

This mound is just beyond Overlook and to the SE some 40'. It overlooks Delaware valley & Kaw Valley at a most advantageous position.

a trench has been dug across the mound and a pot hunters hole near center. At approx 1/10 mi W of this site at edge of forest, ^{2:00 P.M.} on S slope flushed a chuck-wills-widow and

1 of her two young. The first bird that left the ground was the adult that flew 20' and alighted 20' away. It rolled and demonstrated injured behaviour on the ground and then flew into tree some 100' beyond. This adult bird remained in area the entire time and came as close as 25' and as far as 70', chucking at all times. At the fall of the young which I held in my hand the adult would come nearest and usually present injured behaviour. When standing upright the wings would point slightly forward and the tail appeared unusually long. ^{one of} The young flew 25' at the time the adult left, and alighted on ground. It flew 3 times for this length of flight (25' each time) but remained still on the fourth approach. It opened wide its mouth when touched. The second young remained crouched at all times until picked up. It could fly but not as good as the other young. The young when pursued hop rhythmically with a ~~rhythm~~ ~~rhythm~~ rhythm regardless of obstacles or barriers. The wide mouth is used as a defensive behaviour. The young measured (total length) 147 mm

In lake along dam caught approx 50 fish with fly and they included bass, bluegill, green sunfish (all small).

Perry Reservoir, Jefferson Co., Kansas

June 29, 1972

Fished curve of W end of dam from 200' beyond curved (east) to point where shore contacts north hillside, starting at 5:30 P.M. at hillside shore. Fish record consecutively and by length. greenfish 130, greenfish 85, bluegill 115. 6:15 P.M. loop at head. bluegill 120, 6:45 P.M. bluegill 108, bluegill 112, end of line at 7:00 P.M. Breeze audible, waves slight, sky clear, sun at 7:00 1 hr from ridge.
