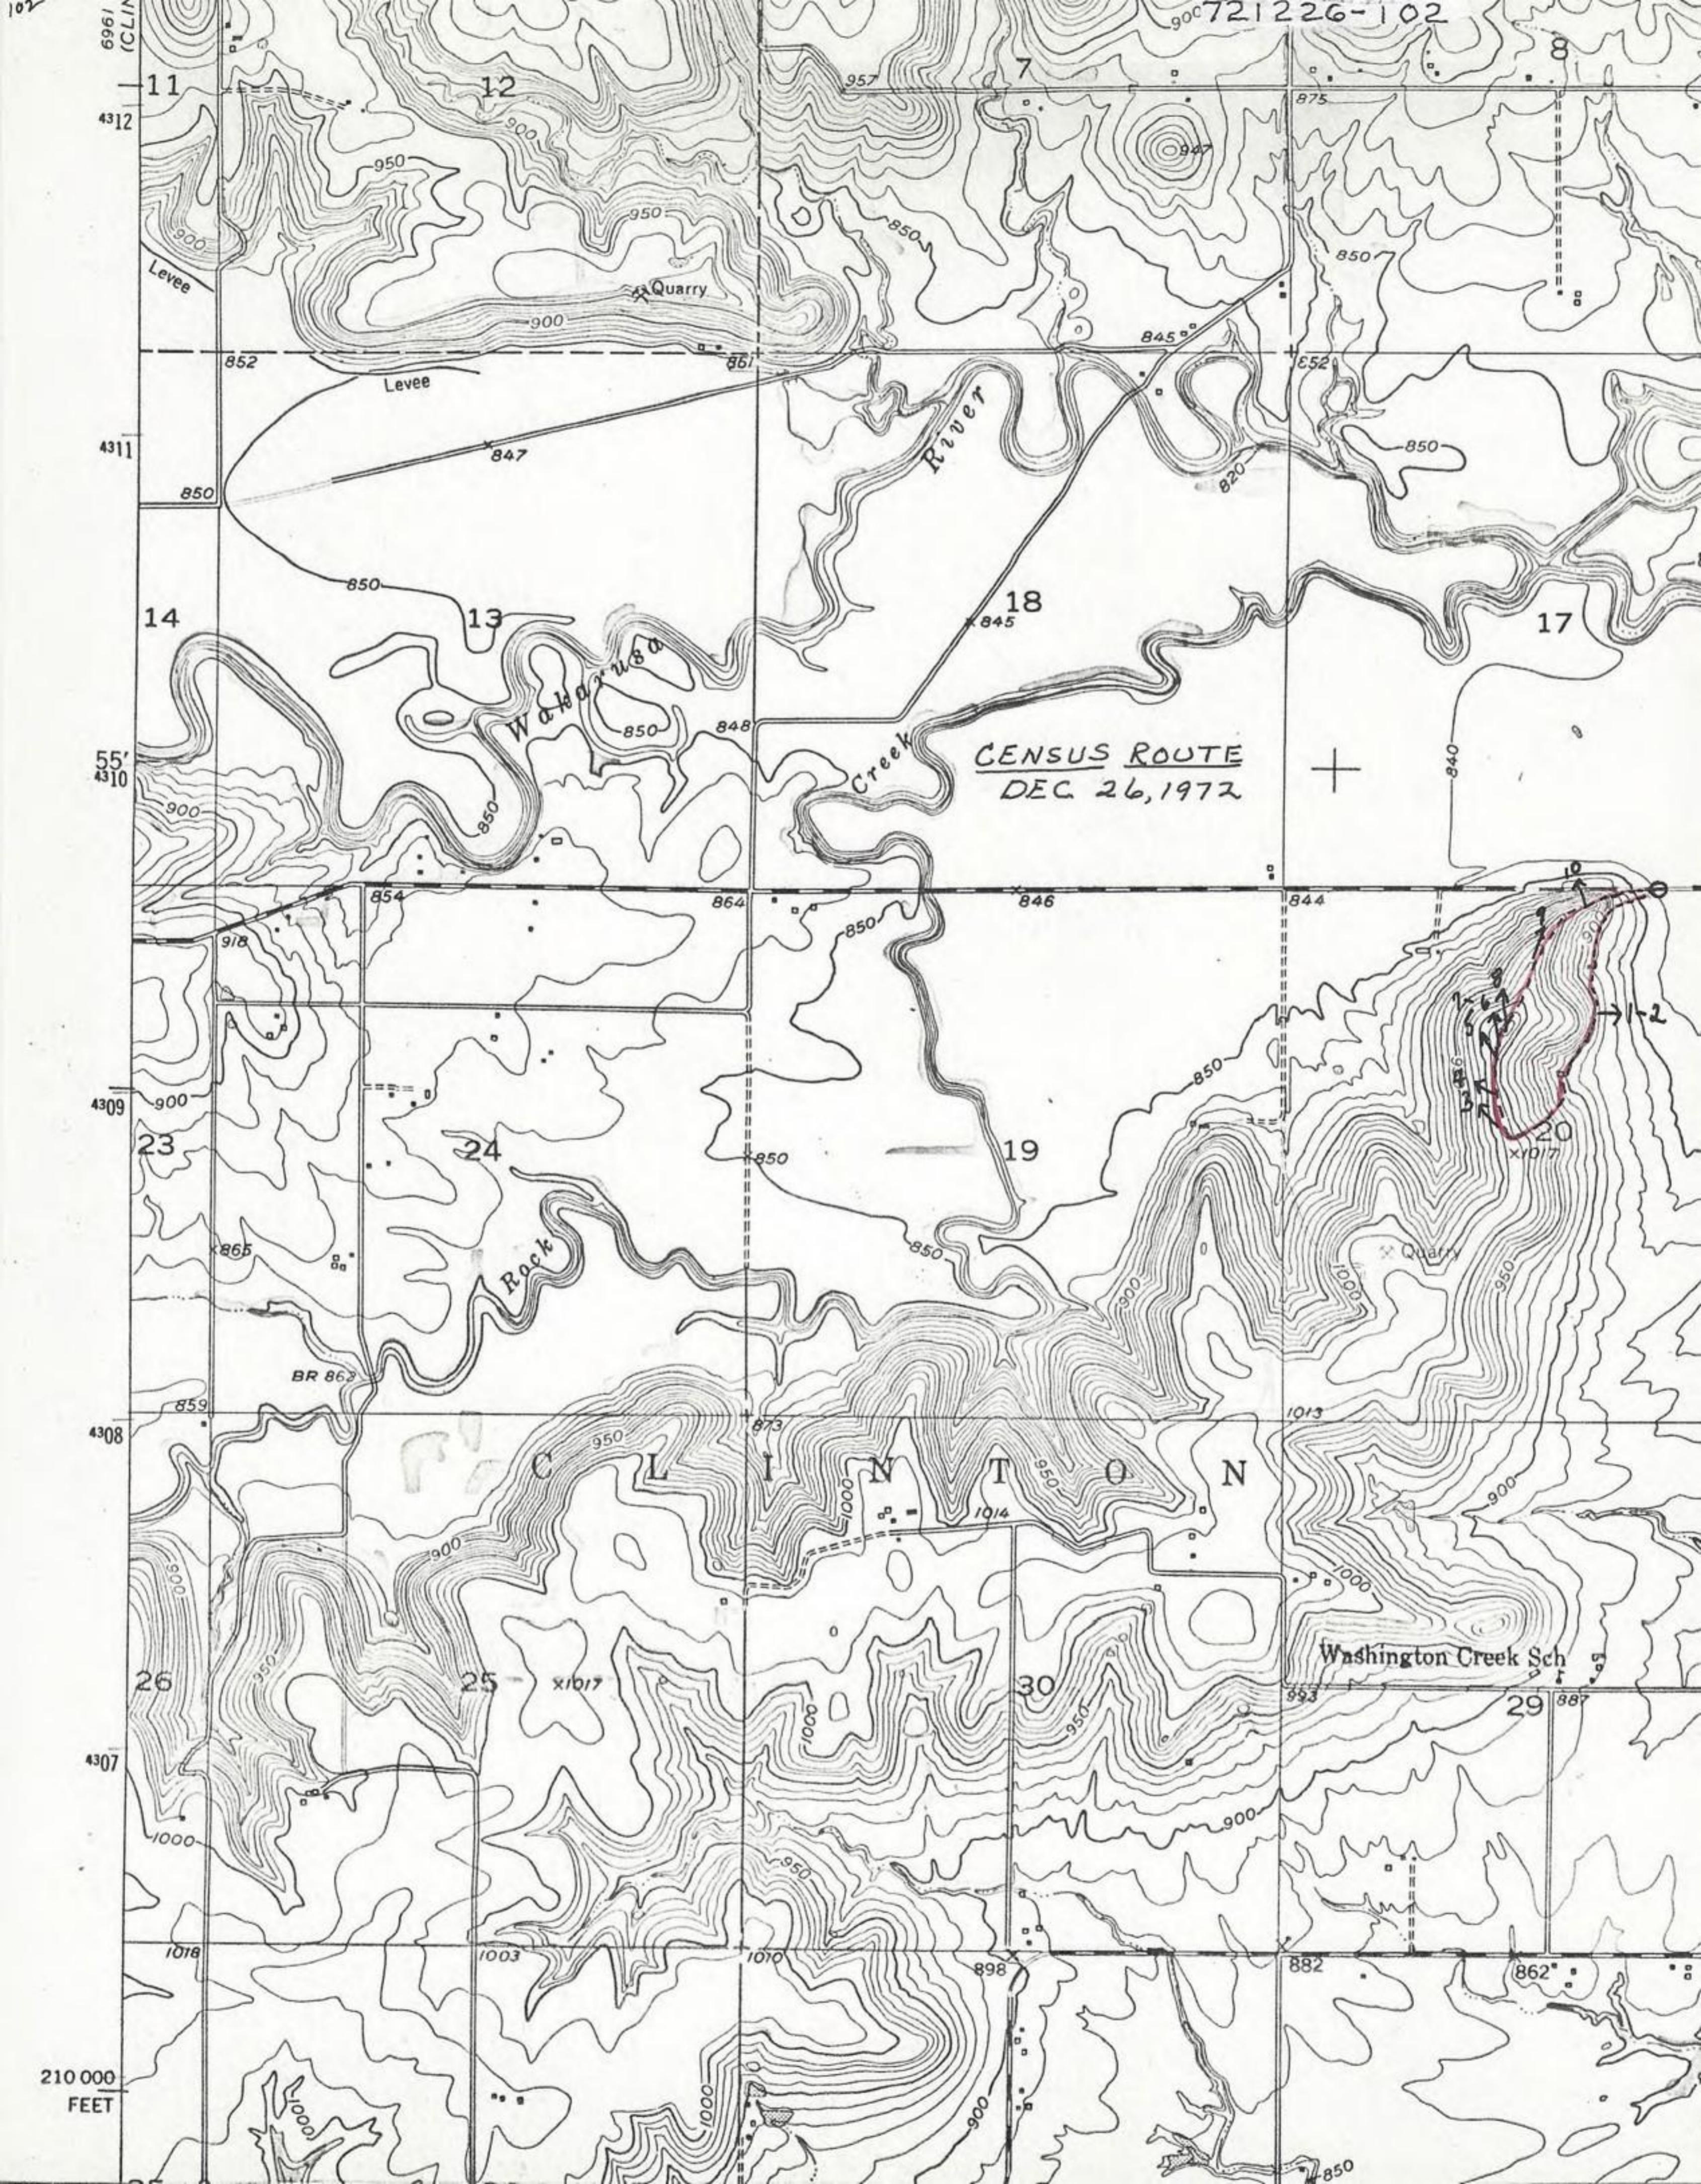

had a greater number or percentage of the fruits consumed by the neotoma. There is a high population of these animals in the area with houses of extra large size. The population has not reached the point where nests are placed in trees although a few are so placed. The state of freshness of fruits would indicate that they have been eaten for some time up to just recent consumption. Gray squirrel. 8:00 first erosional gully & shed. Barred owl left trees and was chased by 2 crows. 8:06 second erosional gully with red barn & silo. old road above (cause of erosion). In field below are two marsh hawks and one Harlan hawk. 8:16 red barn and silo. Neotoma and nest of dry fibers and another of green leaves under old wagon body a few feet from silos. Yellow-shafted flicker, red-bellied woodpecker. Because of the numerous orange orange trees there are many neotoma in area. Just beyond the silo area is a rounded knoll with a single tree with ground covered by green mosses and lichens. This condition is due to complete drainage on all sides. 4 slate colored juncos, 8:25; main hedgerow from valley to top of ridge. 2 blue-jays and 1 great horned owl. 8:30 deer tree of shredded bark. This tree is in area of Andropogon Cottontail, 2 marsh-hawks in field to east. 8:40 2 morning doves, song sparrow and mockingbird. 8:50 fox squirrel. 8:55 8 marsh hawks in field ^{directly below} ~~just N~~ of hedgerow directly W of the Wakarusa School. 2 crows resting in same field. Red-bellied woodpecker, 4 bluejays. Wind noticeable in open exposures but windless among trees. Most of the marsh hawks are hunting low but 2 are circling 300 feet above field. 9:00 fence row that runs straight S to Wakarusa school. 9:10 cottontail 9:12 Lightning Point (red limestone from burning stumps). No hawks in broad open valley below. No evidence of coyotes. The area reminds one of the treeless area to W of Topeka. (Flint Hills). 2 redtails to ^{dry} N W. Left point at 9:25. Just beyond point on W exposure noted in one group. Approx 18 Harris sparrows, 150 slate colored juncos, 80 tree sparrows, 2 downy wood-peckers, 3 black-capped chickadees, 4 white-throated

sparrows, 6 white-crowned sparrows, 3 cardinals, 1 yellow-shafted flicker, 12 bobwhite. These birds worked uphill and took 15 min for them to pass. 5 minutes later the tree & ^{sparrow} juncos returned from forested area. Up to now, on east exposures there has not been many small birds. In continuing along fence line counted 5 nest of neotoma spaced 20-20-30-50-30 feet apart. 9:50 yellow shafted flicker. 9:55 ^w end of milo field at road. Estimated in one group: 8 cardinals, 30 Harris sparrows, 4 white throated sparrows, 2 white crowned, 3 downy woodpeckers, 2 yellow-shafted flickers, 150 tree sparrows, 100 slate colored juncos, 5 song sparrows, 6 chickadees, 3 bluejays, 3 marsh hawks. This ^{is} a conservative estimate.

10:05 road running N-S. 10:30 marsh hawk, 30 tree sparrows. 10:15 bluejay, red bellied woodpecker. 10:25 point. 10:40 back to road & milo field. On N side observed a fox squirrel, 2 bluejays, 15 Harris sparrows, 2 cardinals, 12 quail, 18 tree sparrows, 60 slate colored juncos, white-breasted nuthatch. In among this group of birds in the ecotone between deciduous trees & open milo field was a sharp-shinned hawk. The small birds seemed to tolerate the predator. 11:00 field above rock quarry. Group of 30 tree and 15 juncos, 2 savannas. 11:02 beginning of ridge trail. Red bellied woodpecker, 2 bluejays, 8 juncos, 11:06 red bellied woodpeckers, 11:08 open prairie of ridge. 1 marsh hawk hunting and circling on ridge, one Warbler associated. 11:15 woodrat house in group of trees on top of ridge measuring 44" high. 11:20 marsh hawk caught a *Sigmadon* from trunk of ridge to west. Several marsh hawks hunted this area. 11:35 Juniper Point. Sharpshin Hawk here but no small birds. 11:40 most eastern point, flicker. Cur 11:45.

Clinton Lake, Douglas Co., Kansas
Dec. 26, 1972

Made census of birds and mammals in vicinity of S end proposed dam.

Mary and I left car at east side of ridge at road. 2 redtails and 3 crows in field. Photo 721226-1 of fence line trees and field below. Photo 721226-2 of erosional manmade gulch bordered by trees. Field to house will be lake area property, now in fallow fields. The marsh hawks hunted these fields. Photo 721226-3 from S end of open, ^{ridge} field showing grasslands to N. Photo 721226-4 from ridge to W. Photo 721226-5 to NW across valley now denuded of riparian forests. Harlan's marsh hawk hunted in foreground. Photo 721226-6 to N down grassy ridge. Photo 721226-7 to West. Photo 721226-8 at sign reference marker at exactly in center of dam axis showing outline of dam and beginning of sand base just beyond river. Photo 721226-9 of juniper point and E line of dam. This knoll is a favorite place for hawks to sail in up-drafts. A mockingbird and 8 goldfinches among junipers. Photo 721226-10 at most easterly point showing dam area three interlacing of trees. 8 western evening grosbeaks, 2 cardinals and 7 pine-siskins in junipers at base of ridge below point.

Lawrence, Douglas Co., Kansas

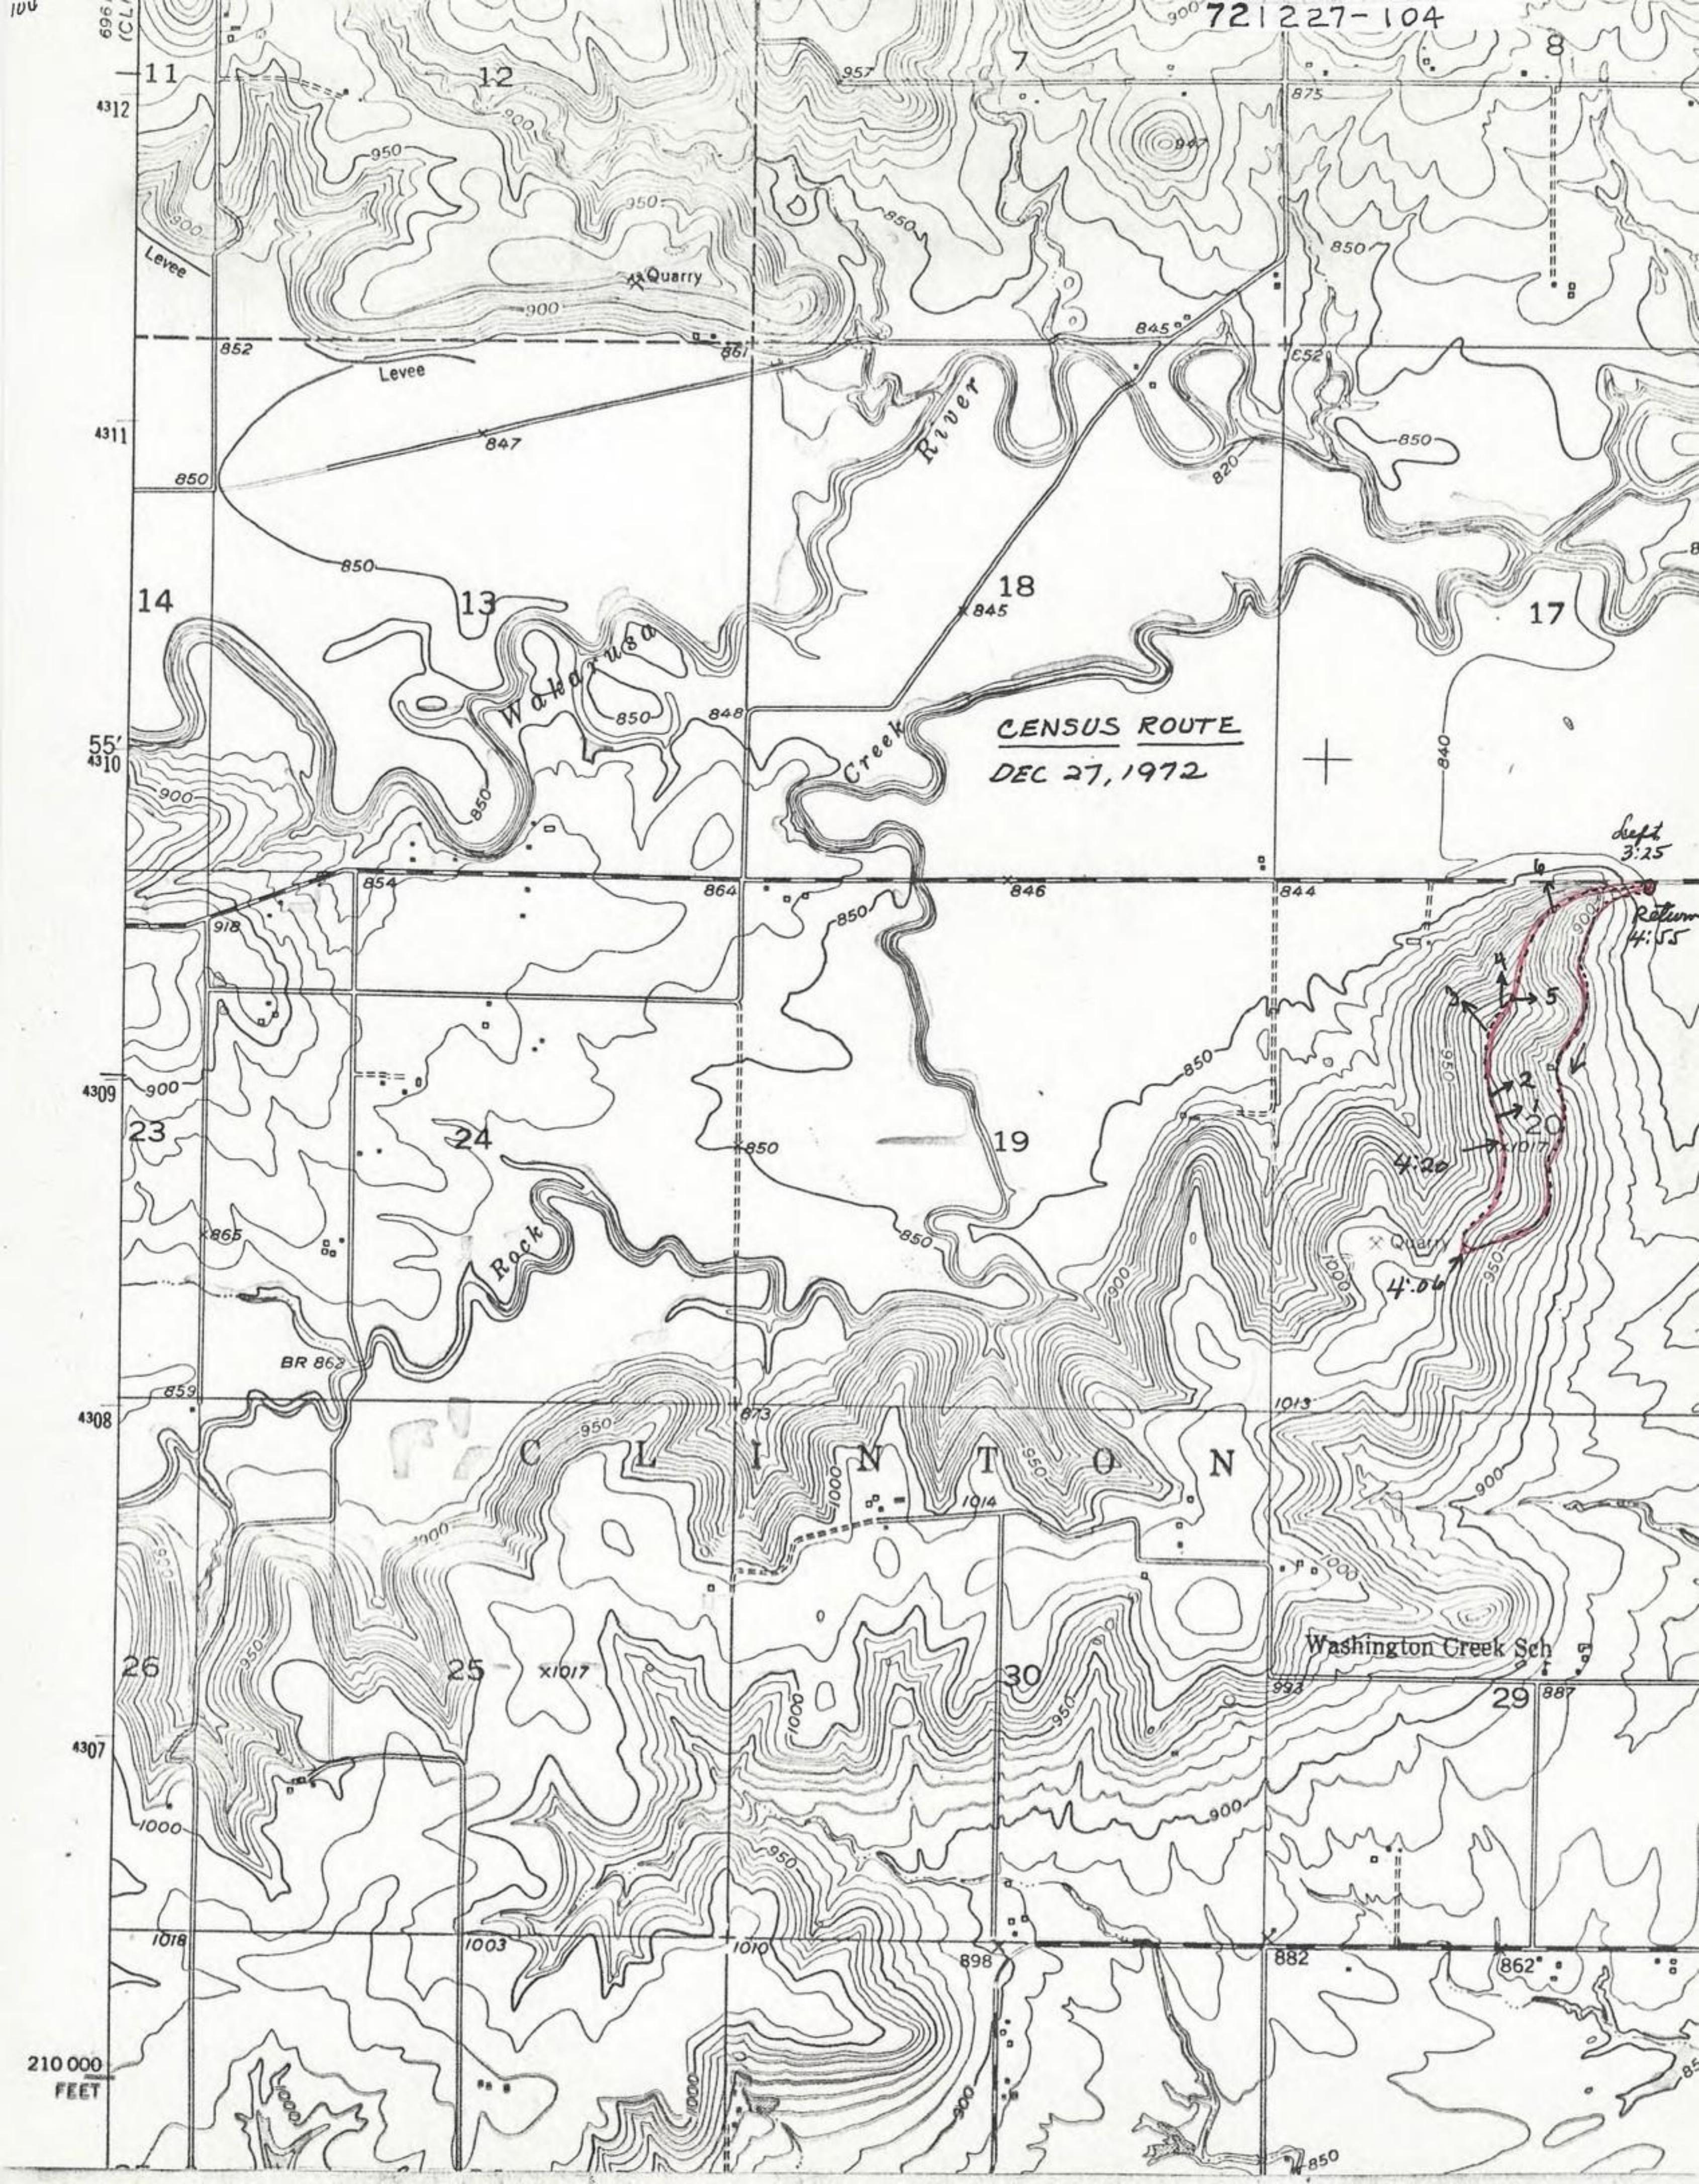

Dec 26, 1972

This year has been characterized by fewer grackles, ^{and} more redwings remaining later in season than on previous years.

Clinton Lake, Douglas Co., Kansas

Dec. 27, 1972

Annette & I made trip to ridge at S end proposed dam. Left car on east slope (see map) at 3:25 P.M. 3 redtails in field to immediate east and calling. 3:30 yellow-shafted flicker, meadowlark. 3:38 4 juncos at red barn. Woodrat under wagon bed and new nest of green vegetation. 3:46 3 juncos (all slate-colored), 4 crows. 3:55 large group small birds including 20 juncos, 15 tree sparrows, 7 Harris sparrows, 1 white-throated sparrow, 2 bluejays, 4 cardinals, 2 downy woodpeckers. 4:06 top ridge & now to N. 2 crows, redbellied woodpecker, cardinals, mockingbird. 4:20 beginning of open prairie. Photo 721227-1 to NE across prairie, Lawrence in background. Photo 721227-2 as above with rocks & pond in foreground. Photo 721227-3 to NW. Photo 721227-4 to N at axis of dam (at marker) Annette in foreground. Photo 721227-5 same area but to E with sunlight on foreground. 4:15 juniper point. Photo 721227-6 of dam area three line of trees in foreground. Short-eared owl feeding hunting below to N. 2 marsh hawks also feeding in same area. 4:55 return

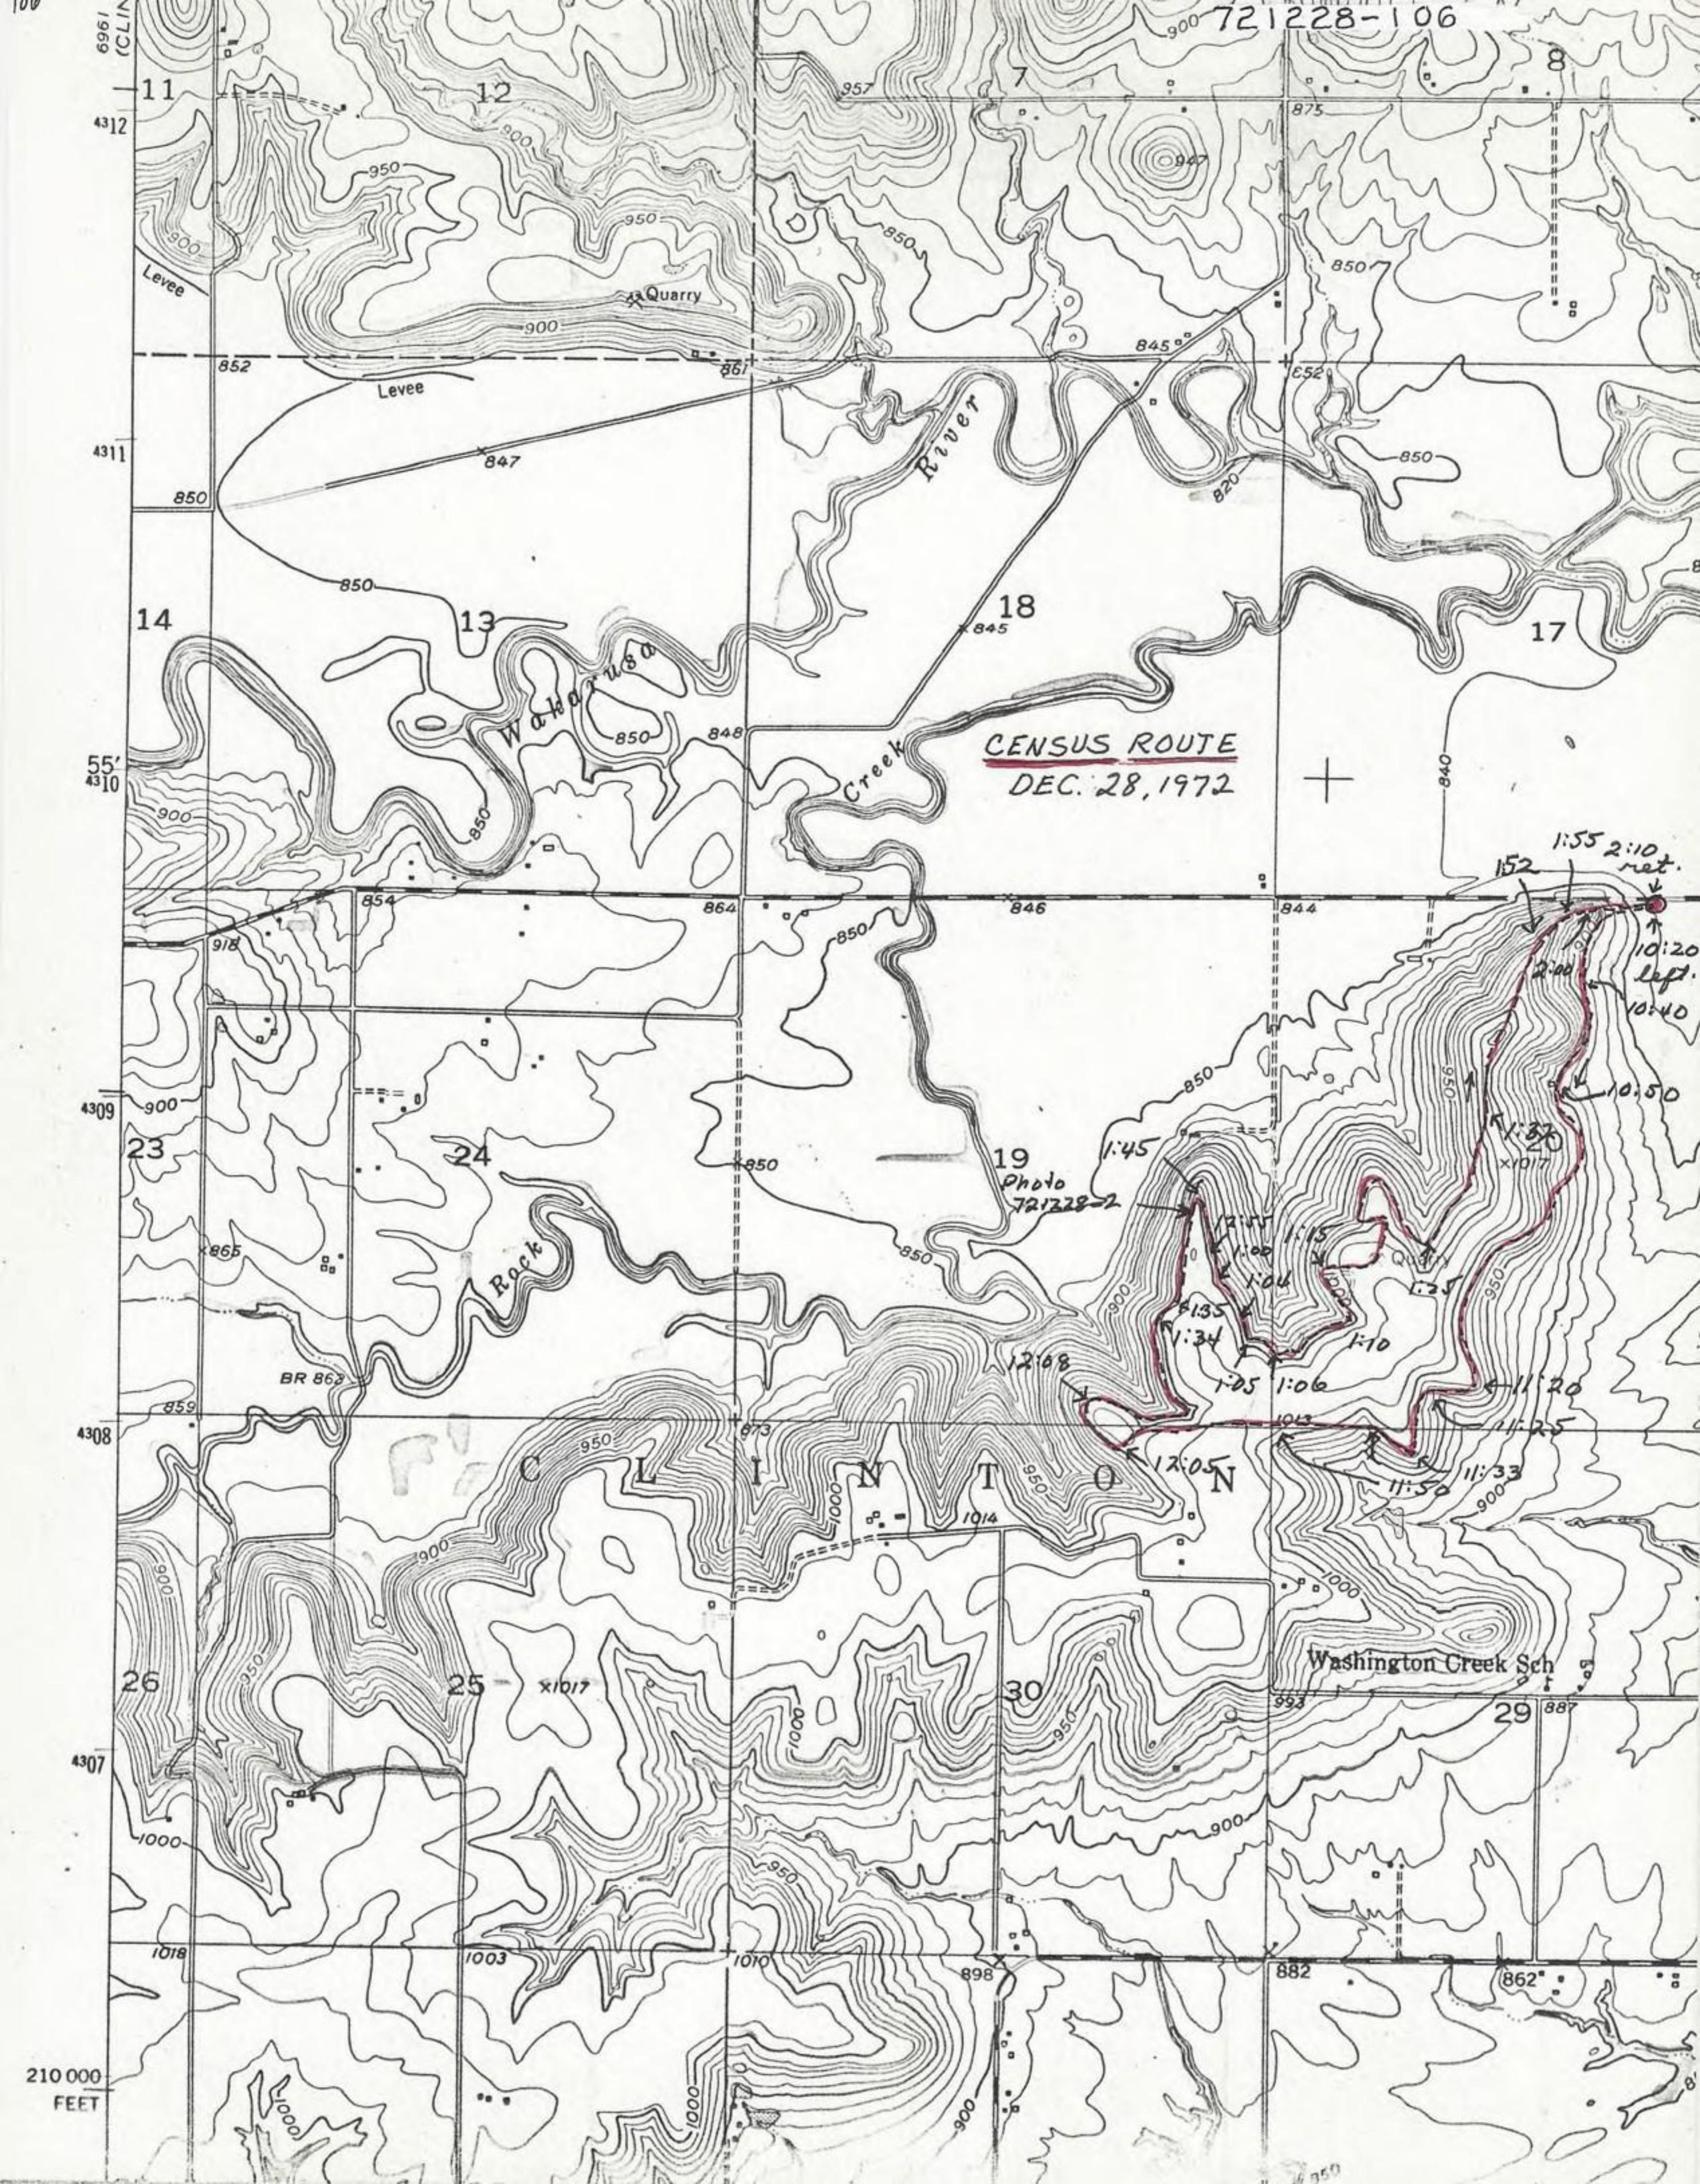

to ear. Temperature 52°F but ice frozen on exposures and among trees. A great blue heron left water near bridge on Wakarusa River below dam. The prairie ridge should be preserved as is.

Clinton Lake, Douglas Co., Kansas

Dec. 28, 1972

Made census of birds and mammals on ridge area S of the south end of proposed dam (see map). Left 10:05 A.M. from home in Lawrence at mileage 63089. Left car at dam at 10:20. Day overcast, some blue sky, slight wind. 40°F. At first contact with trees on hill found unusual blue-grey lichen on bark of trees. 2 Red-bellied woodpecker here and one grey squirrel. Will keep complete list of birds and mammals. 10:40 first drainage beyond shed. 20 slate colored juncos, carolina wren. 10:50 drainage beyond red barn and sets. 2 white-throated sparrows. 11:00 graded road to top. 3 cardinals, 18 slate-colored juncos, 5 tree sparrows, 3 bluejays, mockingbird in one group. 2 Crows below in field. 11:07 5th minor drainage. Cottontail, crow. 11:10 7th minor drainage. 5 black capped chickadees. 11:13 8th minor drainage and supporting flowing water. Bluejay. 11:20 point. 3 redtails circling above and thence to ridge to W. usual complement of birds consisting of approx 150 tree sparrows, 80 slate-colored juncos, 18 Harris sparrows, 3 cardinals, 2 downy woodpeckers and 2 cottontail rabbits. Continued, went and at 11:25 at drainage. many large Neotoma nests. Considerable dampness in soils. Marsh hawk. 11:30 rock fence line and open beyond. 11:33 Lightning Point. 3 redtails of above moved W to next ridge and remained together and called. Cottontail, 20 slate-colored juncos. 11:50 road near drainage to lakes below. Along here in loose aggregate noted 40 Harris sparrows, 12 black-capped chickadees, 1 brown creeper, 80 tree sparrows, 8 song sparrows, 1 carolina wren, 12 meadowlarks, 3 bluejays, 1 fox sparrow, 3 white-throated sparrows, 1 white crowned sparrow, 3 downy woodpeckers, winter wren. Many Neotoma nest along hedgerow to W. 2 Bluejay, black-capped chickadee. 12:05 N end of ridge to W. where rock fence runs down slope 12:08 most northern point of ridge. Photo 721228-1 of a red fungus and green moss. 1:34 minor Point 1:35 minor drainage 2 crows. 1:45 major Point above farm below. Photo 721228-2 of locust tree holding ledge of rock. A neotoma nest under ledge. This ledge has been previously named (earlier notes) and is near point. motorcycle trails have been recently developed in this area and trails

have been cut thru forests and on top of ridge. This would be a violation of land use of the Clinton area. These ^{motor} cyclists must be provided with a recreational area, confined and especially planned for their use. Mufflers must eliminate noise of used in connection with Clinton Lake area. 12:55 old road grade up W side drainage. A vine leaf (?) is still bright yellow and alive. 1:00 first major drainage. 1:04 old road bed and 2 double wire fence line on each side of road. 1:05 W drainage head (double) 1:06 road from S that leads to gravel pits. Birds rare today except as in groups. 2 bluejays. 1:10 5th drainage. 1:15 entrance gravel pits. In the area of the gravel pits are 18 tree sparrows, 30 juncos, 2 cardinals, 1:25 head drainage. On ^{main} ridge noted 2 cottontails, 3 crows, 6 bluejays, 2 yellow-shafted flickers, 2 Cardinals. 1:32 open field. Overcast of sky complete (no blue). marsh hawk. 1:53 S end dam marker. 1:55 Cedar Point. mockingbird, cottontail. 2:00 most eastern vantage point. 2:10 ear.

Clinton Lake (at S end proposed dam), Douglas Co., Kansas

Dec. 30, 1972

Annette P. and I to south side of proposed dam for photographs.

721230-1 Annette N end ridge with some area of proposed dam and juniper Point to right.

721230-2 Grass and to east from ridge.

721230-3 as above but highlights in foreground.

721230-4 Annette and I along axis of dam from marker.

721230-5 To north near axis of dam.

721230-6 Interlaced trees and dam site to N. from Juniper Point.

Last night thunderstorms, thunder and lightning with temp 40° F. At midmorning today temp down to 33° F.

Lawrence, Douglas Co., Kansas
Dec 31, 1972

Left for Provo, Utah at 10:30 A.M. at mileage 63167. Mary and Annette preceding by one week. The Datsun broke a crank shaft at Vona, Colorado and they continued by bus to Mary's. Temperature in Lawrence 24° F. Clouds 40 per cent with blue sky between. Wind from North. At 175 sparrow hawk. As is customary will keep list of all raptors and complete list of all birds at desegregated areas. 183 sparrow hawk. 192 main highway leading off Topeka avenue, 10:55. 203 sky clearing and 10° in clouds. No snow, even on exposures but ice on water. 205 redtail hawk. 208 at 11:12 Wabunsee Co. line. 201 sparrow hawk. Grasses of Flint hills reddish with some yellow. Birds seen since Lawrence are cardinal, starling, Eng. sparrow, grackle, meadowlark. High wind from NW keeping birds low. Swift flying creeks open, no snow. Grasses in Flint Hills does not appear to be as heavily grazed as in previous years. 215 Coyote roadkill. 221 first horned lark. 11:31 Clouds about 1 per cent. Areas of limestone, green clay and a variegated red in road cuts up to 241. 242 redtail. 245 sequence of rocks the same as above. 248 redtail. 249 3 redtails sailing above ridge E of airport using updrafts. 253 Smoky Hill River, open, no snow in area and water muddy. ^{small} Birds have been virtually absent from Lawrence to here. 254 2 redtails. Eptd 296 at ²⁵⁵ 2:05 256 redtail on post. Travelling along lee side of ridge produces very irregular currents. 260 marsh hawk. 262 entering Slickison Co. Sky now 100% clear of clouds at 12:14. 264 redtail hawk on post. 267 redtail on post. 275 first evidence of snow cover and this from yesterdays snow and preserved on exposures. 276 Abilene at 12:28. 279 redtail. Snow cover increasing but still only a trace. In last 20 miles Andropogon in hummocks rather than generally distributed as is the case farther east. Decided increase in meadowlarks since Junction City. 285 entering Saline Co at 12:37. 286 redtail at Solomon River. No snow but considerable ice in fields like spring flood. 288 mallards flying in distance 291 redtail. 294 sparrow hawk. 296 Saline River at 12:49 297 81 south at Salina. 302 redtail on post. 304 redtail in tree in protected area. 314 entering Lincoln Co. trace of snow.

100

318 redtail in tree. 321 snow general and approx 1 inch entering Ellsworth Co. 323 redtail. 328 snow on shoulder of road for first time, 2 crows. 332 Vesper turnoff. There have been no meadowlarks on shoulders of road since Lawrence. Snow drifts from clear fields (plowed or closely grazed), elsewhere no drifts (tall grasses). 342 road kill horned owl at 232 highway (Lucas, Wilson) 343 entering Russell Co at 1:39, redtail. 350 sparrow hawk. 358 redtail. 359 Russell exit. 363 junction of 381 highway. 371 redtail. 372 entering Ellis Co.. 382 redtail. 386 2 crows. At Ft Hays exit at 387 at 2:40 400 2 redtails 401 E ellis. redtail, sparrow hawk. 402 ^{SP?} Sedal Co. at 2:55. There is less snow here than 50 miles to E. 407 redtail. 413 first pheasant. 414 redtail. 418 junction 283 Wakeeney. Definitely less snow than to east. 426 marsh hawk. 431 American roughleg. 434 marsh hawk. 438 Quinter at 3:38. No jackrabbit along route. Snow cover decreasing except for drifts. 451 Grenfield 3:45. 453 marsh hawk. 468 entering Logan Co. 469 entering Thomas Co., 469 first noticeable yucca. 487 marsh hawk, striped skunk road kill. 489 Atwood, Colby turnoff at 4:27. Will keep complete census of meadowlarks and horned larks. 490 redtail. High cirrus and lower clouds approaching to W. 498 redtail, 4 horned larks. 507 Sherman Co., 2 horned larks. 511 3 horned larks. 515 Edson turnoff and end of above census. 520 approx. 150 horned larks. 524 Goodland turnoff at 5:06. Sun within 30 min of setting. 541 Kansas State line at 5:23 Central time (will change to mt time at 4:23).
