On a sandbar and in shallow water on S side of river south of easternmost collecting area were approx. 1000 ring-billed gulls resting. These gulls fed at the Lawrence Sanitary landfill and rested in river between feedings. It would be interesting to find out their schedule. At the landfill there would be 3 or 4 hundred gulls in air above the refuse being dumped by the garbage trucks. On the river were 6 godwit ducks, 1 lesser yellowlegs and 2 cranes, the latter associated with the gulls.

Perry Reservoir, Jefferson Co., Kansas
 March 29, 1977

It was reported that there were 150 pelicans N of Paradise Point in shallow water on N side of bay.
