

Dungeness County Park, Clallam Co., 100 ft., Washington  
August 9, 1978

From 10 traps set at lump in second-growth, mainly willow and thick ground shrubs:

- 780809-1 *Eutamias townsendi* 240-111-35-21-73gms. ♂ testis 5mm
- 780809-2 *Peromyscus*. 167-80-18-16-19gms. ♀ 3x3 emb 3mm
- 780809-3 *Peromyscus*. 167-77-19-16-18gms ♂ testis 9mm

Caught a *Pipilo erythrophthalmus* in trap. total length 211 mm, weight 40gms. Others seen in area. The most unusual feature in area was the pattern on sandy beach at base of high, unconsolidated cliffs overlooking the straits to W.

These islands of sand and gravel on beach extended along base of bluffs to a far N as one could see or to spit and they had a regularity along the entire stretch of beach

Some variation in sand islands:
