

major problems. Robins still most common bird. A few gulls along shoreline. At Saint Barbe put trailer and car on ferry. Car wheel (right rear left plank and back of trailer dinged on rear bumper. Reconnected trailer and put new inclined ramp for car and with all personnel available pushed car on ferry.

Black and tackle pulled trailer on ship. Car had flat tire on board. Captain and crew complained that

government had forgotten the people and facilities in Labrador and realized the loading system for trailers was inadequate. An ship took photos:

720731-2 of Anchor Point to right as we left the harbor. for 720731-2a-b-c. see April 13, 1973

720731-3 of car & trailer on board.

720731-4 ibid

720731-5 group of passengers, most young people from the more western provinces.

720731-6 Annette and Canadian flag

720731-7 Cashes kitchen and sea thru parthale

A large whale?, 20' or so surfaced & blew air. Two others were observed about 1/2 way across straits. A sooty shearwater flew by. It flew <sup>from</sup> about 40' to water surface and weaved back & forth. Its behaviourism is entirely different than gulls. Arrived Blanc Sablon (2 hr trip) and continued to approx. 2/10 mile east of the village on the high promontory where we camped, overlooking the marine waters for approx. 200 degrees. Photo 720731-8 to S across beach. This slope is soft to walk on and sinks about 6 inches when walked upon. 720731-9 of trailer with water west of area. Photo 720731-10 to E in over line into Labrador showing several sets of elevated marine terraces. Several thousand gulls were generally distributed in the bay below. Larger aggregates in water near fish activity. 2 roven on beach. and horned larks in foreground. The great black-backed gull, herring gull, ring-billed and black-legged kittiwake? in area. arctic tern frequently observed.

Set 100 traps this evening, one group of 50 <sup>13/10</sup> 8/10 mi. S in Labrador and 50 <sup>2/10 mi S</sup> 4 mi W. L'Anse-au-Clair Blanc Sablon, Quebec. Camp is almost on the provincial line. The Quebec set was mainly scaled krumholz on slope above cliffs while the Labrador was, although similar, was associated with water course from springs. Both sets were completely scaled with vegetation of herbs, limfers etc.
